## **FINDINGS AND CONCLUSIONS**

EFI has performed a Phase I ESA in conformance with the scope and limitations of ASTM International E1527-21, at 2321, 2325-2327, 2331-2335, and 2335 North Fairview Street, Burbank, California, the Subject Property. It is EFI's opinion that no exceptions to or deletions from this practice that would alter the findings of this assessment were identified.

This assessment has revealed no evidence of significant data gaps, recognized environmental conditions (RECs), controlled RECs (CRECs), or historical RECs (HRECs) in connection with the Subject Property.

## **RECOMMENDATIONS**

Based on the foregoing, no additional investigation is recommended at this time.

## 1.0 INTRODUCTION

EFI Global, Inc. (EFI) has performed a Phase I Environmental Site Assessment (Phase I ESA) for a multi-family residential property located at 2321, 2325-2327, 2331-2335, and 2335 North Fairview Street, in the City of Burbank, Los Angeles County, California (the "Subject Property"; [Figures 1 through 4](#)).

This report has been prepared for the sole use of Burbank Housing Corporation (Client or User).

According to the User, the User is the owner of the Subject Property performing due diligence on the Subject Property in contemplation of a future refinance.

### 1.1 PHASE I ESA PURPOSE AND OBJECTIVES

The research conducted for this study and the report prepared are in general conformance with the United States Environmental Protection Agency (USEPA) All Appropriate Inquiry (AAI) standard and the American Society for Testing and Materials (ASTM) International E1527-21 "Standard Practices for Environmental Site Assessments: Phase I Environmental Site Assessment Process". The primary purpose for performing a Phase I ESA is to "...permit a user to satisfy one of the requirements to qualify for the innocent landowner, contiguous property owner, or bona fide prospective purchaser limitations on CERCLA liability" (ASTM, 2021). An environmental site assessment meeting or exceeding this practice and completed less than 180 days prior to the date of acquisition is presumed to be valid under this standard.

In order to maintain landowner liability protections, the User also has the following continuing obligations: "(1) No disposal of hazardous substances can occur after the person acquires the property; (2) Provide all legally required notices with respect to the discovery or release of any hazardous substances at the facility; (3) Exercise appropriate care with respect to hazardous substances by taking reasonable steps to stop any continuing release; prevent any threatened future releases; and prevent or limit human, environmental, or natural resource exposure to any previously released hazardous substance; (4) Provide full cooperation, assistance, and access to persons who are authorized to conduct response actions or natural resource restoration (including the cooperation and access necessary for the installation, integrity, and maintenance of any complete or partial response actions or natural resource restoration); (5) Comply with any land use restrictions established or relied on in connection with the response action, and not impede the effectiveness or integrity of any institutional control employed at the vessel or facility in connection with a response action; and (6) Comply with any request for information or administrative subpoena issued under CERCLA" (ASTM, 2021).

The goal of this process is to identify any (1) significant data gaps, (2) recognized environmental conditions (RECs), (3) controlled recognized environmental conditions (CRECs), and/or (4) historical recognized environmental conditions (HRECs) associated with the Subject Property. These terms as defined by ASTM are discussed below.

This investigation is not an environmental compliance audit and is not designed to determine if the operations of an existing facility are in compliance with applicable environmental laws and regulations.

- A **significant data gap** is defined as "a data gap that affects the ability of the environmental professional to identify a recognized environmental condition" (ASTM, 2021).

- A **recognized environmental condition (REC)** is defined as “...(1) the presence of hazardous substances or petroleum products in, on, or at the Subject Property due to a release to the environment; (2) the likely presence of hazardous substances or petroleum products in, on, or at the Subject Property due to a release or likely release to the environment; or (3) the presence of hazardous substances or petroleum products in, on, or at the Subject Property under conditions that pose a material threat of a future release to the environment” (ASTM, 2021).
- A **controlled recognized environmental condition (CREC)** is defined as a “recognized environmental condition affecting the Subject Property that has been addressed to the satisfaction of the applicable regulatory authority or authorities with hazardous substances or petroleum products allowed to remain in place subject to implementation of required controls (for example, activity and use limitations or other property use limitations)” (ASTM, 2021).
- A **historical recognized environmental condition (HREC)** is defined as “a previous release of hazardous substances or petroleum products affecting the Subject Property that has been addressed to the satisfaction of the applicable regulatory authority or authorities and meeting unrestricted use criteria established by the applicable regulatory authority or authorities without subjecting the Subject Property to any controls (for example, activity and use limitations or other property use limitations). A historical recognized environmental condition is not a recognized environmental condition” (ASTM, 2021). The HREC designation requires the comparison of residual contamination concentrations, if any, to current regulatory standards.
- A **de minimis condition** is defined as “a condition related to a release that generally does not present a threat to human health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies. A condition determined to be a de minimis condition is not a recognized environmental condition nor a controlled recognized environmental condition” (ASTM, 2021).
- A **business environmental risk** is defined as “a risk which can have a material environmental or environmentally-driven impact on the business associated with the current or planned use of commercial real estate, not necessarily related to those environmental issues required to be investigated in this practice” (ASTM, 2021).

In order to identify environmental conditions at the Subject Property, the Phase I ESA includes a site inspection, interviews with parties familiar with the Subject Property, historical research into the past uses of the Subject Property, and an environmental records search with regard to the Subject Property, adjoining and immediately surrounding properties, and the surrounding area. In addition, EFI provides an opinion regarding the potential for non-scope considerations including but not limited to asbestos containing materials, lead-based paints, mold, radon, methane, and wetlands as they relate to the Subject Property.

## 1.2 SIGNIFICANT ASSUMPTIONS

While this report provides an overview of potential environmental concerns, both past and present, the environmental assessment is limited by the availability of information at the time of the assessment. Conducting interviews with knowledgeable parties and reviewing those documents that

are publicly available, reasonably ascertainable, and practically reviewable controls the completeness of this assessment. The inability to review documents which do not exist or are not publicly available, reasonably ascertainable, or practically reviewable may result in a data gap. Further, it is assumed the records provided by various data sources inquired with during the preparation of this report, including but not limited to public agencies, constitute all responsive records for the Subject Property within the respective data sources' repositories.

This assessment has been conducted, in part, based on information, data or reports provided or prepared by others. EFI reviews and interprets these documents in good faith and relies that the provided data and documents are true, accurate, and complete.

### 1.3 LIMITATIONS AND EXCEPTIONS

This report has been prepared in accordance with generally accepted environmental methodologies and practices referred to in ASTM E1527-21 and contains all of the limitations inherent in these methodologies. No environmental site assessment can wholly eliminate uncertainty regarding the potential for recognized environmental conditions in connection with a property. Performance of this practice is intended to reduce, but not eliminate, uncertainty regarding the potential for recognized environmental conditions in connection with a property, and this practice recognizes reasonable limits of time and cost. The possibility remains that unreported disposal of waste, chemicals, or other materials, or other activities impairing the environmental condition of the Subject Property may have occurred which could not be identified.

Certain environmental conditions are impossible to visually identify; their presence can be verified only by testing and analysis. EFI can make no direct inferences as to the subsurface conditions at the Subject Property based on the Phase I scope of work, which does not include a physical investigation of the subsurface. Conditions other than those observed may exist in inaccessible or unobserved areas of the Subject Property. During site reconnaissance, materials identified on the Subject Property were not disturbed and underlying conditions were not observed. The findings of this report cannot be extended to portions of the Subject Property that were not directly observed.

This assessment is limited by the availability of information at the time of the assessment. The conclusions and recommendations presented in this report are based on EFI's professional judgement. Nothing in this report, including but not limited to EFI's conclusions and recommendations, should be considered or construed as legal advice. Unless otherwise stated in the report, third-party liabilities have not been assessed within the scope of work.

Unless otherwise stated in the report, environmental conditions at the Subject Property were assessed assuming the Subject Property use remains the same, and no redevelopment or new construction occurs at the Subject Property. Should there be a substantial change in the functional utilization of the Subject Property, or if additional improvements are planned, the conclusions presented herein may not be valid.

No warranties, expressed or implied, are made as to the professional services provided under the terms of EFI's contract(s) or specified in this report. Further, EFI cannot warrant against undiscovered environmental liabilities. Environmental conditions at the Subject Property were assessed within the context of EFI's contract(s), the scope of work authorized by the Client, and existing environmental regulations of applicable jurisdiction(s) as of the date of the report.

Regulatory requirements, regulations and guidance are subject to change subsequent to the date of the report. Unless otherwise stated in the report, evaluating compliance of past, present or future owners or operators with applicable local, provincial and federal government laws and regulations

was not included within the scope of the assessment. Unless otherwise stated in the report, this assessment did not include a review or audit of operational environmental compliance issues, or of any environmental management systems (EMS) that may or should exist on the Subject Property.

All components of this report, including but not limited to text, signatures, certifications, figures, tables, attachments, appendices, supporting documents and addenda, are integral to the reporting of the assessment. Certain portions of this report, particularly tables and figures, may utilize color to fully convey technical information. This report may not be reproduced, except in full, without written approval of EFI.

#### **1.4 RELIANCE**

All reports, both verbal and written, are for the sole benefit of Burbank Housing Corporation. This report has no other purpose and may not be relied upon by any other person or entity without the written consent of EFI. Either verbally or in writing, third parties may come into possession of this report or all or part of the information generated as a result of this work. In the absence of a written agreement with EFI granting reliance rights, no third parties shall have rights of recourse or recovery whatsoever under any course of action against EFI, its officers, employees, vendors, successors or assigns.

Reliance is provided in accordance with EFI's Contract and Terms and Conditions executed May 1, 2024 which authorized this assessment.

#### **1.5 USER'S RESPONSIBILITIES**

The USEPA AAI and ASTM International E1527-21 Standards describe tasks to be performed by the User or on behalf of the User seeking to qualify for CERCLA liability. A User may include, without limitation, a potential purchaser of Subject Property, a potential tenant of Subject Property, an owner of the Subject Property, a lender, or a property manager. These tasks include the following:

- The User should obtain and review Land Title Records and Judicial Records for Environmental Liens and Activity and Use Limitations (AULs) by relying on Transaction-Related Title Insurance Documentation Such as Preliminary Title Reports and Title Commitments or Title Search Information Reports Such as Condition of Title, Title Abstracts, and AUL/ Environmental Lien Reports. If environmental liens or AULs encumbering the Subject Property or in connection with the Subject Property are identified, the User should provide that information to the Environmental Professional (EFI).
- The User should provide the Environmental Professional (EFI) with any specialized or actual knowledge the User has with regard to RECs, environmental liens, or AULs in connection with the Subject Property.
- If the User is aware of any commonly known information in the community about the Subject Property with respect to RECs, the User should provide the information to the Environmental Professional (EFI).
- If this Phase I ESA was prepared as due diligence for a property transaction, it is the responsibility of the User to consider the relationship of the purchase price to the fair market value of the Subject Property. If the purchase price is significantly lower than the fair market value, the User should identify the alternate reason for the low purchase price if the lower

purchase price is not related to the Subject Property being affected by hazardous substances or petroleum products.

Discussion of items provided by the User during this assessment, if any, are included in Section 3.5.

## 2.0 SITE DESCRIPTION

The Subject Property is located on the west side of North Fairview Street and approximately 180 feet south of the North Fairview Street and Thornton Avenue intersection, in the City of Burbank ([Figures 1 and 2](#)).

The Subject Property is approximately 0.64 acre in size and is developed with seven multi-family structures, which are approximately 7,640 square feet in total size. The structures are currently occupied by residential tenants.

The remaining portions of the Subject Property consist of concrete-paved parking areas, accessways, and limited landscaped areas.

The surrounding area is developed with a mix of residential and commercial properties ([Figures 3 and 4](#)).

## 2.1 CURRENT AND HISTORICAL ADDRESSES

According to EFI's research and information provided by the Client, the following addresses have been found to be associated with the Subject Property: 2321, 2321 Units A to F, 2325, 2327, 2331, 2333, 2335, and 2335 Units A to E North Fairview Street, Burbank, California.

## 2.2 LEGAL DESCRIPTION

According to the Los Angeles County Assessor's Office, the Subject Property is located in the City of Burbank, and is identified by Assessor's Parcel Numbers (APNs): 2464-005-030, 2464-005-031, 2464-005-073, 2464-005-033.

The legal description of the Subject Property parcel is listed as:

- "TRACT # 9443 LOT 188" for APN 2464-005-030
- "TRACT # 9443 LOT 189" for APN 2464-005-031
- "TR=9443 LOT 190" for APN 2464-005-073
- "TRACT # 9443 LOT 191" for APN 2464-005-033

The Subject Property information is provided in [Appendix A](#).

## 2.3 PHYSICAL SETTING

The elevation of the Subject Property is approximately 669 feet above mean sea level (United States Geological Survey [USGS] Burbank, California 7.5-minute topographic quadrangle). Based on review of the GeoCheck Section of the Environmental Data Resources, Inc. (EDR) Radius Map report, the Subject Property is not situated within a 100 or 500-year Federal Emergency Management Agency (FEMA) Flood Zone.

Based on EFI's review of groundwater data presented in the State Water Resources Control Board (SWRCB) GeoTracker website, groundwater was reported at a leaking underground storage tank (LUST) site (3110 West Thornton Avenue) approximately 0.2 mile northwest of the Subject Property. According to the reviewed No Further Requirements (Soil Only), Former Lockheed Martin Building 90 Property 3110 Thornton Avenue, Burbank California, groundwater was detected in 2003 in excess of 200 feet below ground surface (bgs). However, perched and semi-perched aquifers may be present

beneath the Subject Property. Based on regional groundwater data, regional groundwater flow direction is estimated to be towards the south-southeast; however, local groundwater flow direction may vary.

### 3.0 SITE RECONNAISSANCE/INTERVIEWS

The purpose and objective of the site reconnaissance is to collect information from visual and/or physical observations. The site inspection attempts to identify current Subject Property use(s), current hazardous materials storage, evidence of past Subject Property uses, past hazardous material storage, and evidence of other RECs.

#### 3.1 SITE RECONNAISSANCE

On May 15, 2024, Mr. Tyler Derbish with EFI conducted a site reconnaissance of the Subject Property, accompanied by Ms. Sylvia Moreno, Executive Director with Burbank Housing Corporation.

The visual reconnaissance consisted of observing the boundaries of the Subject Property and systematically traversing the Subject Property to provide an overlapping field of view, wherever possible. The peripheries of the Subject Property structures were observed along with interior accessible common areas and storage areas.

The structures provide 16 residential units, of which seven units were accessed by EFI.

The following table describes the Subject Property structures and utility providers.

<b>Structure Name(s):</b>	Fairview in Burbank- <i>Seven residential and Multi-tenant residential structures</i>

### 3.1.1 INTERIOR OBSERVATIONS

The Subject Property is developed with seven structures in total:

- Parcel - 2464-005-033 consists of one single-family residence (2335 North Fairview Street) and one 4-unit multi-family residential structure
- Parcel - 2464-005-073 consists of one single-family residence (2331 North Fairview Street) and one 2-unit multi-family residential structure (2333 North Fairview Street)
- Parcel - 2464-005-031 consists of two single-family residences (2325 North Fairview Street and 2327 North Fairview Street)
- Parcel - 2464-005-030 consists of one 6-unit multi-family residential structure (2321 North Fairview Street)

EFI Global observed the interior portions of the following structures;

- Single-family residence (2335 North Fairview Street) and Unit B within the four-unit multi-family residential structure.
- Single-family residence (2331 North Fairview Street) and Unit B within the two-unit multi-family residential structure (2333 North Fairview Street)
- Single-family residence (2325 North Fairview Street)
- Units 101 and 203 within the six-unit multi-family residential structure (2321 North Fairview Street)

The interior portions of the observed structures and units consisted of three bedrooms and two baths to one bedroom and one bath units. Each structure and unit contained a kitchen area, a dining area, a living area, along with at least one bedroom and bathroom. No hazardous materials were observed in the interior portions of any of the units observed.

Two laundry rooms were observed in 2335 and 2333 North Fairview Street, each containing a washing and drying machine. No drains were observed in the laundry room areas and appeared to be in good condition at the time of EFI's reconnaissance.

No significant hazardous material storage or RECs were observed in the interior portions of the Subject Property.

### **3.1.2 EXTERIOR OBSERVATIONS**

The exterior portions of the Subject Property consist of concrete-paved parking areas, accessways, and limited landscaped areas. All of the paved concrete appeared to be in good condition with very limited cracking or staining observed.

Evidence of three former boring locations (B1, B2, and B3) were observed on the concrete parking areas. The borings are approximately nine inches in diameter, backfilled, and capped with asphalt. No documentation was located pertaining to the aforementioned borings. Given the lack of historical concerns and planned redevelopment of the Subject Property, these borings are likely for geotechnical purposes, their presence is not expected to be a REC for the Subject Property.

The electrical power in the area is supplied by overhead utility lines. Two pole-mounted electrical transformers were observed immediately adjoining to the southwest and northwest portion of the Subject Property. The transformers appeared to be in good operating condition and no staining or leaking was observed on the transformers or at the base of the utility pole. The presence of the pole-mounted electrical transformers are not expected to be a REC for the Subject Property.

Stormwater is routed to storm drains observed in the parking areas. None of the drains appeared to have any staining within the vicinity of the drain and no hazardous materials were stored in the exterior portions of the Subject Property. The Subject Property does not appear to receive significant surface water runoff from adjoining properties.

No RECs were observed in the exterior portions of the Subject Property.

### **3.1.3 SUBJECT PROPERTY AND IMMEDIATELY SURROUNDING GEOGRAPHY**

The surrounding area is flat with topographic slope to the south. No nearby hills or bedrock outcroppings were observed in the area of the Subject Property. No lakes, ponds, rivers, or streams were observed in the surrounding area.

### **3.1.4 RECONNAISSANCE LIMITATIONS**

Due to the size of the Subject Property, EFI did not access 100% of the onsite units. However, EFI was provided access to 43% of the residential units. Based on the nature of the occupancy for residential purposes, these units are deemed representative of those onsite and the lack of full access is not considered a significant limitation for this assessment.

Multiple vehicles were observed to be parked throughout the exterior concrete-paved areas; hence EFI was not able to observe the ground conditions throughout the entire exterior areas. However, based on the observed use of the exterior areas for parking purposes and the lack of evidence of any hazardous material usage on this portion of the Subject Property, this limitation is not expected to alter the findings of this report.

### 3.2 ADJOINING AND IMMEDIATELY SURROUNDING PROPERTIES

The adjoining and immediately surrounding properties (within 100 feet of the Subject Property boundary) were visually and physically observed from public right-of-ways and the Subject Property in an attempt to identify RECs. EFI's observations are summarized in the following table:

Direction	Adjoining/ Immediately Surrounding	Historical and Current Address(es)	Current Uses and Historical Uses of Concern
North	Adjoining	2337 North Fairview Street	Residential
East	Adjoining	2320-2332 North Fairview Street	Residential
South	Adjoining	2317 North Fairview Street	Residential
West	Adjoining	2318-2332 North Ontario Street	Residential

No recognized environmental conditions were readily observable at the adjoining/immediately surrounding properties.

### 3.3 SURROUNDING PROPERTY USES (BEYOND 100 FEET)

The surrounding area is developed with residential and commercial structures.

Our observations of the surrounding properties (beyond 100 feet) did not reveal evidence of potential environmental concerns such as suspect storage facilities, visible dry-cleaning or fueling facilities, or significantly stained surfaces.

### 3.4 INTERVIEWS

The purpose of interviews is to obtain information from those associated with the Subject Property to identify RECs in connection with the Subject Property.

Documentation associated with the following interviews, if any, is provided in [Appendix C](#).

#### 3.4.1 SUBJECT PROPERTY OWNER

Mr. Raha Arnold, the Subject Property owner, was interviewed during the course of the site reconnaissance conducted on May 15, 2024 and completed a survey questionnaire dated May 14, 2024. According to Mr. Raha, the Subject Property structure was constructed in the 1960s for use as residential structures. Mr. Raha was unaware of any environmental conditions associated with the Subject Property.

#### 3.4.2 KEY SITE MANAGER/SUBJECT PROPERTY OCCUPANT(S)

The owner of the Subject Property is the key site manager and was interviewed as the owner.

#### 3.4.3 NEIGHBORING PROPERTY OWNERS/TENANTS

Per ASTM, an attempt to interview neighboring property owners/tenants should be conducted when the Subject Property is abandoned and/or unsecured land, with evidence of uncontrolled access.

As the Subject Property is currently developed and utilized for multi-family residential purposes, no neighboring property owners/tenants were interviewed during this assessment.

### 3.5 USER INTERVIEW, INFORMATION, AND PROVIDED DOCUMENTS

EFI provided the User Questionnaire to Mr. Raha Arnold who is the Vice President of Operations with Burbank Housing Corporation (client). According to review of the questionnaire dated May 3, 2024, the following was determined.

AAI Standard Questions	Yes/No
Did a search of land title records (or judicial records where appropriate, see Note 1 below) identify any environmental liens filed or recorded against the Subject Property under federal, tribal, state, or local law?	No
Did a search of land title records (or judicial records where appropriate, see Note 1 below) identify any AULs, such as engineering controls, land use restrictions or institutional controls that are in place at the Subject Property and/or have been filed or recorded against the Subject Property under federal, tribal, state or local law?	Yes
Do you have any specialized knowledge or experience related to the Subject Property or nearby properties? For example, are you involved in the same line of business as the current or former occupants of the Subject Property or an adjoining property so that you would have specialized knowledge of the chemicals and processes used by this type of business?	Yes
Does the purchase price being paid for this Subject Property reasonably reflect the fair market value of the Subject Property? If you conclude that there is a difference, have you considered whether the lower purchase price is because contamination is known or believed to be present at the Subject Property?	Yes
Are you aware of commonly known or reasonably ascertainable information about the Subject Property that would help the environmental professional to identify conditions indicative of releases or threatened releases?	Yes
Based on your knowledge and experience related to the Subject Property, are there any obvious indicators that point to the presence or likely presence of releases at the Subject Property?	No
*Note 1—In certain jurisdictions, federal, tribal, state, or local statutes, or regulations specify that environmental liens and AULs be filed in judicial records rather than in land title records. In such cases judicial records shall be searched for environmental liens and AULs.	

According to the User Questionnaire:

- A Regulatory Agreement is restricting the use of the Subject Property to affordable housing. The client provided Title Reports for the Subject Property which can be reviewed below in Section 3.5.1.
- The Subject Property is currently owned and operated by Burbank Housing Corporation (client).
- The client is aware of the previous use of the Subject Property which was reported to be residential.

### 3.5.1 ENVIRONMENTAL LIEN AND AUL SEARCH

Per the ASTM International E1527 standard, the User is responsible for obtaining judicial records for environmental liens or Activity and Use Limitations (AULs) recorded against the Subject Property.

## 4.0 HISTORICAL LAND USE

A review of historical data including, but not limited to, those derived from standard historical resources and other historical sources are provided in this section. The objective of obtaining, reviewing, and analyzing historical resources is to develop a history of the previous uses of the Subject Property, adjoining properties, and surrounding area, in order to help identify the likelihood of past uses having led to RECs in connection with the Subject Property. During EFI's historical review, acute attention is paid to the Subject Property. Data relating to the adjoining and immediately surrounding properties (within 100 feet of the Subject Property boundary) and the surrounding area is reviewed to the extent that it is revealed in the course of researching the Subject Property itself.

### 4.1 TOPOGRAPHIC MAP REVIEW

Topographic maps of many portions of the United States date back to 1879 and the series of 7.5-minute quadrangles was officially completed in 1992. More than 55,000 7.5-minute maps were made to cover the 48 conterminous States. This is the only uniform map series that covers the entire area of the United States in considerable detail. Traditionally, topographic maps show both natural and man-made features. Items searched for in each topographic map included, but were not limited to: evidence of tanks, landfills, water drainage pathways, or areas which show significant evidence of fill, et cetera.

Available topographic maps dated from 1894 to 2022 were obtained from EDR and reviewed for this assessment. A summary of EFI's observations is presented in the following table.

The topographic maps are provided in [Appendix E](#).

Year	Subject Property	Adjoining Property Observations & Notable Surrounding Area Observations
1894, 1896, 1898, 1900, 1902, 1920, 1921, 1926, and 1948	Depicted as undeveloped land.	<p><b>North and West:</b> No structures/features depicted.</p> <p><b>South:</b> Depicted with a road and no structures/features depicted beyond.</p> <p><b>East:</b> Depicted with a street with no structures/features depicted beyond.</p> <p>The surrounding area is depicted with a railroad to the north and south and structures throughout</p>
1953, 1966, 1972, and 1994	Shaded indicating urban development; however, no structures are depicted.	<p><b>North, South, and West:</b> Shaded indicating urban development; however, no structures are depicted.</p> <p><b>East:</b> Depicted with a street and shaded beyond indicating urban development; however, no structures are depicted.</p> <p>The surrounding area is shaded red indicating urban development with schools and the Hollywood - Burbank Airport also depicted.</p>

Topographic Maps that were created in 2012, 2015, 2018, and 2022 do not depict any structures and only indicate street development and street names. This does not indicate that structures were not present at that time.

No coverage for the Subject Property or adjoining properties was available for the following years, which were provided: 1932, 1933, and 1942.

The image provided from 1976 is an aerial photograph, which is reviewed in Section 4.2.

## 4.2 AERIAL PHOTOGRAPHY REVIEW

Aerial Photography of many portions of the United States dates back to the 1920's. Items searched for in each photograph included, but were not limited to: evidence of tanks, gas stations, industrial site usage, water drainage pathways, areas which show evidence of drums or excessive debris, discolored or stained soils, areas of distressed vegetation, et cetera.

Available aerial photographs dated from 1928 to 2020 were obtained from EDR and reviewed for this assessment. A summary of EFI's observations is presented in the following table.

The aerial photographs are provided in [Appendix G](#).

Aerial photographs indicate that the Subject Property was developed for agricultural purposes from 1928 to 1938. For further discussion, refer to Section 4.7.

### 4.3 SANBORN MAP REVIEW

Originally compiled by the Sanborn Map Company of Pelham, New York (Sanborn Map) for fire insurance companies to assess fire risks related to building materials and hazardous materials storage, today Sanborn maps are an invaluable tool for Environmental Professionals in determining historical site use and the potential for environmental conditions. Sanborn map coverage is available from as early as 1867 in some cities. Although Sanborn maps were created for approximately twelve thousand cities and towns in the United States, Canada, and Mexico, Sanborn map coverage is not available in newer and more rural communities.

Sanborn map coverage was obtained from EDR from 1953 to 1969 and reviewed for this assessment. A summary of EFI's observations is presented in the following table.

The Sanborn map search is provided in [Appendix H](#).

#### 4.4 CITY DIRECTORY REVIEW

City directories have been published since the 1800's and provide detailed occupant information for the Subject Property and its surrounding area at five-year intervals. #### 4.6 OTHER HISTORICAL SOURCES

In order to further research data gaps, EFI consulted additional resources to further establish the history of the Subject Property. This research may include, but is not limited to: newspapers, miscellaneous maps, books about the history of the area, imagery, land title records, historical societies, interviews, internet searches, and other historical data.

No additional research was conducted during this assessment.

Documentation, if any, is included in [Appendix K](#).

#### 4.7 HISTORICAL SUMMARY

According to EFI's review of the historical resources, the Subject Property was undeveloped from sometime prior to 1894 through at least 1926. By at least 1928 to 1938, the Subject Property was developed for agricultural purposes. The Subject Property was unimproved land from sometime prior to 1946. By 1947, the Subject Property at 2325 and 2327 North Fairview Street and 2335 North Fairview Street were developed with residential structures. The Subject Property at 2331 and 2335 North Fairview Street was developed with residential structure by 1948 and the Subject Property at 2321 North Fairview Street was developed with a residential structure by 1963. By at least 1977, the Subject Property was developed with the existing seven residential structures and concrete-paved parking areas. The Subject Property has remained in this configuration through the present.

Occupants of the Subject Property have been residential since construction.

- The Subject Property was historically used for agricultural purposes from 1928 to 1938. There is a potential that during this period agricultural chemicals, such as pesticides, herbicides, and fertilizers, were applied to site soils consistent with normal application practices. Agricultural chemicals tend to accumulate in the near-surface soils. As the Subject Property has been redeveloped, which typically involves grading (soil mixing) of the first few feet of soil, it is likely that the agricultural chemicals, if any were present, have been homogenized and redistributed, which likely reduced any residual concentrations to within acceptable screening levels for the continued multi-family residential use of the Subject Property. Furthermore, the Subject Property is primarily covered by paved surfaces, which will further reduce potential exposure to any residual agricultural chemicals that may be present. Based on the foregoing, it is our opinion that a risk to human health or the environment from the historical agricultural use of the Subject Property is unlikely, and therefore, the historical agricultural use is not considered a significant environmental concern.

#### 4.8 HISTORICAL DATA FAILURE

Based on our review of the historical data, no significant data gaps were encountered during our research.

## 5.0 RECORDS REVIEW AND VAPOR ENCROACHMENT SCREEN

A radial database search was conducted in accordance with the specifications defined in ASTM International E1527-21 which sets the radial search distances for each regulatory database. A copy of the database report is presented in [Appendix L](#) of this report.

Following are summaries of the information found for the Subject Property and adjoining and immediately surrounding properties within the relevant database listings and EFI's opinion regarding the potential for the Subject Property to be impacted. Furthermore, EFI considered database listings for surrounding area properties with reported releases.

EFI's opinion is based on the information found in the database listings, through other historical and regulatory resources, "Standard Guide for Vapor Encroachment Screening (VES) on Property Involved in Real Estate Transactions" (ASTM International E2600-15), and assumed groundwater flow direction discussed in Section 2.3.

### 5.1 SUBJECT PROPERTY

#### **San Fernando Valley Area 1 North Hollywood Well Field Area (North Hollywood, CA 91601) -**

The San Fernando Valley is listed on the National Priority List (NPL), Superfund Enterprise Management System (SEMS), Engineering Controls Sites List (US ENG CONTROLS), and Sites with Institutional Controls (US INST CONTROL) databases. According to the information provided, groundwater throughout the San Fernando Valley has been documented as being impacted by chlorinated organic compounds (VOCs) which include trichloroethylene (TCE) and tetrachloroethylene (PCE). The groundwater plume underlies the section of North Hollywood in Crystal Springs Well Field in Los Angeles, which is part of the San Fernando Valley groundwater basin. The United States Environmental Protection Agency (USEPA) and the Los Angeles Department of Water and Power (LADWP) are the lead agencies responsible for investigations and remedial activities. Remedial solutions adopted thus far have included an extraction and treatment system which consists of extraction wells, an air-stripping treatment system to remove VOCs from the air stream, and activated carbon filters to remove VOCs from the air stream. The treatment system commenced operation since being proposed in 1984 and remains active today. To alleviate the threat to human health from this contamination, public supply wells are either taken out of service or blended with water from clean sources to ensure that the public receives water with contaminant levels below the State's guidelines.

There are 124 PRPs that were engaged in industrial activity in Area 1, including machinery degreasing, dry cleaning, and metal cleaning, in the affected area. The regional investigation of the North Hollywood Well Field area was completed on June 10, 1986. According to the most recent update on the EPA website, a clean-up plan was proposed on September 1, 1987. According to the most recent available groundwater data collected on July 21, 2015, the Subject Property is within the North Hollywood Operable Unit Study Area; however, the contaminant plume within the San Fernando Valley Area 1 Superfund Site does underlie the Subject Property. The Subject Property is not listed on the list of PRPs. Based on the current regulatory oversight by the EPA and LADWP, the ongoing remedial efforts and the identification of responsible parties, and the presumed depth to groundwater (excess of 100-feet), these listings are not expected to be a REC for the Subject Property.

**Burnbank Housing Corp. (2321 North Fairview Street) -** The Subject Property is listed on the Hazardous Waste Tracking System (HWTS) database. According to the information provided, the Subject Property was issued Environmental Protection Agency (EPA) Identification number

(ID) CAC002593075 and became inactive on January 16, 2006. No further information was provided. Based on the inactive status and lack of evidence of a documented release, this listing is not expected to be a REC.

**Burbank Housing Corp. (2327 North Fairview Street)** - The Subject Property is listed on the HWTS and Facility and Manifest Data (HAZNET) databases. According to the information provided, the Subject Property generated between 3.5 and 4.2-tons of hazardous waste in the form of asbestos-containing waste in 2004. The hazardous waste was disposed of via disposal and land fill. The Subject Property was issued EPA ID CAC002582939 and was provided with an inactive status on June 21, 2005. No further information was provided. Based on the proper handling and disposal of the hazardous waste, inactive status, and lack of evidence of a documented release, these listings are not expected to be a REC.

**Burbank Housing Corp. (2332-2333 North Fairview Street)** - The Subject Property is listed on the HWTS and HAZNET databases. According to the information provided, The Subject Property generated 0.1-tons of hazardous waste in the form of other organic solids in 2000. The hazardous waste was disposed of via transfer station. The Subject Property was issued EPA ID CAC002271641 and was provided with an inactive status on June 11, 2001. No further information was provided. Based on the proper handling and disposal of the hazardous waste, inactive status, and lack of evidence of a documented release, these listings are not expected to be a REC.

**Burbank Housing Corp. (2335 North Fairview Street)** - The Subject Property is listed on the HWTS and HAZNET databases. According to the information provided, the Subject Property generated 0.05-tons of hazardous waste in the form of other inorganic solid waste organics in 2004. The hazardous waste was disposed of via transfer station. The Subject Property was issued EPA ID CAC002578397 and was provided with an inactive status on December 28, 2004. No further information was provided. Based on the proper handling and disposal of the hazardous waste, inactive status, and lack of evidence of a documented release, these listings are not expected to represent a REC.

## 5.2 ADJOINING AND IMMEDIATELY SURROUNDING PROPERTIES

No adjoining/immediately surrounding properties (within 100 feet) were listed on any of the regulatory databases researched.

## 5.3 SURROUNDING AREA

**3100 Partners LLC / Lockheed A-1 East, B / Lockheed A-1, B85, L (2333 North Ontario Street / 3100 Thornton Avenue)**- The property located approximately 200 feet to the west (hydrologically down to cross-gradient) of the Subject Property is listed on the HWTS, HAZNET, Resource Conservation and Recovery Act - Non Generator / No Longer Regulated (RCRA NonGen / NLR), aboveground storage tank (AST), California Environmental Reporting System (CERS), Cleanup Program Sites formerly Spills, Leaks, Investigations and Cleanup (CPS-SLIC), and Well Investigation Program Case List (WIP) databases.

According to the information provided and information from the State Water Resource Control Board's (SWRCB) GeoTracker databases, this facility was previously utilized for various chemical storage, equipment storage, and support operations from 1943 to 1968. It was reported that a 15,000-gallon AST that contained tetrachloroethene (PCE) and trichloroethene (TCE) was previously located on the northwest corner of the property. It was reported that a release of volatile organic compounds (VOCs) that impacted an aquifer used for drinking water supply was discovered on January 2, 1965.

Remedial actions included multi-phase soil gas and soil assessments to locate potential sources of contamination (VOCs and non-VOCs) and remediate them. Elevated concentrations of PCE and TCE were detected at maximum concentrations of 28,100 micrograms per liter ( $\mu\text{g/L}$ ) (140 feet below ground surface [bgs]) and 501  $\mu\text{g/L}$  (130 feet bgs), respectively in the northwest part of the property near the former PCE/TCE AST. VOC concentrations generally increased with depth from approximately 100 feet to 170 feet bgs. The remainder of the property had low to nondetectable (ND) concentrations of contaminants in soil matrix and soil gas samples.

On November 16, 1995, Regional Board staff issued a no further investigation letter, except the VOC-contamination in the northwest portion of the property. The SWRCB approved a remediation program which would remediate VOCs beneath the northwest portion of the property. It was reported that residual VOCs that remained at the property did not appear to pose a significant threat to groundwater quality and human health. Lockheed Martin was informed that they must continue to monitor VOCs in groundwater.

Based on the down to cross-gradient location with regard to the Subject Property, distance from the Subject Property (approximately 200 feet away and across North Ontario Street), and ongoing regulatory oversight, this release is not expected to be a REC for the Subject Property.

None of the other sites listed on the regulatory database report are considered to pose a significant threat or potential vapor encroachment condition (pVEC) to the Subject Property as there is no indication of a release at the respective sites, a release has occurred but groundwater has not been impacted, a release has occurred but the case is closed, or the sites are located cross- or down-gradient of the Subject Property and in excess of 1/10 mile from the Subject Property or the critical distance per the VES standard.

#### 5.4 ORPHAN SITES

Orphan sites are unmappable sites which appear in a list form in the Radius Map Report rather than on the standard Radius Map. One orphan site was identified in the Radius Map Report prepared for the Subject Property. The site was manually mapped to determine the location of the site relative to the Subject Property and groundwater gradient.

A cursory review of this listing indicated that the site is not associated with the Subject Property or adjoining properties or otherwise considered to represent a REC to the Subject Property.

## 6.0 AGENCY RECORDS AND FILE REVIEWS

### 6.1 FEDERAL AND STATE AGENCIES

The Los Angeles Regional Water Quality Control Board (LARWQCB), Department of Toxic Substances Control (DTSC), and South Coast Air Quality Management District (SCAQMD) were contacted regarding permits, air emissions, and site investigation files for the Subject Property. Additionally, the State Water Resources Control Board's (SWRCB) GeoTracker, SCAQMD's online Facility Information Detail (FIND), DTSC's EnviroStor and Hazardous Waste Tracking System (HWTS), USEPA Facility Registry Service (FRS), Enforcement and Compliance History Online (ECHO), and UST online databases were searched for information on the Subject Property to identify any evidence of previous or current hazardous material usage.

- According to the responses to EFI's requests from the LARWQCB, DTSC, and SCAQMD, and a review of the aforementioned databases with the exception of the HWTS database, there are no files for the Subject Property.
- The HWTS maintained records for the Subject Property at 2321, 2327, 2333, and 2335 North Fairview Street which are summarized in Section 5.1 above.

Note that the above agency requests were made and the online database searches were conducted on May 2, 2024, with responses received through May 13, 2024.

Requests, responses and records from the above-referenced agencies are included in [Appendices M and N](#).

The California Department of Conservation, Geologic Energy Management Division (CalGEM) online mapping application Well Finder was reviewed for information pertaining to oil and gas exploration on or nearby the Subject Property. In addition, the Pipeline and Hazardous Materials Safety Administration (PHMSA) National Pipeline Mapping System Public Map Viewer was reviewed for information on natural gas and hazardous material pipelines on or nearby the Subject Property.

- No oil wells or pipelines were identified within 500 feet of the Subject Property.

Records of the above can be referenced in [Appendix O](#).

### 6.2 LOCAL AGENCIES

The Los Angeles County Fire Department Health and Hazardous Materials Division (LACFD HHMD), City of Burbank Fire Department (BFD), City of Burbank Wastewater Systems (BWS) were contacted regarding hazardous materials, underground storage tank, and industrial waste discharge records for the Subject Property. Additionally, the LACFD HHMD Active and Inactive CUPA Program Records, Site Mitigation Unit (SMU) Case Records, and California Accidental Release Program (CalARP) online databases were reviewed for information pertaining to the Subject Property.

- According to the responses to EFI's requests from the BWS, and a review of the aforementioned online databases, there are no files for the Subject Property.
- According to the response received from the BFD, the Subject Property was inspected in the following years: 2005, 2008, 2009, 2015, 2016, 2018, 2019, 2020, 2022, and 2023. The BFD issued the Subject Property violations 2012 for failure to service the extinguishers throughout the structure at 2335 North Fairview Street, failure to hang extinguishers on

approved positive latching brackets at 2331 North Fairview Street, and failure to provide a sign reading "main electrical panel inside" at the Subject Property at 2321 North Fairview Street in 2020. Additionally, a Memorandum provided by the BFD on July 11, 2023 for all Subject Property addresses reported that code requirements such as providing automatic fire sprinkler systems and providing a fire alarm system were required for any plans submitted to the BFD for review. Based on the regulatory oversight and lack of evidence of any hazardous materials, these records are not expected to represent a REC.

Note that the above agency requests were made and the online database searches were conducted on May 2, 2024, with responses received through May 9, 2024.

Requests, responses and records from the above-referenced agencies are included in [Appendix P](#).

### **6.3 AGENCY RECORDS RESEARCH LIMITATIONS**

No limitations were encountered during EFI's agency record research.

## 7.0 CONSIDERATIONS BEYOND SCOPE

ASTM International E1527-21 identifies additional conditions which, should they exist at the Subject Property, may create a human health risk to the occupants of the site. These risks may also create additional costs to the property owner in the form of identification, operations & maintenance, and cleanup or remediation.

### 7.1 ASBESTOS CONTAINING BUILDING MATERIALS

Asbestos is a group of naturally occurring minerals used in many products, including building materials vehicle brakes, insulation and other products that require resistance to heat and corrosion. Asbestos includes: chrysotile, amosite, crocidolite, tremolite asbestos, anthophyllite asbestos, actinolite asbestos, and any of these materials that have been chemically treated and/or altered.

The inhalation of asbestos fibers by workers can cause cancer and other serious diseases of the lungs and other organs that may not appear until years after the exposure has occurred. For instance, asbestosis can cause a buildup of scar-like tissue in the lungs and result in loss of lung function. Asbestos fibers associated with these health risks are too small to be seen with the naked eye, and smokers are at higher risk of developing some asbestos-related diseases.

Asbestos-containing materials (ACMs) do not always pose a hazard to occupants and workers in buildings that contain these materials. Intact, undisturbed ACMs generally do not pose a health risk. ACMs may become hazardous and pose an inhalation risk when they are damaged, disturbed in some manner, or deteriorate over time and asbestos fibers are released into building air.

ACMs can be found in a multitude of building products which include decorative and acoustical plaster texture, fire-proofing (Monokote), joint compound, attic and wall insulation, resilient floor covering, mastic, recessed lighting fixtures, wiring, elevator brakes, fire doors, pipe insulation, pipe gaskets, duct insulation, duct tape, siding and roofing materials (tar/shingles), textured paint, stucco, concrete, asphalt underlayment (Petromat) and plaster.

Local jurisdictions have specific laws and regulations regarding asbestos and actions including building renovations and building demolition.

- Based on the age of the Subject Property structures, there is a potential for asbestos-containing building materials at the Subject Property; however, no testing was completed as part of this report. Suspect ACMs were observed in the form of stucco, and mastics associated with vinyl and tile flooring. All building materials appeared in good condition at the time of our site reconnaissance. Individual suspect materials would need to be tested as part of an asbestos survey prior to any renovation or demolition in order to confirm the presence or non-presence of asbestos.

Documentation regarding the above, if any, is included in [Appendix Q](#).

### 7.2 LEAD-BASED PAINT

Although the use of lead-based paint (LBP) in residential structures has been prohibited since 1978, it may still be used in commercial and industrial buildings. It is approximated that 80 percent of buildings built prior to 1978 contain LBP. Even at low levels, lead poisoning can cause intelligence quotient (IQ) deficiencies, reading and learning disabilities, impaired hearing, reduced attention spans, hyperactivity, and other behavioral problems with children under 6 years old being most at risk.

Lead is a highly toxic metal that was used for many years in products found in and around homes and commercial buildings. Lead can be found in dust from friction surfaces of windows and doors that are painted with lead-based paint and from building components coated with LBP that has begun peeling, flaking, and chalking. There is also the potential for soil to have elevated lead levels due to leaching from LBP on nearby structures and deposition of airborne lead when leaded fuel was in use prior to the 1976 ban and phase out.

Since the 1980's, lead has been phased out in gasoline, reduced in drinking water, reduced in industrial air pollution, and banned or has been limited in use in consumer products.

Local, State, and Federal agencies, including the USEPA, Department of Housing and Urban Development (HUD), and Occupational Safety & Health Administration (OSHA), have set various action limits that have been enacted with the intent to prevent human exposure and contamination of the surrounding environment.

- Based on the age of the Subject Property structures, there is a potential for LBP at the Subject Property. All painted surfaces appeared in good condition at the time of our site reconnaissance. Individual suspect materials would need to be tested as part of a lead-based paint survey prior to any renovation or demolition in order to confirm the presence or non-presence of LBP.

Documentation regarding the above, if any, is included in [Appendix Q](#).

### 7.3 RADON

Radon is a radioactive gas that has been found in structures all over the United States. Radon is produced from the natural breakdown of uranium in soil, rock, and water. Radon typically moves up through the ground and into structures through cracks and other holes in the foundation. Movement of radon through the earth is strongly influenced by moisture content and permeability of soil, porosity, and degree of fracturing in rocks, as well as surface meteorological conditions. High levels of radon have been discovered in every state.

Radon cannot be seen, smelled, or tasted. Breathing air-containing radon may increase the risk of getting lung cancer. The Surgeon General of the United States has warned that radon is the second leading cause of lung cancer in the United States today after smoking.

The USEPA has designated three zones depending on radon potential. Zone 1 is an area with the average predicted indoor radon concentration in residential dwellings exceeding the USEPA action limit of 4.0 picoCuries per Liter (pCi/L). Zone 2 are areas with average predicted indoor radon concentration of 2.0 - 4.0 pCi/L and Zone 3 are those areas with an average predicted indoor radon concentration in residential dwellings below 2.0 pCi/L.

Testing for the presence of radon is fairly inexpensive, simple and is the only way to be certain of the on-site concentrations. Various types of sampling methods exist to determine the concentration. On-site radon sampling was not performed during the completion of this assessment.

- Based on our research at the USEPA, the average radon concentrations for Los Angeles County are between 2.0 pCi/L and 4.0 pCi/L, which is below the 4.0 pCi/L action level set by the USEPA. Further, the California Geological Survey *Radon Potential Radon Zone Map for Southern California*, dated January 2005, shows low concentrations of radon in the vicinity of the Subject Property. Site specific radon levels vary greatly within the USEPA radon zones

and on-site radon measurements would need to be collected in order to determine the radon levels at the Subject Property.

Documentation regarding the above, if any, is included in [Appendix Q](#).

#### 7.4 MICROBIAL GROWTH AND MOISTURE INTRUSION

Mold and mildew are simple, microscopic organisms in the Fungi kingdom that can grow virtually anywhere if they have adequate moisture, nutrients, air and appropriate temperatures. Depending on the particular mold or fungus, growing colonies can be almost any color. Most household molds and fungi (mildews) are white, black, grey, or brown colored. Spores of dozens of kinds of mold and fungus (mildew) are present at all times in indoor and outdoor air. These spores can settle, germinate and grow wherever good growth conditions are found. They can grow on soil, plants, dead plant materials, foods, fabrics, paper, wood and many other materials found within structures. Many molds are not harmful and actually have a beneficial role in the environment and in living systems. In soil, molds play a crucial part in decomposition of organic matter and in making nutrients available to plants.

When mold and fungi (mildews) growth occurs in structures, it can be very destructive to the materials on which they grow and cause high levels of airborne mold spores and volatile organic compounds associated with the characteristic musty / moldy odor. They cause staining, decomposition (rotting of materials) and objectionable, musty odors. Where colonies are extensive they can also produce enough spores, and by-products to be harmful to health. Many of the by-products of mold and fungus (mildew) are irritating to skin, eyes and respiratory tracts. Some molds produce true allergic sensitization and allergic reactions in susceptible people. Some molds produce toxic by-products that could be harmful to skin, and poisonous if ingested or inhaled in quantity. Persons with compromised immune systems may even experience systemic fungal infections of the respiratory tract.

EFI observed a limited amount of interior areas of the Subject Property structures in order to identify the significant, visible presence of mold. This activity was not intended to discover all areas which may be affected by mold growth at the Subject Property. Potential areas of mold not observed as part of this limited assessment, include but are not limited to, pipe chases, HVAC systems and within enclosed wall and ceiling cavities that may be present in the Subject Property. A complete mold assessment, which may include various types of sampling, would be required to determine if mold levels within the Subject Property structure are at levels acceptable by industry standards.

- EFI did not observe visible or olfactory indications of the presence of mold, nor did EFI observe obvious indications of significant water damage. No sampling was conducted as part of this assessment.

Documentation regarding the above, if any, is included in [Appendix Q](#).

#### 7.5 METHANE GAS

In response to growing concern regarding methane intrusion into structures and to the potential for methane build-up underneath structures, certain municipalities have established methane requirements for structures based on the proximity to oil wells and landfills. If a Subject Property is located in the proximity of active or abandoned oil wells or landfills, methane mitigation devices installed prior to construction activities at a Subject Property may be necessary.

- Based on EFI's research, the Subject Property is not known to be located in proximity (within 1,000 feet) to any active or abandoned oil wells or landfills. Therefore, the potential for methane risk at the Subject Property is considered low.

Documentation regarding the above, if any, is included in [Appendix Q](#).

## 7.6 WETLANDS

According to the Clean Water Act, a wetland is "those areas that are inundated or saturated by surface or groundwater at a frequency and duration sufficient to support, and that under normal circumstances do support, a prevalence of vegetation typically adapted for life in saturated soil conditions." Wetland areas have been identified as ecologically diverse and sensitive areas and are generally subject to more stringent development, re-development, and building regulations.

- According to the United States Fish and Wildlife Service (USFWS) Geospatial Wetlands Information online map, there are no mapped wetlands on the Subject Property. Additionally, no evidence of wetlands, settling ponds, lagoons, surface impoundments, natural catch-basins, or potential wetland features (water marks on tree trunks, drift lines, buttressed roots, etc.) were observed at the Subject Property during this investigation and no evidence of potential water features were noted on the reviewed historical source documents.

Documentation regarding the above, if any, is included in [Appendix Q](#).

- **USE COMPLEX EMAIL PASSWORDS** that employ a combination of mixed case, numbers, and symbols. Make your passwords greater than eight (8) characters. Also, change your password often and **DO NOT** reuse the same password for other online accounts.

## Wire Fraud Alert

This Notice is not intended to provide legal or professional advice. If you have any questions, please consult with a lawyer.

All parties to a real estate transaction are targets for wire fraud and many have lost hundreds of thousands of dollars because they simply relied on the wire instructions received via email, without further verification. **If funds are to be wired in conjunction with this real estate transaction, we strongly recommend verbal verification of wire instructions through a known, trusted phone number prior to sending funds.**

In addition, the following non-exclusive self-protection strategies are recommended to minimize exposure to possible wire fraud.

- **NEVER RELY** on emails purporting to change wire instructions. Parties to a transaction rarely change wire instructions in the course of a transaction.
- **ALWAYS VERIFY** wire instructions, specifically the ABA routing number and account number, by calling the party who sent the instructions to you. **DO NOT** use the phone number provided in the email containing the instructions, use phone numbers you have called before or can otherwise verify. **Obtain the phone number of relevant parties to the transaction as soon as an escrow account is opened.** **DO NOT** send an email to verify as the email address may be incorrect or the email may be intercepted by the fraudster.
- **USE COMPLEX EMAIL PASSWORDS** that employ a combination of mixed case, numbers, and symbols. Make your passwords greater than eight (8) characters. Also, change your password often and do **NOT** reuse the same password for other online accounts.
- **USE MULTI-FACTOR AUTHENTICATION** for email accounts. Your email provider or IT staff may have specific instructions on how to implement this feature.

## Wire Fraud Alert

This Notice is not intended to provide legal or professional advice. If you have any questions, please consult with a lawyer.

All parties to a real estate transaction are targets for wire fraud and many have lost hundreds of thousands of dollars because they simply relied on the wire instructions received via email, without further verification. **If funds are to be wired in conjunction with this real estate transaction, we strongly recommend verbal verification of wire instructions through a known, trusted phone number prior to sending funds.**

In addition, the following non-exclusive self-protection strategies are recommended to minimize exposure to possible wire fraud.

- **NEVER RELY** on emails purporting to change wire instructions. Parties to a transaction rarely change wire instructions in the course of a transaction.
- **ALWAYS VERIFY** wire instructions, specifically the ABA routing number and account number, by calling the party who sent the instructions to you. **DO NOT** use the phone number provided in the email containing the instructions, use phone numbers you have called before or can otherwise verify. **Obtain the phone number of relevant parties to the transaction as soon as an escrow account is opened.** **DO NOT** send an email to verify as the email address may be incorrect or the email may be intercepted by the fraudster.
- **USE COMPLEX EMAIL PASSWORDS** that employ a combination of mixed case, numbers, and symbols. Make your passwords greater than eight (8) characters. Also, change your password often and do **NOT** reuse the same password for other online accounts.
- **USE MULTI-FACTOR AUTHENTICATION** for email accounts. Your email provider or IT staff may have specific instructions on how to implement this feature.

## Wire Fraud Alert

This Notice is not intended to provide legal or professional advice. If you have any questions, please consult with a lawyer.

## EXECUTIVE SUMMARY

### DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Abstract is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Abstract includes a search and abstract of available city directory data. For each address, the directory lists the name of the corresponding occupant at approximately five year intervals.

Business directories including city, cross reference and telephone directories were reviewed, if available, at approximately five year intervals for the years spanning 1920 through current. This report compiles information gathered in this review by geocoding the latitude and longitude of properties identified and gathering information about properties within 660 feet of the target property.

Summary information obtained is provided in the text of this report.

### RECORD SOURCES

The EDR City Directory Report accesses a variety of business directory sources, including Haines, InfoUSA, Polk, Cole, Bresser, and Stewart. Listings marked as EDR Digital Archive access Cole and InfoUSA records. The various directory sources enhance and complement each other to provide a more thorough and accurate report.

EDR is licensed to reproduce certain City Directory works by the copyright holders of those works. The purchaser of this EDR City Directory Report may include it in report(s) delivered to a customer.

The Burbank City Clerk acts as a compliance officer for federal, state, and local statutes, including the Political Reform Act, the Ralph M. Brown Act, and the California Public Records Act.

The City of Burbank is committed to providing open and transparent access to public records created and maintained by the City, which includes timely access to requested records. Members of the public can access records such as City Council resolutions, ordinances, and minutes, in addition to building documents including permits, inspection records, and certificates of occupancies.

We use OnBase, special software which scans and stores City documents and offers easy access to those documents by City staff and the public.

## SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.

Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in **bold italics** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

## STANDARD ENVIRONMENTAL RECORDS

### **Lists of Federal CERCLA sites with NFRAP**

SEMS-ARCHIVE: SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be potential NPL site.

A review of the SEMS-ARCHIVE list, as provided by EDR, and dated 01/29/2024 has revealed that there are 5 SEMS-ARCHIVE sites within approximately 0.5 miles of the target property.

RCRA-TSDF: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

A review of the RCRA-TSDF list, as provided by EDR, and dated 12/04/2023 has revealed that there are 2 RCRA-TSDF sites within approximately 0.5 miles of the target property.

### ***Lists of Federal RCRA generators***

RCRA-LQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

A review of the RCRA-LQG list, as provided by EDR, and dated 12/04/2023 has revealed that there are 4 RCRA-LQG sites within approximately 0.25 miles of the target property.

ENVIROSTOR: The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifies sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

A review of the ENVIROSTOR list, as provided by EDR, and dated 01/22/2024 has revealed that there are 20 ENVIROSTOR sites within approximately 1 mile of the target property.

## EXECUTIVE SUMMARY

UST FINDER: EPA developed UST Finder, a web map application containing a comprehensive, state-sourced national map of underground storage tank (UST) and leaking UST (LUST) data. It provides the attributes and locations of active and closed USTs, UST facilities, and LUST sites from states and from Tribal lands and US territories. UST Finder contains information about proximity of UST facilities and LUST sites to: surface and groundwater public drinking water protection areas; estimated number of private domestic wells and number of people living nearby; and flooding and wildfires.

A review of the UST FINDER list, as provided by EDR, and dated 06/08/2023 has revealed that there are 2 UST FINDER sites within approximately 0.25 miles of the target property.

UST FINDER RELEASE: US EPA's UST Finder data is a national composite of leaking underground storage tanks. This data contains information about, and locations of, leaking underground storage tanks. Data was collected from state sources and standardized into a national profile by EPA's Office of Underground Storage Tanks, Office of Research and Development, and the Association of State and Territorial Solid Waste Management Officials.

A review of the UST FINDER RELEASE list, as provided by EDR, and dated 06/08/2023 has revealed that there are 9 UST FINDER RELEASE sites within approximately 0.5 miles of the target property.

### EDR HIGH RISK HISTORICAL RECORDS

#### ***EDR Exclusive Records***

EDR Hist Auto: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Auto list, as provided by EDR, has revealed that there is 1 EDR Hist Auto

section of the City of Los Angeles, Los Angeles County, California. This area is part of the San Fernando Valley Basin, a natural underground reservoir that represents an important source of drinking water for at least 3 million people in the Los Angeles metropolitan area. The contaminated ground water, which underlies an area of approximately 5,156 acres, contains trichloroethylene (TCE) and perchloroethylene (PCE), and to a lesser extent, carbon tetrachloride and chloroform, according to analyses conducted by the California Department of Health Services, as well as numerous local government agencies. The State's recommended drinking water guideline for TCE and PCE (5 and 4 parts per billion respectively) are exceeded in a number of public wells in this area. To alleviate this contamination, wells are either taken out of service or blended with water from clean sources to ensure that the public receives water with TCE/PCE concentrations below the State's guidelines. Status June 10, 1986): EPA and the Los Angeles Department of Water and Power are entering into a cooperative agreement for a remedial investigation of the San Fernando Valley Basin and a feasibility study targeted at Area 1, the most contaminated area. The RI is scheduled to begin in early 1986.

**Environmental Interest/Information System:**

The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

**Environmental Interest/Information System:**

The California Environmental Reporting System (CERS) is a statewide web-based user and information exchange system to support over 140,000 regulated businesses and over 130 local agencies in electronically collecting and reporting significant hazardous materials, hazardous waste and compliance and enforcement data as mandated by California law. Under oversight by Cal/EPA, certified local governing agencies (Unified Program Agencies - UPAs) consolidate, coordinate and provide consistent regulatory activities for six state and federal environmental programs.

The California Environmental Protection Agency (CalEPA) has recently implemented a new data warehouse system (nSite). This data warehouse combines and merges facility and site information from five different systems managed within CalEPA. The five systems are: California Environmental Reporting System (CERS), EnviroStor, GeoTracker, California Integrated Water Quality System (CIWQS), and Toxic Release Inventory (TRI).

Environmental Interest/Information System:

The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste. California's Hazardous Waste Tracking System Data Mart (HWTS-DATAMART) provides information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RWQCB Region: LOS ANGELES RWQCB (REGION 4)  
Site History: Site assessments indicated elevated concentrations of PCE and TCE in the vadose zone in the northwest portion of the site near a former AST. An NFR letter was issued on November 16, 1995 excluding the VOC-contaminated northwest area. An SVE system operated intermittently between 1997 and 2002. PCE, TCE, and 1,1-DCE were significantly reduced compared to baseline concentrations and asymptotic conditions were attained. VLEACH modeling indicated that residual VOCs will not further degrade groundwater quality beneath the site. The Regional Board issued an NFR for soils letter on February 7, 2003. LMC monitors and treats the groundwater in the BOU on an ongoing basis with oversight by USEPA.

RWQCB Region: LOS ANGELES RWQCB (REGION 4)  
Site History: The Hydro-Aire facility is a subsidiary of Crane, a diversified manufacturer of engineered industrial products with operations worldwide. Hydro-Aire has been in operation at this location since 1946 (Hydro-Aire, 1987). Hydro-Aire manufactures aviation and aeronautical equipment at the site. The site encompasses approximately 11 acres in an industrial area of the City of Burbank (Figure 1). Kerr Canning Company used to occupy the site and the adjacent properties were used for agricultural purposes (grape growing). Pursuant to the California Environmental Quality Act (CEQA), the DTSC has prepared a Notice of Exemption (NOE) dated August 15, 2011, which concludes that the project will not have significant effect on the environment and a Land Use Covenant is to be recorded to restrict the property to current industrial/commercial use. Currently, several office and manufacturing buildings occupy the central and northern portions of the property, and paved parking areas are located in the eastern and southern portions of the site. The former plating room and the former wastewater treatment system were located at the south end of Building 1 (Figure 2). Hydro-Aire began electroplating operations at this location in 1951. In February 1985, an automated wastewater treatment system was installed as an integral part of the plating line (Hydro-Aire, 1986). The plating and wastewater treatment operations were discontinued in February 1991. Demolishing of the former plating room and wastewater treatment system components was conducted in 1991 and 2001. The California Regional Water Quality Control Board Los Angeles Region (RWQCB) has been the lead agency for the Hydro-Aire site investigation and remediation work since the 1980s. Significant investigation and remediation work at the site have been completed under the RWQCB s oversight including the former plating room assessments and soil remediation and groundwater monitoring. Concurrently with the RWQCB, the DTSC and City of Burbank have also provided oversight for this project. Detailed descriptions of the former plating room and operations have been provided in reports submitted to the Regional Board.

 Quarterly Update:

Treatment & Storage Closure: The Crane Company/Hydro-Aire Division facility is located approximately one quarter mile east of the Burbank airport at 3000 Winona Avenue in an industrial area of Burbank, California. Aviation and aeronautical equipment have been manufactured at the facility since 1946. Electroplating operations began in 1951 and in February 1985, an automated wastewater treatment system was installed as an integral part of the plating line. The plating and wastewater treatment operations were discontinued in February 1991. The former plating room and the former wastewater treatment system were located at the south end of Building 1, which is located in the northwest quadrant of the facility. Several office and manufacturing buildings occupy the central and northern portions of the 11-acre facility and paved parking areas are located in the eastern and southern portions. The former plating room was approximately 66 feet by 26 feet and contained tanks for electroplating of nickel, cadmium, and chromium. There were additional tanks for cleaning and rinsing the surfaces of metal being plated. All storage tanks associated with the former plating operations were above ground and were removed in 1983 and during the plating room demolition in 1991 and 2001. The components of the wastewater treatment system have also been removed. In 2001, stained concrete and shallow soil were removed and clean fill soil was placed in the former plating room. The concentrations of cadmium in soil samples from beneath the former plating room are comparable to health risk screening criteria for industrial use of the property. Low concentrations of volatile organic compounds (VOCs) were detected in two soil samples collected in 2004. The draft Closure Plan for Former Plating Room and Wastewater Treatment System Areas, dated May 21, 2010, provides information about the facility and a plan for collection and analysis of soil and soil gas samples to determine VOC

**Environmental Interest/Information System:**

The California Environmental Protection Agency (CalEPA) has recently implemented a new data warehouse system (nSite). This data warehouse combines and merges facility and site information from five different systems managed within CalEPA. The five systems are: California Environmental Reporting System (CERS), EnviroStor, GeoTracker, California Integrated Water Quality System (CIWQS), and Toxic Release Inventory (TRI).

The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

California's Hazardous Waste Tracking System Data Mart (HWTS-DATAMART) provides information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

**Environmental Interest/Information System:**

All generators and treatment, storage, and disposal (TSD) facilities who handle hazardous waste are required to report to the EPA Administrator at least once every two years. The data collected is used to create the National Biennial Resource Conservation and Recovery Act (RCRA) Hazardous Waste Report. This data is processed within the RCRA Information (RCRAInfo) database. The California Environmental Reporting System (CERS) is a statewide web-based user and information exchange system to support over 140,000 regulated businesses and over 130 local agencies in electronically collecting and reporting significant hazardous materials, hazardous waste and compliance and enforcement data as mandated by California law. Under oversight by Cal/EPA, certified local governing agencies (Unified Program Agencies - UPAs) consolidate, coordinate and provide consistent regulatory activities for six state and federal environmental programs.

THE EMISSION INVENTORY SYSTEM (EIS) MAINTAINS AN INVENTORY OF LARGE STATIONARY SOURCES AND VOLUNTARILY-REPORTED SMALLER SOURCES OF AIR POINT POLLUTANT EMITTERS. IT CONTAINS INFORMATION ABOUT FACILITY SITES AND THEIR PHYSICAL LOCATION, EMISSIONS UNITS, EMISSIONS PROCESSES, RELEASE POINTS, CONTROL APPROACHES, AND REGULATIONS. FACILITY INVENTORY DATA ARE KEPT SEPARATE FROM THE EMISSIONS DATA AND HAVE STABLE IDENTIFIERS TO IMPROVE CONTINUITY FROM YEAR TO YEAR AND TO HELP IDENTIFY DUPLICATE OR MISSING FACILITIES

The Integrated Compliance Information System (ICIS) provides a database that, when complete, will contain integrated enforcement and compliance information across most of EPA's programs. The vision for

ICIS is to replace EPA's independent databases that contain enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions and a subset of the Permit Compliance System (PCS), which supports the National Pollutant Discharge Elimination System (NPDES). This information is maintained in ICIS by EPA in the Regional offices and it at Headquarters. A future release of ICIS will completely replace PCS and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities that support compliance and enforcement programs, including incident tracking, compliance assistance, and compliance monitoring.

The Toxic Release Inventory System (TRIS) is a publicly available EPA database reported annually by certain covered industry groups, as well as federal facilities. It contains information about more than 650 toxic chemicals that are being used, manufactured, treated, transported, or released into the environment, and includes information about waste management and pollution prevention activities.

The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

The California Environmental Protection Agency (CalEPA) has recently implemented a new data warehouse system (nSite). This data warehouse combines and merges facility and site information from five different systems managed within CalEPA. The five systems are: California Environmental Reporting System (CERS), EnviroStor, GeoTracker, California Integrated Water Quality System (CIWQS), and Toxic Release Inventory (TRI).

The National Pollutant Discharge Elimination System (NPDES) module of the Integrated Compliance Information System (ICIS). Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

California's Hazardous Waste Tracking System Data Mart (HWTS-DATAMART) provides information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

Environmental Interest/Information System:

The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

The California Environmental Protection Agency (CalEPA) has recently implemented a new data warehouse system (nSite). This data warehouse

combines and merges facility and site information from five different systems managed within CalEPA. The five systems are: California Environmental Reporting System (CERS), EnviroStor, GeoTracker, California Integrated Water Quality System (CIWQS), and Toxic Release Inventory (TRI).  
 California's Hazardous Waste Tracking System Data Mart (HWTS-DATAMART) provides information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.
