III. EMERGENCY RESPONSE PLANS AND PROCEDURES

A. Notifications

Your business is required by State Law to provide an immediate verbal report of any release or threatened release of a hazardous material to local fire emergency response personnel, this Unified Program Agency (CUPA or PA), and the Office of Emergency Services. If you have a release or threatened release of hazardous materials, immediately call:

FIRE / PARAMEDICS / POLICE / SHERIFF PHONE: 911

AFTER the local emergency response personnel are notified, you shall then notify this Unified Program Agency and the Office of Emergency Services.

Local Unified Program Agency: (818) 238-3475
 State Office of Emergency Service: (800) 852-7550 or (916) 262-1621
 National Response Center: (800) 424-8802

Information to be provided during Notification:

- ❖ Your name and the telephone number from where you are calling.
- ❖ Exact address of the release or threatened release.
- ❖ Date, time, cause, and type of incident (e.g. fire, air release, spill etc.)
- ❖ Material and quantity of the release, to the extent known.
- ❖ Current condition of the facility.
- ❖ Extent of injuries, if any.
- ❖ Possible hazards to public health and/ or the environment outside of the facility.

B. Emergency Medical Facility

List the local emergency medical facility that will be used by your business in the event of an accident or injury caused by a release or threatened release of hazardous material

HOSPITAL/CLINIC: St. Joseph's Occupational Center	PHONE: 818-843-5111
ADDRESS: 3413 Pacific Ave.	
CITY: Burbank	ZIP CODE: 91505

OFFICIAL USE ONLY	DATE RECEIVED	REVIEWED BY

**UNIFIED PROGRAM (UP) FORM
CONSOLIDATED CONTINGENCY PLAN**

SECTION I: BUSINESS PLAN AND CONTINGENCY PLAN

C. Private Emergency Response

DOES YOUR BUSINESS HAVE A PRIVATE ON-SITE EMERGENCY RESPONSE TEAM? Yes No
 If yes, provide an attachment that describes what policies and procedures your business will follow to notify your on-site emergency response team in the event of a release or threatened release of hazardous materials.

CLEANUP/DISPOSAL CONTRACTOR
 List the contractor that will provide cleanup services in the event of a release.

NAME OF CONTRACTOR CHEMTREC	PHONE NO 800-424-9300
ADDRESS	
CITY	ZIP CODE

D. Arrangements With Emergency Responders

If you have made special (i.e. contractual) arrangements with any police department, fire department, hospital, contractor, or State or local emergency response team to coordinate emergency services, describe those arrangements on the lines below:
N/A

E. Evacuation Plan

1. The following alarm signal(s) will be used to begin evacuation of the facility (*check all which apply*):

Verbal Telephone (*including cellular*) Alarm System Public Address System Intercom
 Pagers Portable Radio Other (*specify*):

2. Evacuation map is prominently displayed throughout the facility.

3. Individual(s) responsible for coordinating evacuation including spreading the alarm and confirming the business has been evacuated:
Chuck Williams, Director of Security
Bill Gregory, Director of Property Operations
Manager on Duty along with Emergency Response Team

F. Earthquake Vulnerability

Identify areas of the facility where releases could occur or would require immediate inspection or isolation because of the vulnerability to earthquake related ground motion.

Hazardous Waste/ Hazardous Materials Storage Areas Production Floor Process Lines
 Bench / Lab Waste Treatment Other

Identify mechanical systems where releases could occur or would require immediate inspection or isolation because of the vulnerability to earthquake related ground motion.

Utilities Sprinkler Systems Cabinets Shelves
 Racks Pressure Vessels Gas Cylinders Tanks
 Process Piping Shutoff Valves Other:

UNIFIED PROGRAM (UP) FORM
CONSOLIDATED CONTINGENCY PLAN

SECTION I: BUSINESS PLAN AND CONTINGENCY PLAN

<p>G. <i>Emergency Procedures</i></p> <p>Briefly describe your business standard operating procedures in the event of a release or threatened release of hazardous materials:</p>
<p>1. PREVENTION (prevent the hazard) - Describe the kinds of hazards associated with the hazardous materials present at your facility. What actions would your business take to prevent these hazards from occurring? You may include a discussion of safety and storage procedures.</p> <p>See Attachments</p>
<p>2. MITIGATION (reduce the hazard) - Describe what is done to lessen the harm or the damage to person(s), property, or the environment, and prevent what has occurred from getting worse or spreading. What is your immediate response to a leak, spill, fire, explosion, or airborne release at your business?</p> <p>See Attachments</p>
<p>3. ABATEMENT (remove the hazard) - Describe what you would do to stop and remove the hazard. How do you handle the complete process of stopping a release, cleaning up, and disposing of released materials at your facility?</p> <p>See Attachments</p>

UNIFIED PROGRAM (UP) FORM CONSOLIDATED CONTINGENCY PLAN

	<input type="checkbox"/> Underground Tank Leak Detection Monitors		
	<input type="checkbox"/> Other (describe)		
Additional Equipment (Use Additional Pages if Needed.)			

- * Use the Location Codes (LC) from the Site Map(s) prepared for your Contingency Plan.
- ** Describe the equipment and its capabilities. If applicable, specify any testing/maintenance procedures/intervals. Attach additional pages, numbered appropriately, if needed.

Unified Program Consolidated Form
CONSOLIDATED CONTINGENCY PLAN
SECTION 1: BUSINESS PLAN AND CONTINGENCY PLAN
ATTACHMENTS

C. Private On-Site Emergency Response Team

- a) The Emergency Response Team (ERT) consists of pre-appointed staff members from all 3 shifts to give us coverage 24 hours a day, seven days a week.

They consist of the following:

- MOD (manager on duty)
 - Security Officer
 - Engineer
 - Front Desk Representative
 - Housekeeper
- b) Notification to in-house ERT is via pagers, telephones and/or two-way radios from the hotel PBX station, which is staffed 24 hours a day.
- c) Additional outside ERT's are contacted through the hotel PBX station 913 directed to the City of Burbank Hazardous Material Squad as part of the City of Burbank Fire Department compliment.

G. Emergency Procedures

1) Prevention

- a) While most of the hazardous materials at our site are Irritants or Corrosives, there are a few that cause concern regarding chronic health and/or flammability issues. The majority of the hazardous materials are in use in the following departments: Engineering, Laundry/Housekeeping, and both Kitchens.
- b) Safe handling procedures are in adherence to OSHA Hazard Communication Standards and MSDS guidelines issued by the product manufacturer. These procedures are upheld through training sessions with employees. Employees who use hazardous material shall not use the material until they have successfully completed the training, checked the container label, checked the MSDS, and are using the PPE specified on the label. Employees shall use and store chemicals as directed and will not mix chemicals without supervisory permission.

BURBANK FIRE DEPT.
- 913
20613 42

- c) Monthly Safety Committee meetings scheduled with key Administrative personnel and department managers which review the following:
 - safety hazard and the prevention thereof
 - “Safety Topic of the Month” Training (Hilton Corp. Program) which is then communicated to each manager and employee.
 - worker’s compensation claims and investigation into root cause of accident
 - Safety Suggestions submitted from employees to Administrator
 - review all employee injuries
 - receive additional guidance & training from our insurance representative
- d) Each department has Material Safety Data Sheets (MSDS) data for their own department’s chemicals and copies are available to all employees from the main binders (for entire facility) at the Employee entrance area for access.
- e) All hazardous material containment vessel kits, safety vests, protective gloves, protective suits and goggles are stored in the HazMat closet (storage near Parlor 129, #4 on site map, North end of East Tower) or in the Engineering Shop (#1 on site map, South end of East Tower) and issued by the Security Department and/or the Engineering Department.

2) **Mitigation**

- a) Notification to in-house ERT is via pagers, telephones and/or two-way radios from the hotel PBX station, which is staffed 24 hours a day.
- b) Additional outside ERT’s are contacted through the hotel PBX station to 911; directed to the City of Burbank Hazardous Material Squad as part of the City of Burbank Fire Department compliment.
- c) MOD (Manager-On-Duty) will coordinate with all local, county and state Emergency Response Organizations. Contact Insurance Carrier.
- d) After taking appropriate first aid action, employees shall report personal exposure with hazardous material to the Security Department, who will then contact the Hazardous Material Coordinator, Bill Gregory – Director of Property Operations. As part of HazMat internal emergency procedures Security or HMC is responsible for checking MSDS manual for further appropriate action.
- e) Threatened release: Activate Hazardous Material internal procedures (2a-2d). Place threatened vessel in new containment drum. Contact Hazardous Waste Contractor if needed.

Response to release: Activate Hazardous Material internal procedures. Contact Fire Department. Obtain containment vessel kit from Security or

Engineering, contain spill, clean up spill with protective clothing and place into approved containment drum. Contact Hazardous Waste Contractor if needed.

3) **Abatement**

- a) Procedure is the same as described above, only with Hazardous Waste Contractor playing a larger role. Hilton Hotels Corporation may also be more involved regarding legal and/or media issues.

If evacuation is required the following steps will be taken.

- In the event of an internal or external disaster, employees are notified through the long range pager system, two-way radios and the public address paging system.
- After the employees receive notice, they are instructed to meet at the pre-determined location, the Catering Office, for further instructions.
- The ERT members assign floor monitors to start the evacuation procedures on each guest floor. Two floor monitors per guest floor will knock on doors and monitors stationed in stairwells will assist guests to safe area-Southeast corner of parking lot.
- The ERT members will assign additional staff to evacuate all meeting and function rooms, pool areas, employee back of house areas and the restaurant.

RECORDKEEPING

Storage and documentation of training materials and records is as follows:

- In Human Resources Office:
 - Current employees' training records, retained indefinitely
 - Former employees' training records, retained for three years after termination
 - Copy of training programs, introductory and continuing
- In Engineering Shop:
 - Current copy of Consolidated Contingency Plan
 - Reported hazardous material releases
 - Hazardous materials storage area inspection reports
 - Emergency response drill documentation
 - Copy of training programs, introductory and continuing

HAZARD COMMUNICATION TRAINING PROGRAM

1. GENERAL

The OSHA Hazard Communication Standard (HCS) requires employers to prepare and implement a Hazard Communication Program (HCP). This written program is a summary of the Hilton Burbank Airport efforts and provides a reference for employees and management. A copy of this program will be filed in the Material Safety Data Sheet (MSDS) binder located in the employee entrance. The binder shall be made available to any employee upon request.

2. RESPONSIBILITIES

- A. The Director of Property Operations, Bill Gregory shall be responsible for the overall administration of the program, ensure all aspects of the program are utilized properly to comply with the HCS, and provide assistance to all departments in regard to compliance with the HCS. This person is designated as the Hazard Material Coordinator (HMC).
- B. The HMC is responsible for the day-to-day compliance with HCS, maintaining the MSDS Binder, maintaining the Chemical List, issuing HazCom Update Memos, determining label data, and conducting compliance inspections at intervals and locations determined by the HMC, Director of Security and/or the Safety Committee.
- C. Director of Security, Chuck Williams and Members of the Safety Committee, along with Department Heads are responsible for compliance to the HCS within their departments. They shall ensure hazardous materials are not used by department employees until employees have successfully completed the Chemical Hazard Identification Program (CHIP) training, MSDS forms are on file, personal protective equipment (PPE) is available, employees trained on use of required PPE, and initiating disciplinary actions against department employees for non-compliance to the HCP. Employees with three documented infractions can be terminated. All Departments shall request an MSDS, as a Hazard Communication Program Condition of sale, for appropriate material. All MSDS received by any department shall be forwarded immediately to the HMC. The HMC shall be informed when a hazardous material is received without an MSDS. Each Department Manager shall be responsible for conducting HazCom and Chemical Safety training prior to employee use of a hazardous material. The HMC, Director of Security or members of the Safety Committee can assist if necessary.
- D. Employees who use hazardous material shall not use the material until they have successfully completed the training, checked the container label, checked the MSDS, and are using the PPE specified on the label. Employees shall use chemicals as directed and will not mix chemicals without supervisory permission. After taking appropriate first aid action, employees shall report personal exposure with hazardous material to the HMC.

3. HAZARD DETERMINATION

- A. Prior to use, all chemicals used at our facility will be evaluated in regard to physical and health hazards. Our facility will rely upon supplier-provided MSDS for the hazard determination. The provided MSDS will be reviewed for completeness by the HMC. The HMC shall make appropriate usage recommendations or develop a Special Work Practice/Procedure (S form) in regard to safe use of the chemical by employees.

4. MATERIAL SAFETY DATA SHEETS

- A. An MSDS form is to be obtained and on file in the MSDS Binder before a chemical is used by any employee. The MSDS will be filed by area of usage (i.e. – Laundry, Kitchen, etc.), and then alphabetically. The HMC is the only person permitted to add or remove MSDS forms from the binder. The (S) form, when required, shall be attached to appropriate MSDS. In the event an MSDS is not received with a chemical or the MSDS is not complete, the HMC will request an MSDS form from the manufacturer of the product. The MSDS binder shall be readily accessible to all employees. Employees need to obtain their supervisor's permission to review the MSDS. The Main MSDS binders are located at the employee entrance. Each Department has their own binder (or folder) which lists chemicals specific to their area or job function.

5. CHEMICAL LIST

- A. A list of hazardous chemicals shall be maintained by the HMC and distributed to all departments. Each employee shall receive a copy of the current Chemical List during the initial training. The list shall be reviewed for accuracy annually, updated and distributed by the HMC to each department. The current list will be posted in the appropriate work areas. The list shall contain all chemicals by department/work area, including the alphanumeric codes, common names, hazard severity ratings, PPE requirements, odors, physical appearance and indications of any carcinogenic/chronic health hazards. When a chemical is deleted from the list, the HMC shall draw a line through the deleted chemical and date and initial the line. When a new chemical hazard is added to our facility, the HMC will add the Chemical to the list and mark the chemical with an asterisk (*). The new Chemical List will also be filed in each MSDS binder. A file of old Chemical Lists and HazCom Update Memos shall be maintained by the HMC to meet the exposure records requirement of 29CFR1910.20.

6. LABELING

- A. Manufacturing labels will not be removed, defaced or covered. Except as described below, all containers in use are to be labeled with completed CHIP label. Containers include drums, large cans, large bottles, boxes, etc. Department Heads are responsible for affixing completed labels if necessary. Chemicals in containers must not be used until the label is affixed. The exceptions to this requirement are:
1. Portable containers do not require labels when chemicals are transferred from labeled containers for immediate use, provided the chemical will be used by the employee who performs the transfer and will be used during the employee's shift.
 2. Smaller containers do not require labels when they are removed from a labeled box or labeled rack, provided they will be used immediately by the employee who removed the containers and the material will be used during the employee's shift.
 3. If chemicals in an unlabeled container have not been completely used at the end of the employee's shift, the chemical must be returned to a labeled container, box or rack.
- B. As a general rule, pipes in our facility will not be labeled as they generally contain non-hazardous liquids and are only opened by maintenance personnel who are aware of the pipe contents.
- C. Employees must be able to identify the health, fire and reactive hazards of the container contents by reading the label. The affixed label will be the standard CHIP label and must provide the following information:
1. The identity of the hazardous chemical in the container. Identification shall be through the use of alphanumeric codes such as C-016 or F-114. The alpha part of the code will indicate the specific physical and/or health hazards the chemical presents. The codes used will be "C" for Corrosive, "R" for Reactive, "I" for Irritant, "F" for Flammable, "T" for Toxic and "S" for Sensitizer (CRIFTS). In the event a chemical presents more than one hazard, both codes shall be indicated, such as a chemical which is Corrosive and Reactive will be designated "CR". The first letter will indicate the most severe hazard. The numeric part of the code will indicate a specific chemical within the category. Large storage areas, such as labeled racks or boxes of small containers, must also list the common name of the chemical on the label. The alphanumeric code will also be on the Chemical List and MSDS.

2. Appropriate warning hazards. The immediate physical and health hazards shall be indicated by colored bands (Red = Fire, Blue = Health, Yellow = Reactive) on the label. The severity of the immediate chemical hazards will be indicated by the numbers "0 through 4", with a "4" indicating the most severe hazard rating. These acute hazard ratings do not include all hazards, but only the hazards that influence immediate safety considerations. Chemicals, which present chronic or carcinogenic health hazards, will be indicated with a circled letter "C" on the label.
3. Personal Protective Equipment (PPE). Required PPE will be indicated on the label by symbols. Each symbol will represent a specific item of PPE that must be used to prevent the employee's immediate exposure to the chemical.
4. All chemicals, which require a Special Work Practice/Procedure (S) will be marked with the circled letter "S" on the label.

7. CONTRACTORS

- A. Contractors working in facility areas where hazardous chemicals are used will be informed of the hazards within the area. The HMC will provide a contractor representative with copies of the current Chemical List and a brief description of how to read a "CHIP" label. The contractor is responsible for making his/her employees aware this information. Questions related to the hazardous chemicals shall be addressed to the HMC. Contractors will be required to provide a list (or copies of MSDS) of the hazardous chemicals they will use in our facility to the HMC. The HMC shall review the provided list/MSDS to ensure that there are no chemicals prohibited by our facility.

8. EMPLOYEE INFORMATION/TRAINING

- A. Posters. These will describe the hazards, severity of the hazards, PPE symbols, MSDS binder locations and hazards represented by the letters C, R, I, F, T and S. The posters will be posted in departments where hazardous material is present and in employee common areas. Employees will be provided "training examples" copies of the posters during training.
- B. HazCom Update Memos. These memos shall be used to alert employees to new chemical hazards which are introduced into the work area or when new hazard information is received. The memo format will include a completed label, the user location of the chemical, routes of entry, the hazards of the product, first aid procedure, symptoms of exposure, the physical characteristics of the chemical, indication of chronic or carcinogenic hazards, and post/pull dates. Each memo shall be posted two weeks. A "training example" of the memo will be provided to employees during training.
- C. Other Information. Employees shall be provided with a copy of the current Chemical List and trained on how to read a "CHIP" label.

D. Employee Training. Employees must successfully complete the required training program before they use any hazardous chemical. All employees, who routinely use chemicals in the performance of their job, shall complete the training. The training program has two parts: Hazard Communication and Chemical Safety.

1. The Hazard Communications portion of the training will include, as a minimum:

- A. Details of our facility's HCP;
- B. An explanation of the labeling system;
- C. An explanation of the MSDS;
- D. An explanation of how employees can obtain and use the hazard information;
- E. Methods which can be used to detect the presence or release of a hazardous chemical in the workplace; and
- F. Hazard categories of chemicals we use.

2. The Chemical Safety portion of the training will include, as a minimum:

- A. The physical and health hazards of chemicals in our facility;
- B. Routes of entry into the body and physical effects;
- C. Symptoms of exposure;
- D. Measures, including PPE, employees can take to protect themselves from the hazards; and

**SUBJECT: 00247 - HILTON BURBANK AIRPORT/CONVNTN CNTR
2500 N HOLLYWOOD WAY, BURBANK**

In July 1997, the City of Burbank became part of the Los Angeles County Certified Unified Program Agency (LACoCUPA). The LACoCUPA consolidates six environmental programs. The City of Burbank is responsible for the management of four of these six programs. They include Underground Storage Tanks, Hazardous Materials Disclosure and Response, Risk Management, and enforcement of the Hazardous Materials Management requirements of the Fire Code.

California Health & Safety Code, Chapter 6.95, Article 1 and Burbank Municipal Code § 9-2-8001-3.3 require all businesses that store, use, or handle hazardous materials in quantities that meet or exceed the thresholds established in Health & Safety Code §25503.5, must submit a completed hazardous materials inventory disclosure statement annually. Our records indicate that you meet these requirements.

Enclosed you will find the following forms which you are required to complete and submit to us by March 1, 2006:

THE FACILITY INFORMATION SECTION

Everyone is required to submit their signed Facility Information for 2006. This form has been filled out with the information we currently have on file. If there are any blanks, please complete this information. If there are any changes, please cross out the filled in information and write in your new information.

THE HAZARDOUS MATERIALS SECTION

Everyone is required to complete and submit their Hazardous Materials Inventory for 2006 (once every three years). Our last general request for these forms was in 2000. **Once we have received these properly completed forms**, we will send you a letter each year asking you to certify that the information previously submitted is currently correct. Only comprehensive Hazardous Materials Inventory Reports are to be submitted. No recertification forms are to be submitted in 2006. Please refer to the Notes below to facilitate completing the forms correctly.

00247 - 2500 N HOLLYWOOD WAY

January 9, 2006

Page 2

NOTE #1: The Largest Container (Box #215) should reflect the amount of your largest container for a particular chemical, i.e., if you have three different size containers for window cleaner which are 5 Gallons, 10 Gallons, and a 55 Gallon Drum, your largest container would be 55 Gallons.

NOTE #2: The Maximum Daily Amount (Box #218) for the above referenced chemical would be 70 Gallons, which would be the total of the three containers (55+10+5). Even if your containers are not full, this would be the Maximum Daily Amount because it is the maximum amount you could have if the containers were full.

THE CONSOLIDATED CONTINGENCY PLAN SECTION w/SITE MAP

Everyone is required to properly complete, sign, and submit a Consolidated Contingency Plan and Site Map for 2006 (once every three years). Our last general request for these forms was in 2003.

These Hazardous Materials Inventory Disclosure forms are currently part of a Consolidated Permit Package issued by the Los Angeles County Certified Unified Program Agency (LACoCUPA). Please carefully read the instructions, complete the appropriate forms, and sign where indicated. Return **ORIGINAL** forms to the Burbank Fire Department by **March 1, 2006**. Failure to submit properly completed Hazardous Materials Disclosure forms by the due date could result in civil penalties. A self-addressed envelope is enclosed for your convenience. **BE SURE TO RETAIN A COPY FOR YOUR RECORDS.**

If you have any questions or if we can be of any assistance, please contact the Fire Prevention Bureau at (818) 238-3475.

Thank you for your cooperation.

We received NOTICE OF ENFORCEMENT – PAST DUE (PENALTY CHARGE) for the fiscal year Jul 01, 2005 – June 30, 2006. We believe this invoice was processed in error. According to the post office, the payment which this charge references to was delivered to your PO BOX 513148, Los Angeles, CA 90051-1148 on Dec. 14th 2005. For your review I have enclosed a copy of the registered mail delivery receipt we received from the post office. It would be greatly appreciated if you revise the invoice and notify us of the status as soon as possible.

Thank you for your cooperation.

**FIVE-YEAR REVIEW REPORT FOR
SAN FERNANDO VALLEY (AREA 1) SUPERFUND SITE
NORTH HOLLYWOOD AND BURBANK, LOS ANGELES COUNTY,
CALIFORNIA**

PREPARED BY

United States Army Corps of Engineers

FOR

U.S. Environmental Protection Agency

Region IX

Approved by:

Dana Barton
Dana Barton, Assistant Division Director
Superfund Site Cleanup Branch
U.S. Environmental Protection Agency, Region 9

Date:

9/21/18

[This page is intentionally left blank.]

Executive Summary

This is the third combined Five-Year Review of the San Fernando Valley Area 1 Superfund Site located in North Hollywood and Burbank, Los Angeles County, California. The purpose of this Five-Year Review is to review information to determine if the remedy is and will continue to be protective of human health and the environment.

The San Fernando Valley Area 1 Site has two groundwater operable units, the North Hollywood Operable Unit and the Burbank Operable Unit, located within its boundaries. This Five-Year Review represents the sixth Five-Year Review for the North Hollywood Operable Unit and the fourth Five-Year Review for the Burbank Operable Unit. The triggering action for this statutory review is the previous Five-Year Review. The Five-Year Review is required due to the fact that hazardous substances, pollutants, or contaminants remain at the Site at levels above those that would allow for unlimited use and unrestricted exposure.

In September 2009, EPA selected the following interim remedy for the North Hollywood Operable Unit: construction of new extraction wells; modification/rehabilitation of several existing extraction wells; expanded treatment; chromium treatment for NHE-1, NHE-2 and two of the new extraction wells; 1,4-dioxane treatment for NHE-2; installation of additional monitoring wells; institutional controls; and, use of the treated water in Los Angeles Department of Water and Power's water supply system. EPA subsequently amended this remedy in 2014 via a Record of Decision Amendment to add reinjection as an end use, and in 2017 via a Memorandum to File to add more extraction wells targeting 1,4 dioxane contamination. EPA recently issued an Explanation of Significant Differences in February 2018, which increases the groundwater extraction rate by adding new extraction wells and expanding the treatment system to accommodate the higher flow from the new wells. EPA determined that increased groundwater extraction would be required to achieve containment. None of these remedy enhancements have yet been implemented.

For the Burbank Operable Unit, EPA's selected remedy in the June 1989 Record of Decision included: extraction of contaminated groundwater, treatment by stripping, and reuse of the water by the City of Burbank for drinking water. Subsequently, EPA signed two Explanation of Significant Differences: November 1990 and February 1997. The 1990 Explanation of Significant Differences included blending of the extracted and treated groundwater with a water supply lower in nitrate, reinjection of excess water, and a clarification that the interim remedy could be designed, constructed, and operated in phases. In the second Explanation of Significant Differences, EPA eliminated the reinjection requirement and suspended the extraction rate requirement when nitrate levels in the extracted groundwater exceed 50 milligrams per liter (mg/l) as nitrate. The City of Burbank committed to accept an annual average of 9,000 gallons per minute (gpm) from interim remedy facilities.

For the Burbank Operable Unit, the results of the data review and the 2015 capture analysis indicate the remedy functions as intended, by meeting the Remedial Action Objectives specified in the Record of Decision; however, the treatment system continued to operate below the interim Record of Decision specified extraction rate of 9,000 gpm. Capture of the contaminated plume is occurring, and the appropriate extraction rate is being evaluated in a new focused feasibility study. An interconnect with Los Angeles Department of Water and Power (LADWP) is under construction, which will provide enough capacity to discharge up to 9,000 gpm, the current capacity of the treatment system. A Focused Feasibility Study is currently underway to address emerging contaminants and to optimize the remedy.

The North Hollywood Operable Unit is not currently operating, and is therefore not achieving capture. EPA recently revised the remedy, and expects capture will be achieved when the revised remedy is implemented.

Exposure assumptions, toxicity data, and Remedial Action Objectives used at the time of remedy selection are still valid for both remedies. Applicable or relevant and appropriate requirements identified in the Record of Decision have not changed since the last Five-Year Review. Toxicity values for Site contaminants of concern have not changed. Risk assessment methodologies have not changed in a way that could affect the protectiveness of the remedy. There are no changes in exposure pathways. The combined remedial action objectives are still valid.

The remedy at the North Hollywood Operable Unit is currently protective of human health and the environment because there is no exposure to untreated groundwater. Despite the fact that the extraction and treatment system is not currently operating, the public is not exposed to untreated groundwater because LADWP is not extracting groundwater from the areas of high contaminant concentrations and governmental controls prevent other extraction of the groundwater. When the system was operational, the treatment system effluent contaminant concentrations were less than their regulatory cleanup goals. Once the new remedy is implemented, EPA expects that all Remedial Action Objectives will be achieved.

The remedy at the Burbank Operable Unit is currently protective of human health and the environment. The treatment system effluent contaminant concentrations are less than their regulatory cleanup goals and there are governmental controls in place that prevent exposure to untreated groundwater.

1. Introduction

The purpose of a Five-Year Review (FYR) is to evaluate the implementation and performance of a remedy in order to determine if the remedy will continue to be protective of human health and the environment. The methods, findings, and conclusions of reviews are documented in FYR reports. In addition, FYR reports identify any issues found and document recommendations to address them.

The U.S. Environmental Protection Agency (EPA) is preparing this FYR pursuant to the Comprehensive Environmental Response, Compensation, and Liability Act Section 121, 40 Code of Federal Regulation (CFR) Section 300.430(f)(4)(ii) of the National Contingency Plan and EPA policy.

This is the third FYR for the San Fernando Valley (Area 1) Superfund Site (Site). The triggering action for this statutory review is the signing of the previous FYR on September 30, 2013. The FYR has been prepared due to the fact that hazardous substances, pollutants, or contaminants at the Site remain above levels that allow for unlimited use and unrestricted exposure.

The Site consists of two operable units¹ (OUs): the North Hollywood Operable Unit (NHOU) and the Burbank Operable Unit (BOU). Both will be addressed in this FYR. Volatile organic compound (VOC)-contaminated groundwater in the North Hollywood area is addressed for the NHOU. The VOC-contaminated groundwater plume in the Burbank area is addressed for the BOU.

Kelly Manheimer and Gary Riley, Remedial Project Managers from EPA, led the Site FYR. Alison Burcham (environmental engineer) and Jeffrey Weiss (hydrogeologist), from the U.S. Army Corps of Engineers (USACE), participated.

¹ During cleanup, a site can be divided into a number of distinct areas depending on its complexity. These areas, called operable units (OUs), may address geographic areas, specific problems, or media where a specific action is required.

Author affiliation: EPA		
Review period: 10/17/2017 - 8/2/2018		
Date of site inspection: 1/24/2018		
Type of review: Statutory		
Review number: 3		
Triggering action date: 9/30/2013		
Due date (five years after triggering action date): 9/30/2018		

1.1. Background

The San Fernando Valley Area 1 Superfund Site (SFV Area 1) consists primarily of two large plumes from multiple sources in the San Fernando Valley. Site contaminant sources include, but are not limited to, the former Bendix Aviation and Allied Signal-Aerospace Company facilities in North Hollywood (successor cooperation is now Honeywell International), the former Lockheed Martin Corporation facilities near the Burbank Airport, and many other known sources throughout Area 1. Trichloroethene (TCE) and tetrachloroethene (PCE) were widely used in the San Fernando Valley starting in the 1940s for dry cleaning and for degreasing machinery. Disposal was not well-regulated at that time, and releases from a large number of facilities throughout the eastern SFV Area 1 have resulted in the large plume of VOC-contaminated groundwater that starts in the Area 1 Site and extends southeast, down-gradient, through the San Fernando Valley Superfund, Area 2 Site and through the San Fernando Valley Superfund, Area 4 Site.

Further investigation to define other sources is ongoing. SFV Area 1 is in a populated urban area, and does not affect any environmentally sensitive areas.

1.2. Physical Characteristics

The Site is an area of VOC-contaminated groundwater that encompasses approximately 13 square miles beneath the Cities of North Hollywood and Burbank in the eastern San Fernando Valley, within the Upper Los Angeles River area.

The San Fernando Valley is a 122,800-acre alluvial basin in the south-central portion of the Transverse Ranges. The San Fernando Valley is bordered on the northeast by the San Gabriel Mountains with the Verdugo Mountains to the southeast, on the north and northwest by the Santa Susana Mountains, on the west by the Simi Hills, and on the south by the Santa Monica Mountains. Average annual precipitation in the San Fernando Valley is approximately 15 inches per year. However, during water years 2006 to 2007 and 2013 to 2014 (October 1 to September 30), precipitation was well below average, at less than 5 inches.

The two OUs located within the Site, North Hollywood Operable Unit (NHOU) and Burbank Operable Unit (BOU), each have a groundwater extraction and treatment system (Figure 2). The treatment facility for the NHOU is located west of Lankershim Boulevard in North Hollywood. There are eight extraction wells associated with the treatment system. The NHOU treatment facility is approximately 3.8 miles north of the Los Angeles River.

The treatment facility for the BOU is located southeast of the airport in Burbank. There are eight extraction wells associated with the BOU treatment facility located approximately half a mile north of the BOU. The BOU treatment facility is located approximately 3.5 miles north of the Los Angeles River.

Figure 1. Location Map for the San Fernando Valley (Area 1) Superfund Site

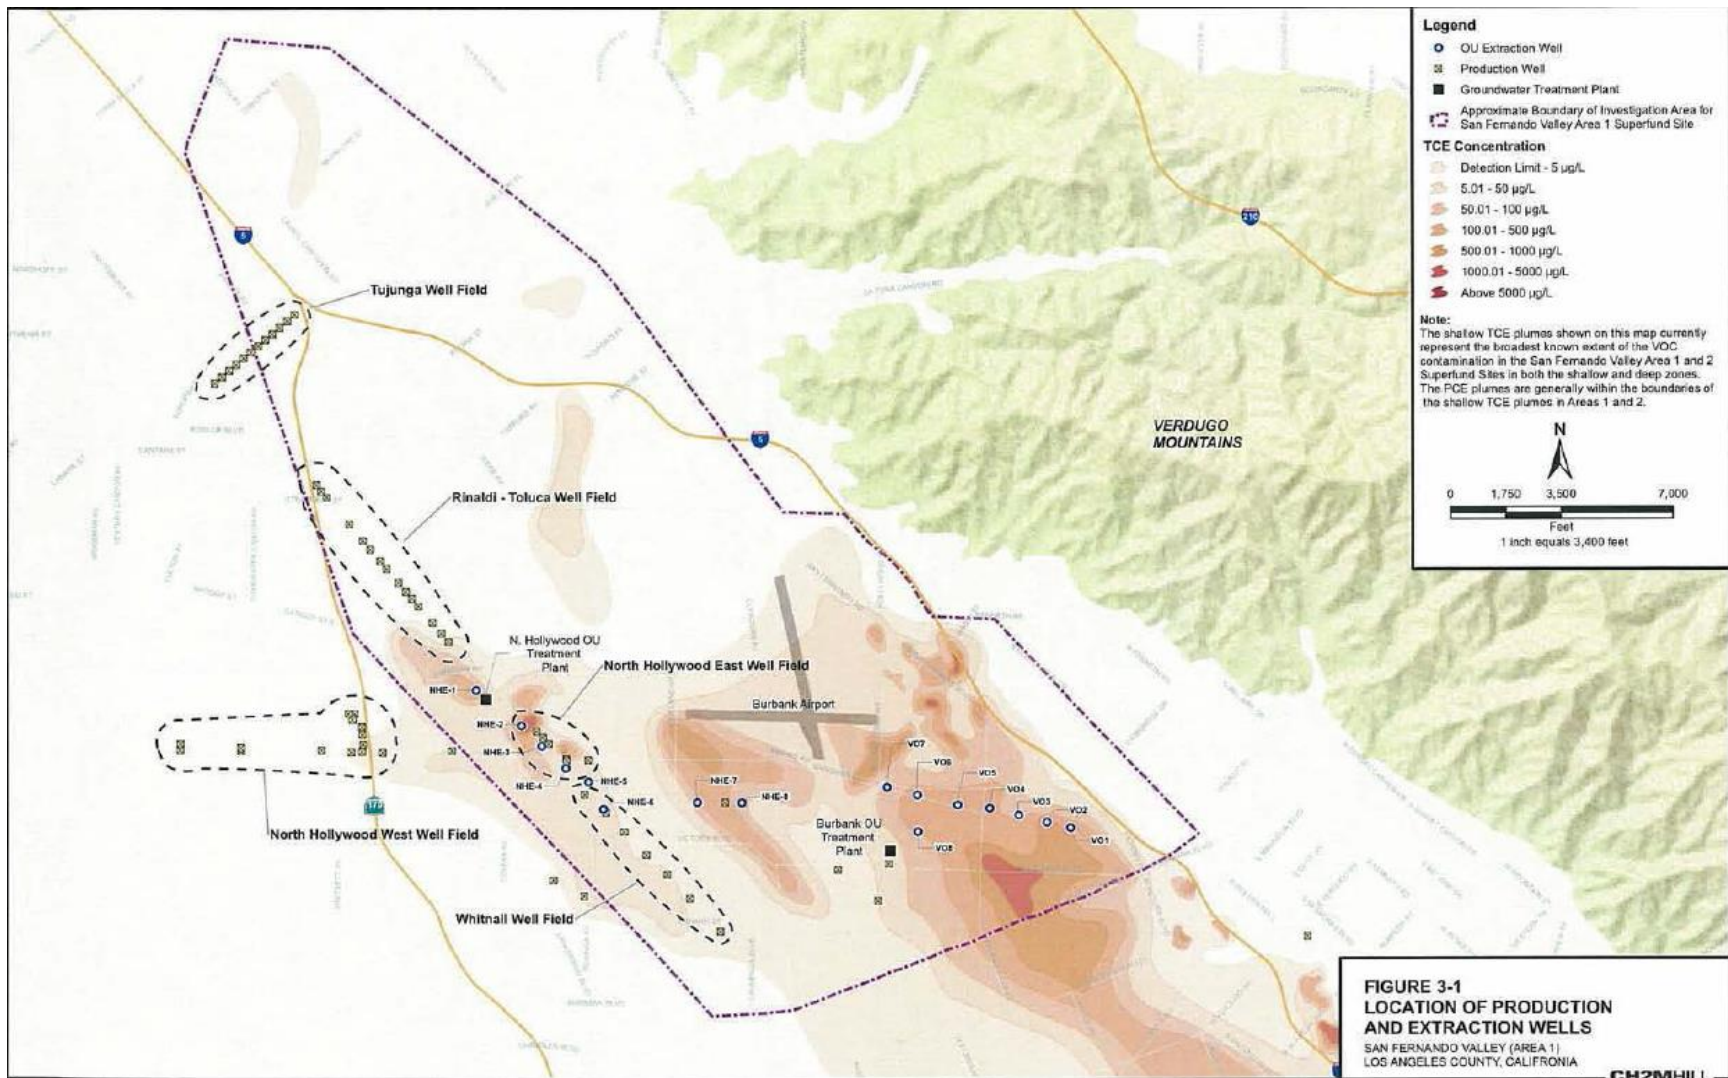

Figure 2. Location of Wells and Treatment Plants

1.3. Hydrology

Alluvial deposits in the San Fernando Basin contain groundwater. Geologic investigations at the Site have defined several hydrostratigraphic units within these alluvial deposits. The primary contaminated units at the Site are the Water Table aquifer and the B-zone aquifer. The Water Table aquifer is an unconfined aquifer within the coarse-grained sands and gravels present up to 350 feet below ground surface, and overlies a leaky aquitard consisting of interbedded sands, silts, and clays. Beneath the aquitard is the B-zone aquifer, which consists of coarse-grained sands and gravels from about 350 to 425 feet below ground surface. The depth to groundwater ranges from approximately 120 to 425 feet below ground surface.

Table 2. Comparison of stratigraphic and hydrostratigraphic units in the SFV Area 1

Approx. Depth (feet)	Geologic Age	JMM (1992) Zone Designation	ULARA Watermaster Units	Oberlander, et al. (1993) units	Depth Region	NHOU Hydrostratigraphic Units ¹
100	Holocene	Upper	A - alluvial sand, gravel, and rocks		1	A Zone (Water Table)
200			L - gravel			
300			K, J - fine grained	A' - coarse sands, gravel, cobbles

800	Upper Pliocene	Deeper Units			4	Deeper Units
900						
1000						

Natural horizontal hydraulic gradients in the eastern San Fernando Valley generally run south and east, toward the Los Angeles River Narrows. However, extraction and production wells in the NHOU and BOU affect the gradient, and draw the flow of groundwater toward these wells. Figure 3 is a recent groundwater elevation map that shows the gradient in the Water Table aquifer within the BOU. Groundwater gradients in the SFV Area 1 were estimated during the Remedial Investigation to range from approximately 0.001 to 0.021. The 2016 Groundwater Elevation Memorandum (Tetra Tech, 2016) for the Burbank Operable Unit reported the groundwater gradient near the BOU extraction wells between 0.0023 and 0.0139.

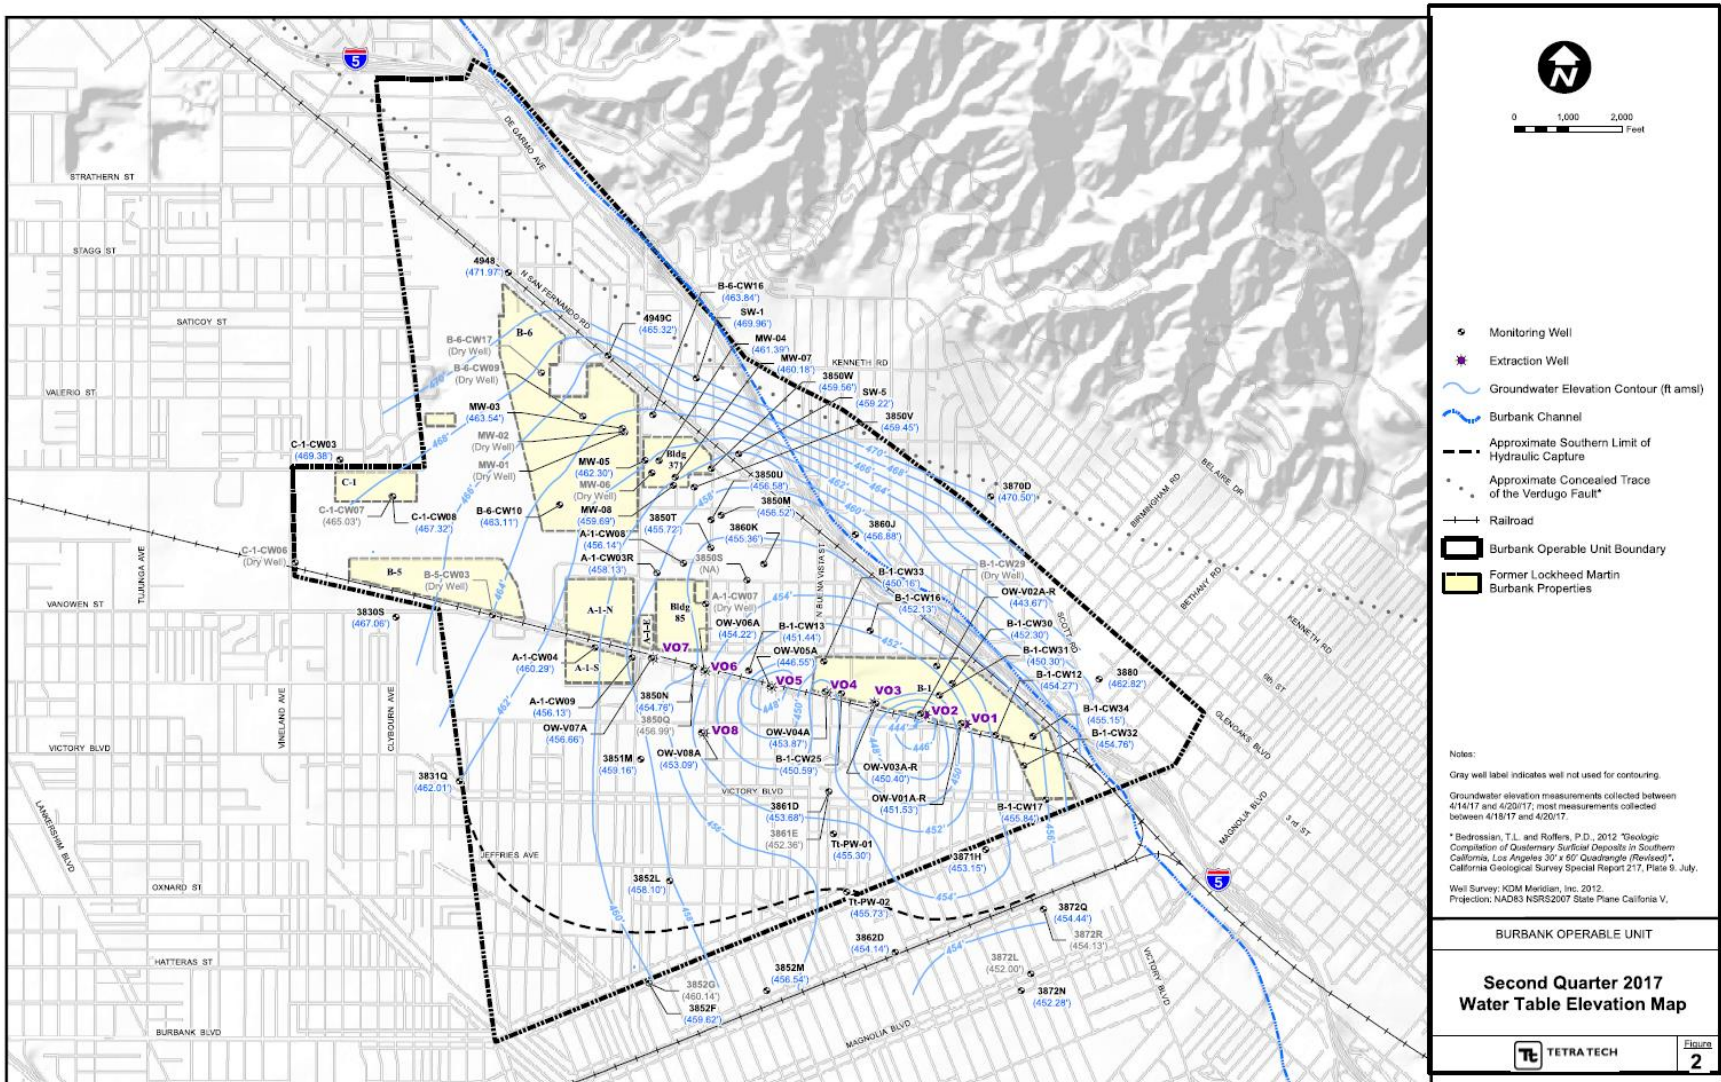

Figure 3. Burbank Operable Unit Groundwater Elevations in the Water Table Aquifer

2. Remedial Actions Summary

2.1. *Basis for Taking Action*

The presence of TCE and PCE in Site groundwater, at concentrations above their respective maximum contaminant levels (MCLs), provided the basis for taking action. The risk is to human health from potential ingestion of drinking water. TCE and PCE are probable human carcinogens. Carbon tetrachloride, 1,2-Dichloroethane, and arsenic are also found in Site groundwater, and contribute to carcinogenic risk. The primary threat to human health is ingestion.

Groundwater is at least 120 feet below the ground surface, so contaminated groundwater does not interact with Site surface water. Thus, ecological risk posed by contaminants in groundwater is negligible.

2.2. *Remedy Selection*

2.2.1. NHOU

EPA signed the first interim Record of Decision (ROD) for the NHOU in September 1987. The selected interim remedy addressed VOC-contaminated groundwater in the North Hollywood area. Due to the large area and complexity of the Site, EPA and the State of California split responsibility for cleanup, with EPA responsible for oversight of regional groundwater remediation and the State's Los Angeles Regional Water Quality Control Board responsible for source investigation and remediation. The cooperative agreement that formalized this arrangement is still active.

In the 1987 ROD, EPA selected groundwater extraction, treatment of VOCs by air stripping and disinfection with chlorine, and conveyance of the effluent to the North Hollywood Pumping Station Complex as the remedy. The effluent was then blended with water from the Los Angeles Aqueduct Filtration Plant, water purchased from the Metropolitan Water District, and groundwater from other Los Angeles Department of Water and Power (LADWP)-operated pumping fields in the vicinity of the NHOU prior to being served to consumers. VOCs in emissions from the air stripper are treated by vapor phase granular activated carbon (VPGAC) prior to discharge to the atmosphere.

EPA signed a second Interim Action ROD for the NHOU in September 2009. The Remedial Action Objectives (RAOs) are:

- Prevent exposure to contaminated groundwater above acceptable risk levels.
- Contain areas of groundwater with contaminant concentrations that exceed the MCLs and notification levels to the maximum extent practicable.
- Prevent further degradation of water quality at the Rinaldi-Toluca and North Hollywood West production wells fields by preventing the migration toward these well fields of the more highly contaminated areas of the VOC plume located to the east/southeast.

- Achieve improved hydraulic containment to inhibit horizontal and vertical contaminant migration in groundwater from the more highly contaminated areas and depths of the aquifer to the less-contaminated areas and depths of the aquifer, including the southeast portion of the NHOU in the vicinity of the Erwin and Whitnall production well fields.
- Remove contaminant mass from the aquifer.

The second interim remedy for the NHOU requires an extraction well network and above-ground treatment system to contain and remediate contaminated groundwater. The selected remedy includes extraction and treatment of contaminated groundwater at certain locations within the plume, expanded treatment for VOCs, and additional treatment for chromium and 1,4-dioxane. It also includes a groundwater management plan as an institutional control to ensure nearby water supply production well pumping does not negatively impact NHOU remedy performance. Components of the remedy include:

- Construction of new extraction wells.
- Modification/rehabilitation of several existing extraction wells.
- Expanded VOC treatment.
- Chromium treatment for extraction wells NHE-1, NHE-2, and two of the new extraction wells.
- Installation of additional monitoring wells.
- Institutional control (Groundwater management plan)
- Use of the treated water in LADWP's water supply system.

In 2014, EPA issued a ROD amendment allowing re-injection of treated water into the aquifer, in addition to delivering treated water to LADWP. EPA had concluded that re-injection of the treated groundwater might be necessary if LADWP and the NHOU potentially responsible parties are unable to reach an agreement that is acceptable to EPA regarding terms for delivery and acceptance of the treated water. This Amended Remedy ensures that EPA has the flexibility to design the most effective remedy and implement that remedy without significant delay. Although this ROD Amendment allows re-injection as an additional end-use option, it does not specify which end use will be implemented. Consequently, both the drinking water and the re-injection end uses are considered part of EPA's Preferred Alternative in the Amended Remedy.

In 2016, EPA determined that additional extraction wells were necessary to protect the North Hollywood West production wellfield from 1,4-dioxane contamination, and issued a Memorandum to File which clarified that these wells were part of the required remedy.

EPA subsequently issued an Explanation of Significant Differences (ESD) in February 2018, which expanded the amount of water extracted by the remedy. After reviewing additional groundwater data collected since 2009 and securing LADWP's and the City of Burbank's cooperation regarding its planned groundwater extraction rates and potential use of LADWP and Burbank extraction and conveyance infrastructure, EPA determined that increased groundwater extraction in the NHOU could practicably achieve greater containment than the remedy selected in the 2009 ROD. Requirements in the ESD include:

- Addition of new extraction wells.
- Diversion of four wells to the Burbank Operable Unit for treatment.
- Expansion of the NHOU treatment plant to accommodate the additional flow created by the new wells.

2.2.2. BOU

EPA signed the interim ROD for the BOU in June 1989. The selected interim remedy addressed the VOC-contaminated groundwater plume in the Burbank area. The two RAOs used to select the remedy are:

- To partially control the movement and spread of groundwater contaminants in the Burbank Operable Unit area, while contributing to aquifer restoration in the San Fernando Valley Basin Area 1 Superfund Site.
- To address the public health threat posed by contamination of the City of Burbank's public water supply wells by providing residents in the area with a water supply that meets state and federal drinking water standards.

The selected remedy includes extraction wells to pump groundwater to the treatment plant for VOC removal by air stripping followed by a liquid phase granular activated carbon (LPGAC) polishing step. The treated water is conveyed to the City of Burbank for municipal supply. The air stream is treated through VPGAC vessels prior to discharge to the atmosphere.

EPA signed an ESD in November 1990. The ESD concluded that, based on information suggesting high nitrate levels in the groundwater, additional measures were required to meet the MCLs for nitrate in the extracted and treated groundwater. EPA required blending of the extracted and treated groundwater with additional water from a water supply lower in nitrate, such that water served to the public would achieve the MCL. The resultant larger quantity of water raised the possibility that the City of Burbank would not have the capacity to accept the quantity of water produced. In the ESD, EPA required reinjection of excess treated water into the aquifer. Finally, the ESD clarified that the interim remedy could be designed, constructed, and operated in phases.

EPA signed a second ESD in February 1997. Based on additional study of the local groundwater system, an extraction rate of 9,000 gallons per minute (gpm) resulted in substantially the same level of groundwater containment as an extraction rate of 12,000 gpm (the rate called for in the 1989 ROD). Therefore, the interim remedy extraction rate was lowered to 9,000 gpm. EPA decided to eliminate the requirement for reinjection based on projections that the revised extraction rate would not produce excess water. In the second ESD, the City of Burbank committed to accepting an annual average of 9,000 gpm from the interim remedy facilities, contingent on water demand. Finally, EPA suspended the 9,000 gpm extraction rate requirement during times when nitrate levels in the extracted groundwater exceed 50 milligrams per liter. In these cases, the quantity of blend water required to meet the nitrate MCL could make extraction at 9,000 gpm infeasible.

2.3. Remedy Implementation

2.3.1. NHOU

Construction of the original NHOU treatment system was completed in March 1989 and operation commenced December 1989. The system consisted of eight groundwater extraction wells (NHE-1 through NHE-8), one air stripping tower to remove VOCs from the extracted groundwater, two vapor-phase granular activated carbon (VPGAC) adsorbers to remove VOCs from the air stream, and ancillary equipment. Each extraction well is approximately 300 feet deep (screened in NHOU Water Table aquifer) and has an approximate capacity of 300 gpm. Extraction well NHE-1 was never operated because of insufficient groundwater yield. A schematic of the NHOU groundwater treatment facility is shown in Figure 4.

Extracted groundwater fed through a 48-foot-tall packed air stripper (packing height of 22 feet) with a capacity of 2,000 gpm. After disinfection, treated groundwater was discharged into an LADWP blending facility where it combined with water from other sources before entering the LADWP municipal supply system. LADWP tests all treated water on a regular basis to ensure it meets all federal and state standards for drinking water. Both EPA and the State Division of Drinking Water oversaw treatment facility operations to ensure compliance with these standards.

This remedy was shut down in November 2017 due to declining water levels and maintenance issues, and will remain shut down until the new remedy can be designed and built.

Figure 4. Schematic of NHOU groundwater treatment facility

2.3.2. BOU

The treatment system for the BOU was completed in two phases. Construction of Phase I of the BOU treatment system occurred from 1993 to 1994, which included the installation of seven extraction wells capable of producing a combined flow of 6,000 gpm. Operation began in 1996. In Phase II, a new well was added to allow an increase in the groundwater extraction rate from 6,000 gpm to 9,000 gpm. The City's municipal supply well W-10 (also known as WP-180) was modified and incorporated into the interim remedy as BOU extraction well VO-8. Construction of Phase II of the BOU completed in December 1997 and operation commenced in 1998.

The treatment facility for the BOU is located southeast of Bob Hope Airport, and approximately 3.5 miles north of the Los Angeles River. There are eight extraction wells within a half-mile of the treatment facility, VO-1 through VO-8. Wells VO-1 to VO-7 are located north of the treatment plant in an east-west alignment. Well VO-8 is located between the treatment plant and the other wells.

Figure 5 shows a schematic diagram of the BOU groundwater treatment facility. A pipeline conveys the extracted groundwater to the BOU treatment system. The BOU air stripper treats contaminated groundwater and the air-stream then passes through a VPGAC system to remove VOCs prior to release to

the atmosphere. Treated groundwater (effluent from the LPGAC vessels) is then conveyed to the City of Burbank's Valley Forebay for distribution and storage, then to the blending facility. At the blending facility, the groundwater is blended with water from the Metropolitan Water District prior to distribution.

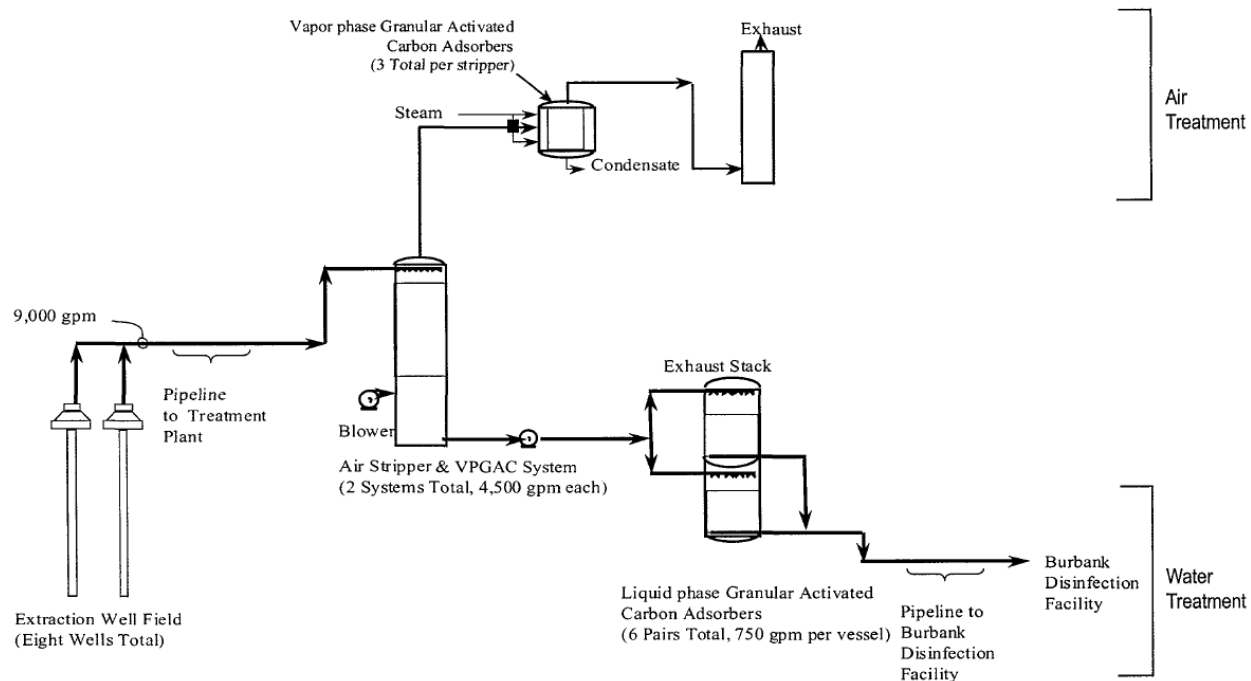

Figure 5. Schematic of BOU Groundwater Treatment Facility

2.3.3. Institutional Controls, for Both OUs

There are no specific institutional control instruments in place within Area 1, although there is an effective governmental control in place which prevents exposure to untreated contaminated groundwater. This governmental control is the 1979 Final Judgment in *Los Angeles v. San Fernando*, (Superior Court Case No. 650079) (*LA v. San Fernando*). The 1979 Final Judgment in *LA v. San Fernando* upheld the Pueblo Right of the City of Los Angeles to all groundwater in the ULARA Basin from precipitation within the ULARA and all surface and groundwater flows from the Sylmar and Verdugo Basins. 14 Cal. 3d 199 (1975). *LA v. San Fernando* also established the water rights of the cities of Los Angeles, Glendale, and Burbank to all water imported from outside the Basin and either spread or delivered within the Basin. With the exception of a few legacy entities including a few cemeteries and a hotel, only the Cities that are party to the Judgment have the authority to extract groundwater from the basin.

The Final Judgment created the entity known as "Watermaster" with full authority to administer the adjudication, under the auspices of the Superior Court. Under the final judgment in *LA v. San Fernando*, with the exception of certain minor historical water rights holders, only the cities of Los Angeles, Burbank, and Glendale are permitted to extract groundwater from the Basin. Each of these municipalities administers a public water system, which is regulated by the California State Water Resources Control Board, Division of Drinking Water.

Additional governmental controls on the use of groundwater as drinking water include EPA and State of California-promulgated MCLs and California State Action Levels that require drinking water standards to be met before delivery of the treated water to the potable water supply. These drinking water controls and the Watermaster's authority to regulate and allocate water resources eliminate unregulated use of area groundwater; therefore, the interim remedies are currently protective of human health.

2.4. *Operation and Maintenance (O&M)*

2.4.1. NHOU

LADWP has been conducting long-term operations and maintenance of the NHOU extraction and treatment system in accordance with the EPA-approved 1988 O&M plan, and the 2003 preventative maintenance schedule. LADWP provided quarterly reports to EPA detailing the operations and maintenance of the NHOU, and to the California State Water Resources Control Board, Division of Drinking Water on the quality of the water delivered from the system. As of November 2017, the extraction wells ceased to provide sufficient water for the treatment plant to operate, so the system was shut down.

2.4.2. BOU

The City of Burbank conducts long-term operations and maintenance activities for the BOU according to the O&M plan provided to EPA in 1998. EPA received a revised Operational Sampling Plan in 2017. This plan presents a treatment plant monitoring program that provides the data necessary to evaluate if the treatment plant is operating within permit conditions. The wider groundwater monitoring program intended to evaluate the near-field and far-field effects of the BOU extraction well field is conducted by the responsible party. The four primary objectives of the long-term groundwater monitoring program are:

- Verify containment of the 5 micrograms per liter ($\mu\text{g/L}$) tetrachloroethene (PCE) and 100 $\mu\text{g/L}$ trichloroethene (TCE) plumes in groundwater.
- Collect sufficient data to evaluate groundwater extraction system performance with respect to mass removal.
- Characterize the nature and extent of emerging compounds.
- Characterize the nature and extent of the primary chemicals of concern (PCE and TCE) to refine and update the conceptual site model.

3. Progress Since the Last Five-Year Review

3.1. Previous Five-Year Review Protectiveness Statement and Issues

The protectiveness statement from the 2013 FYR for the San Fernando Valley Area 1 Site stated:

The remedy at the NHOU is currently protective of human health and the environment because there is no exposure to untreated groundwater. The treatment system effluent contaminant concentrations are less than their regulatory cleanup goals and there are governmental controls in place that prevent exposure to untreated groundwater. However, to be protective in the long term, the existing treatment facility needs to be modified consistent with the remedy selected in the 2009 ROD, and chromium and 1,4 dioxane impacts to the remedy need to be addressed. The implementation of the selected remedy is in the design phase.

The remedy at the BOU is currently protective of human health and the environment because there is no exposure to untreated groundwater. Their treatment system effluent contaminant concentrations are less than their regulatory cleanup goals and there are governmental controls in place that prevent exposure to untreated groundwater. There is uncertainty as to whether containment capture is being achieved since the BOU pumps at rates less than those prescribed in the 1997 ESD. In order to make a containment determination the facility must operate at an average annual rate of 9,000 gpm, or BOU parties must demonstrate that containment can be achieved at lower pumping rates.

The 2013 FYR included three issues and recommendations. Each recommendation and the current status is discussed below.

Table 3. Status of Recommendations from the 2013 FYR

Operable Unit	Issue	Recommendations	Current Status	Current Implementation Status Description	Completion Date (if applicable)
BOU	According to the 1997 ESD, the City of Burbank is committed to accepting an annual average of 9,000 gpm of water from treatment facility, yet the annual extraction for the BOU is consistently less than 9,000 gpm, at average annual rates at or near 6,500 gpm.	A formal evaluation of pumping rates and contaminant capture should be conducted and presented to EPA if pumping rates less than 9,000 gpm is to be used to meet BOU ROD and ESD objectives.	Completed	Lockheed Martin completed a technical memorandum in 2015. EPA responded to the evaluation on August 9, 2016.	8/9/2016
NHOU	The Second Interim Remedy (2009) for the NHOU does not explicitly address treatment of chromium in well NHE-3. Well NHE-3 remains off-line pending an evaluation on how to best address chromium as part of the remedial design.	Address chromium contamination in well NH-3, and additional wells as needed.	Ongoing	Chromium treatment for NHE-3 was added in the 2018 ESD. The new system is currently in design, and there are agreements in place with the PRPs to construct the remedy once design is completed.	
NHOU	The notification level for 1, 4-dioxane has been exceeded at least once in all of the operating NHOU wells.	Sample the influent and effluent of the NHOU plant for 1, 4-dioxane and take appropriate actions to keep concentrations below the notification level.	Ongoing	The 2009 ROD addresses 1,4 dioxane, and treatment will be included in the new system. In addition, the 2016 Memo to File adds new wells to protect the NH West wellfield from 1,4 dioxane contamination.	

3.2. Work Completed at the Site During this Five-Year Review Period

3.2.1. NHOU

During this five-year review period, EPA issued an Explanation of Significant Differences in February 2018 to expand the treatment plant, add additional wells and to divert extracted water from four wells to the Burbank Operable Unit treatment plant. A Memorandum to the File confirmed the need for additional extraction wells to protect the North Hollywood West wellfield from 1,4 dioxane contamination.

In addition, design of the new system is approximately 60% complete. Construction of three new extraction wells has been completed, and construction of the treatment system is expected to be

completed within the next two years. Administrative orders are in place with the potentially responsible parties to complete design, construct and operate the interim extraction and treatment system.

As noted previously, on November 13, 2017, LADWP ceased all operation and maintenance activities in the NHOU First Interim Remedy. When the extraction wells and treatment system operated, the treatment system had significant maintenance issues. These issues are being considered and addressed in the new remedy design.

3.2.2. BOU

Since the completion of the last FYR, Lockheed Martin's contractor, Tetra Tech, completed a capture analysis and associated technical memorandum. Further details about this analysis are in the Data Review section. The City of Burbank updated the conference building and storage buildings at the treatment plant in the last five years, and switched the method for storing contaminants removed from the treatment system to allow for more simplified transportation. They are still configuring the final method for storing contaminants awaiting pickup.

In 2018, Lockheed Martin, under EPA oversight, started a Focused Feasibility Study to assess the current nature and extent of contaminants from the 1989 ROD and emerging contaminants identified since that time. The Focused Feasibility Study will evaluate the impact of emerging contaminants and optimize the remedy. The Focused Feasibility Study will also consider the diversion of four wells from the NHOU to the BOU treatment plant.

4. Five-Year Review Process

4.1. *Community Notification, Involvement and Site Interviews*

On June 27, 2018, a public notice was published in the *Los Angeles Daily News* announcing the commencement of the Five-Year Review process for the San Fernando Valley Area 2 Site, providing contact information for EPA's Remedial Project Managers, Kelly Manheimer and Gary Riley, and inviting community participation. The Five-Year Review report will be made available to the public once it has been finalized. Copies of this document will be placed in the designated public repositories: City of Glendale Public Library, 222 East Harvard St. Glendale, CA or call (818) 548-2021 and Los Angeles Public Library, 630 W. Fifth St., Los Angeles CA 90071 or call (213) 228-7000.

During the FYR process, interviews were conducted to document any perceived problems or successes with the remedy that has been implemented to date. The results of these interviews are summarized below.

During the site visit of the NHOU treatment plant, plant operators, maintenance personnel, and engineers from LADWP were interviewed. Because the treatment plant and extraction wells are not currently operational, most of the discussion focused on the planned upgrades to the system. The plant operators

felt the treatment system was effective when operational, and have relayed operational issues to EPA and other entities in a timely manner.

During the site visit to the BOU treatment plant, plant operators and maintenance personnel from Terranear PMC were interviewed. Overall, the treatment plant and remedy was working well. Within the past five years, two technical memorandums (Tetra Tech 2015 and Tetra Tech 2016) addressing the effectiveness of the capture zone were prepared. The interviewees feel these memorandums address the previous questions regarding the capture zone. Currently, the BOU plant cannot pump at capacity because they do not have sufficient demand in the City of Burbank water system for all of the treated water. However, a new interconnect is being installed between Burbank Water and Power and LADWP conveyance pipelines which will allow the Burbank Water and Power to provide water to LADWP.

Refer to Appendixes F and G for more details from the site inspections and interviews conducted during the site inspections.

4.2. Data Review

Data collected during the past five years were used to evaluate if the interim remedies at NHOU and BOU are meeting the RAOs and remain protective of human health and the environment. Data reviewed for this FYR included groundwater quality data from monitoring and extraction wells and groundwater elevation data from wells within SFV Area 1. The groundwater quality data included plume maps, annual monitoring reports, and monthly groundwater quality reports from the NHOU treatment plants. The groundwater elevation data was obtained from a capture zone study completed by Lockheed Martin within the Burbank Operable Unit and annual monitoring reports for the Burbank Operable Unit.

The data review focuses on how the data relates to the current remedy, which includes hydraulic capture, prevention of further groundwater degradation, and contaminant mass removal.

4.2.1. NHOU

During the past five years, groundwater extraction and treatment within the NHOU has removed contaminant mass and attained partial hydraulic capture through the use of six North Hollywood East (NHE) extraction wells. Mass removal was estimated using the influent PCE and TCE concentrations from the extraction wells and volume of water extracted. Containment of groundwater with concentrations that exceed the MCLs was evaluated by comparing plume maps from 2014 and 2017 and evaluating PCE and TCE trends at select wells during the past five years. The sections below discuss how data from this review period supports the question of whether RAOs are achievable in a reasonable timeframe. Appendix B includes data and trend analysis used for the evaluation.

4.2.2. NHOU Contaminant Mass Removal

Groundwater extraction and treatment within the NHOU has contributed to contaminant mass removal of VOCs, including PCE and TCE, during the past five years. Groundwater was extracted from six wells² in

² NHE-1 and NHE-5 are not used due to declining groundwater levels.

the North Hollywood East well field, including NHE-2, 3, 4, 6, 7 and 8. Groundwater from NHE-4, 6, 7 and 8 was treated at the North Hollywood Treatment Plant and delivered to the public water supply and groundwater from NHE-2 and NHE-3³ was discharged to the sanitary sewer due to elevated chromium concentrations. Figure 8 presents the total volume of water treated each month at the North Hollywood Treatment Plant and the estimated mass of PCE and TCE removed each month. Between March 2013 and June 2017, approximately 1.069 billion gallons of groundwater was treated for VOCs at the North Hollywood Treatment Plant and it was estimated that approximately 305 pounds of TCE and 65 pounds of PCE were removed from the treated water.

Estimated TCE/PCE removal was calculated by multiplying the average influent PCE and TCE concentrations for the past five years by the monthly volume of groundwater treated for the months where influent concentrations were not provided in the quarterly reports.

Figure 8. Estimated Mass of TCE and PCE Removed at North Hollywood Treatment Plant

³ NHE-2 and NHE-3 are operated by Honeywell and the volume of water extracted was not available when preparing this report.

4.2.3. NHOU Hydraulic Containment

A remedial action objective identified for the remedy in the 1997 ROD was to contain high-concentration areas of contaminated groundwater to the maximum extent practicable. The ROD specifically highlighted two areas in the NHOU where the remedy should prevent plume migration: the Rinaldi-Toluca and North Hollywood West production wells fields, and the Erwin and Whitnall production well fields. Hydraulic containment had not been achieved prior to the current five-year review period. Comparison of TCE and PCE plumes from 2014 and 2017 in Figures 8 and 9 indicate the North Hollywood West and Rinaldi-Toluca well fields continue to be impacted by the contaminant plume.

Figure 9. TCE Groundwater Plume above MCL

Figure 10. PCE Groundwater Plume above MCL

The contaminant plume for TCE and PCE had migrated into the Rinaldi-Toluca and North Hollywood West well fields prior to 2013. Prior to 2013, monitoring wells located near these well fields that contained TCE and PCE in excess of the 5 micrograms per liter ($\mu\text{g/L}$) MCL include RT-MW-04, RT-MW-06, NH-MW-06 and NH-MW-11. Within this area, it appears that the maximum concentrations of TCE and PCE may have peaked in 2015 at concentrations of 260 $\mu\text{g/L}$ and 140 $\mu\text{g/L}$ respectively. Since the completion of the previous FYR, the TCE and PCE concentration trends have been stable or decreasing in this area.

Table 4. Concentrations at the Rinaldi-Toluca and North Hollywood West well fields

Well ID	Date	PCE (µg/L)	TCE (µg/L)
NH-MW-06	5/15/2014	72	98
	12/16/2015	140	290
	12/1/2016	46.1	127
	8/10/2017	27.4	106
	9/14/2017	23.5	93.9
	Mann-Kendall	Decreasing	Stable
NH-MW-11	5/28/2014	52	32
	10/14/2015	17.3	170
	11/15/2016	35.6	104
	8/31/2017	5.3	10.6
	Mann-Kendall	Stable	Stable
RT-MW-06	6/25/2014	1.8	0.43
	10/18/2016	26.4	38.3
	7/25/2017	2.77	7.65
RT-MW-04	7/18/2014	3.1	2.9
	12/8/2015	1.45	3.09
	10/11/2016	0.718	2.45
	6/15/2017	1.11	24.5
	Mann-Kendall	Stable	No-Trend

Contaminant concentrations have not significantly increased near Whitnall production well field in the southeast corner of the NHOU, and remain below their MCL of 5 µg/L. Mann-Kendall trend analysis of the data from NH-CO2, located east of the Whitnall Well Field in the southern portion of the NHOU, during the past five years indicates that contaminant concentrations are stable and below the MCL. The Erwin production well field has not been impacted.

Table 5. PCE and TCE Concentrations at NHOU near the Whitnall production well fields

Well ID	Date	PCE (µg/L)	TCE (µg/L)
NH-CO2	4/10/2012	2.5	3.1
	10/12/2012	2.9	2.5
	4/11/2014	0.5	0.089
	4/26/2017	0.39	1
	Mann-Kendall	Stable	Stable

Chromium, 1,4-dioxane, 1,2,3-trichloropropane, and nitrate concentrations above their respective MCL do not extend beyond the PCE and TCE plumes. Therefore, conclusions regarding hydraulic capture for PCE and TCE also apply to other contaminants of concern at the Site. Groundwater contamination continues to impact nearby production well fields and extend beyond the boundary of San Fernando Valley Area 1. Additional extraction wells and increased pumping required in the ESD will likely improve the hydraulic containment and prevent further degradation of the aquifer.

4.2.4. BOU

Concentrations of TCE and PCE are declining, hydraulic capture is minimizing groundwater contamination from migrating beyond the BOU, and contaminant mass is being removed. These conclusions were reached after a review of the 2015 capture zone study, an evaluation of groundwater contamination via Mann-Kendall analysis, and the estimation of VOC mass removal from groundwater. The data analysis focused on TCE and PCE, since they are the primary contaminants of concern.

A Mann-Kendall analysis was completed by Tetra Tech using groundwater data from 1996 to 2017, which led to the conclusion that PCE and TCE concentrations at the Site are declining, as presented in the 2017 Annual Groundwater Monitoring Report (Tetra Tech 2017).

USACE also completed Mann-Kendall analysis for select wells, which focused on data from the past five years. The Mann-Kendall analysis⁴ using groundwater data from 1996 to 2017 indicates PCE concentrations are declining at all 20 wells within the Water Table Aquifer, and at 7 of the 10 wells within the B-zone aquifer. Wells with increasing PCE concentrations were located between an extraction well and higher contaminant concentration areas, indicating that the extraction wells are pulling contaminant mass towards the extraction wells. It is expected that monitoring wells close to the extraction wells may show a temporary increase in concentration. A similar pattern was observed when analyzing the TCE concentrations from the 39 wells in Water Table aquifer and B-zone aquifer. Of these 39 wells, only two had increasing trends.

Only contaminant trends for PCE and TCE were analyzed for this FYR, because they are the primary contaminants of concern for the current remedy and have the highest concentrations at the Site. The declining trends for PCE and TCE indicate that water quality is improving and the remedy is moving towards meeting state and federal drinking water standards.

4.2.5. BOU Capture Zone

Hydraulic capture is occurring at the Site based on multiple evaluations presented in a 2015 technical memorandum (Tetra Tech 2015), which used numerical modelling to assess the groundwater capture zones of extraction wells within the BOU. The model indicated the highest concentrations of TCE (above 500 µg/L) are within the BOU capture zone. The memo also included a triangular irregular network analysis to estimate groundwater gradients, which indicated that groundwater down-gradient from the

⁴ Mann-Kendall analysis was completed using contaminant concentrations from wells with at least four values above the detection limit.

extraction wells primarily flows towards the extraction wells. Groundwater plume maps generated using 2014 data and 2017 groundwater data indicate the PCE and TCE plumes are not expanding between 2014 and 2017. Figures 11 and 12 are the PCE plumes from 2014 and 2017, and Figures 13 and 14 are the TCE plumes from 2014 and 2017.

After reviewing the 2015 technical memorandum (Tetra Tech 2015), EPA concluded that a “A sustained long-term flow rate of 9,000 gpm would provide increased capture of the southernmost plume, where PCE and TCE concentrations are well above the 100 ppb and 5 ppb concentration thresholds, respectively. The increased capture would better achieve the ROD’s remedial action objective to “partially control the movement and spread of ground water contaminants in the Burbank OU area, while contributing to aquifer restoration at the SFV Area 1 Site. It would provide for correspondingly higher mass removal, decreased overall cleanup time, and reduced potential for further downgradient migration which may threaten water supply wells.” (EPA, 2016). EPA recommended to increase the average, sustained extraction rate to 9,000 gpm providing increased capture until a second interim remedy is in place. An interconnect with LADWP is under construction, which will provide enough capacity to discharge up to 9,000 gallons per minute, the current capacity of the treatment system. A Focused Feasibility Study is also currently underway, which will result in a second interim remedy.

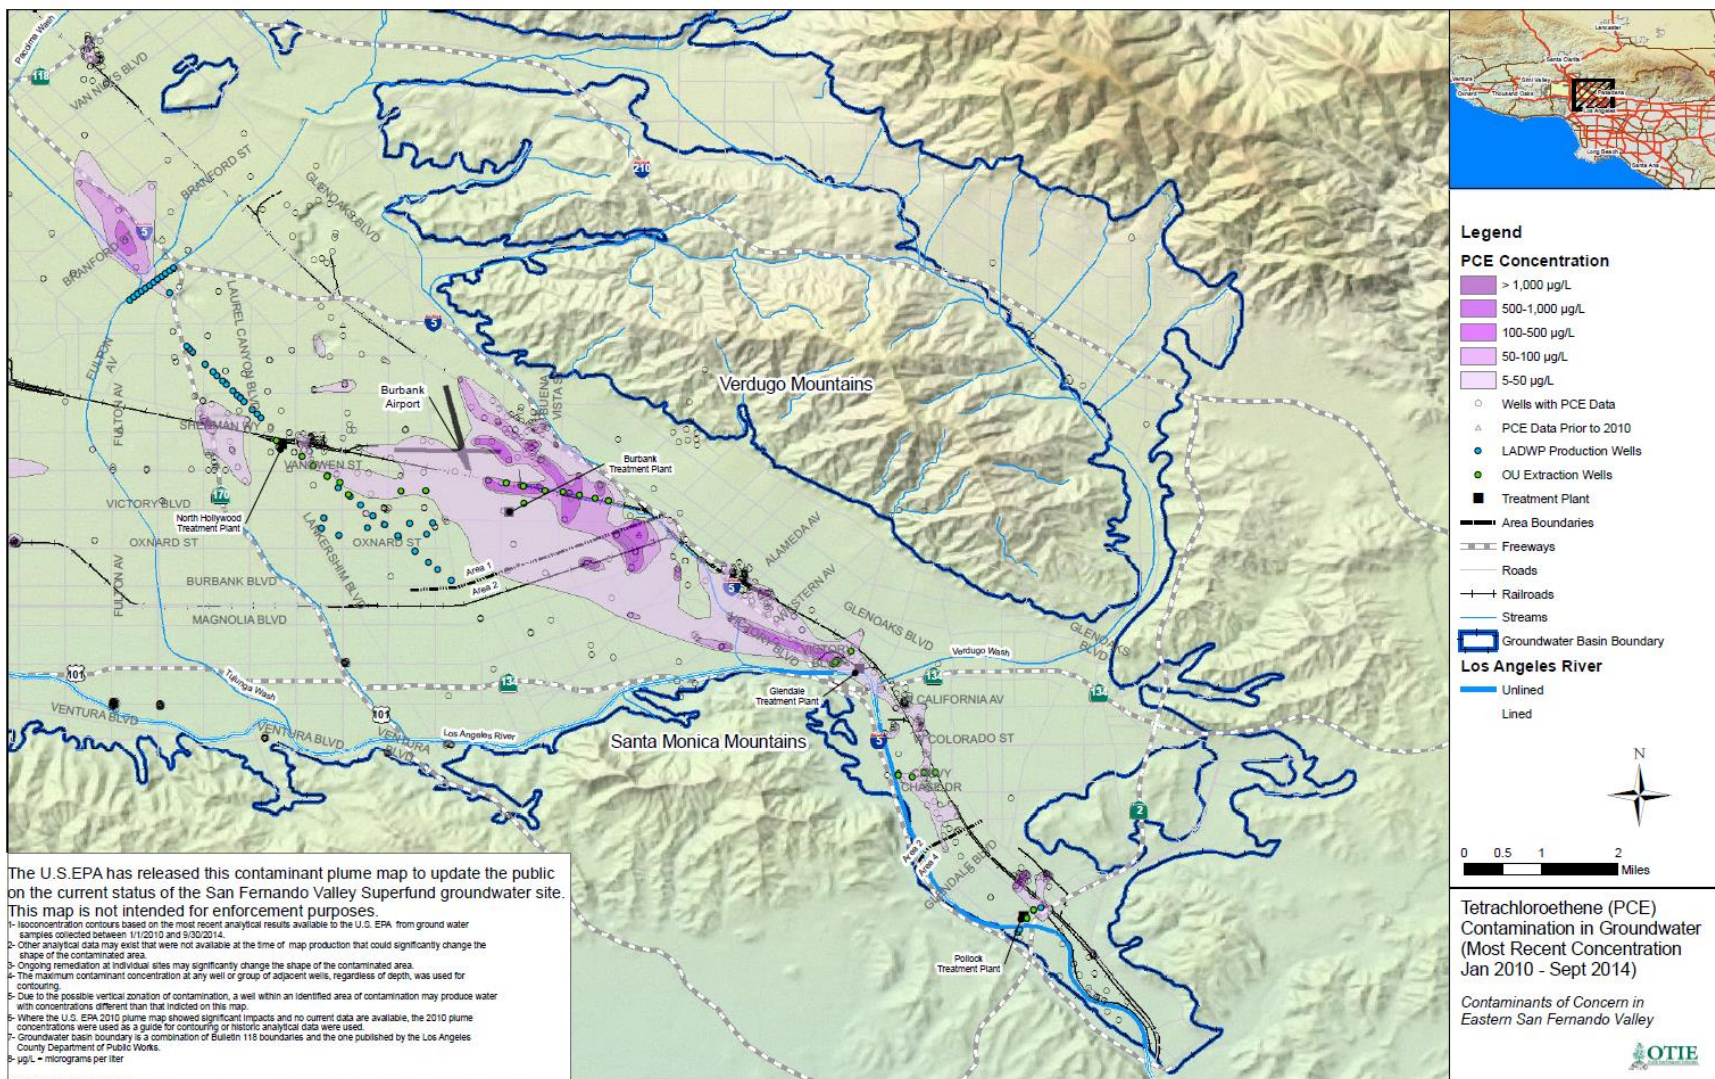

Figure 11. 2014 PCE Concentrations

Figure 12. 2017 PCE Concentrations

Figure 13. 2014 TCE Concentrations

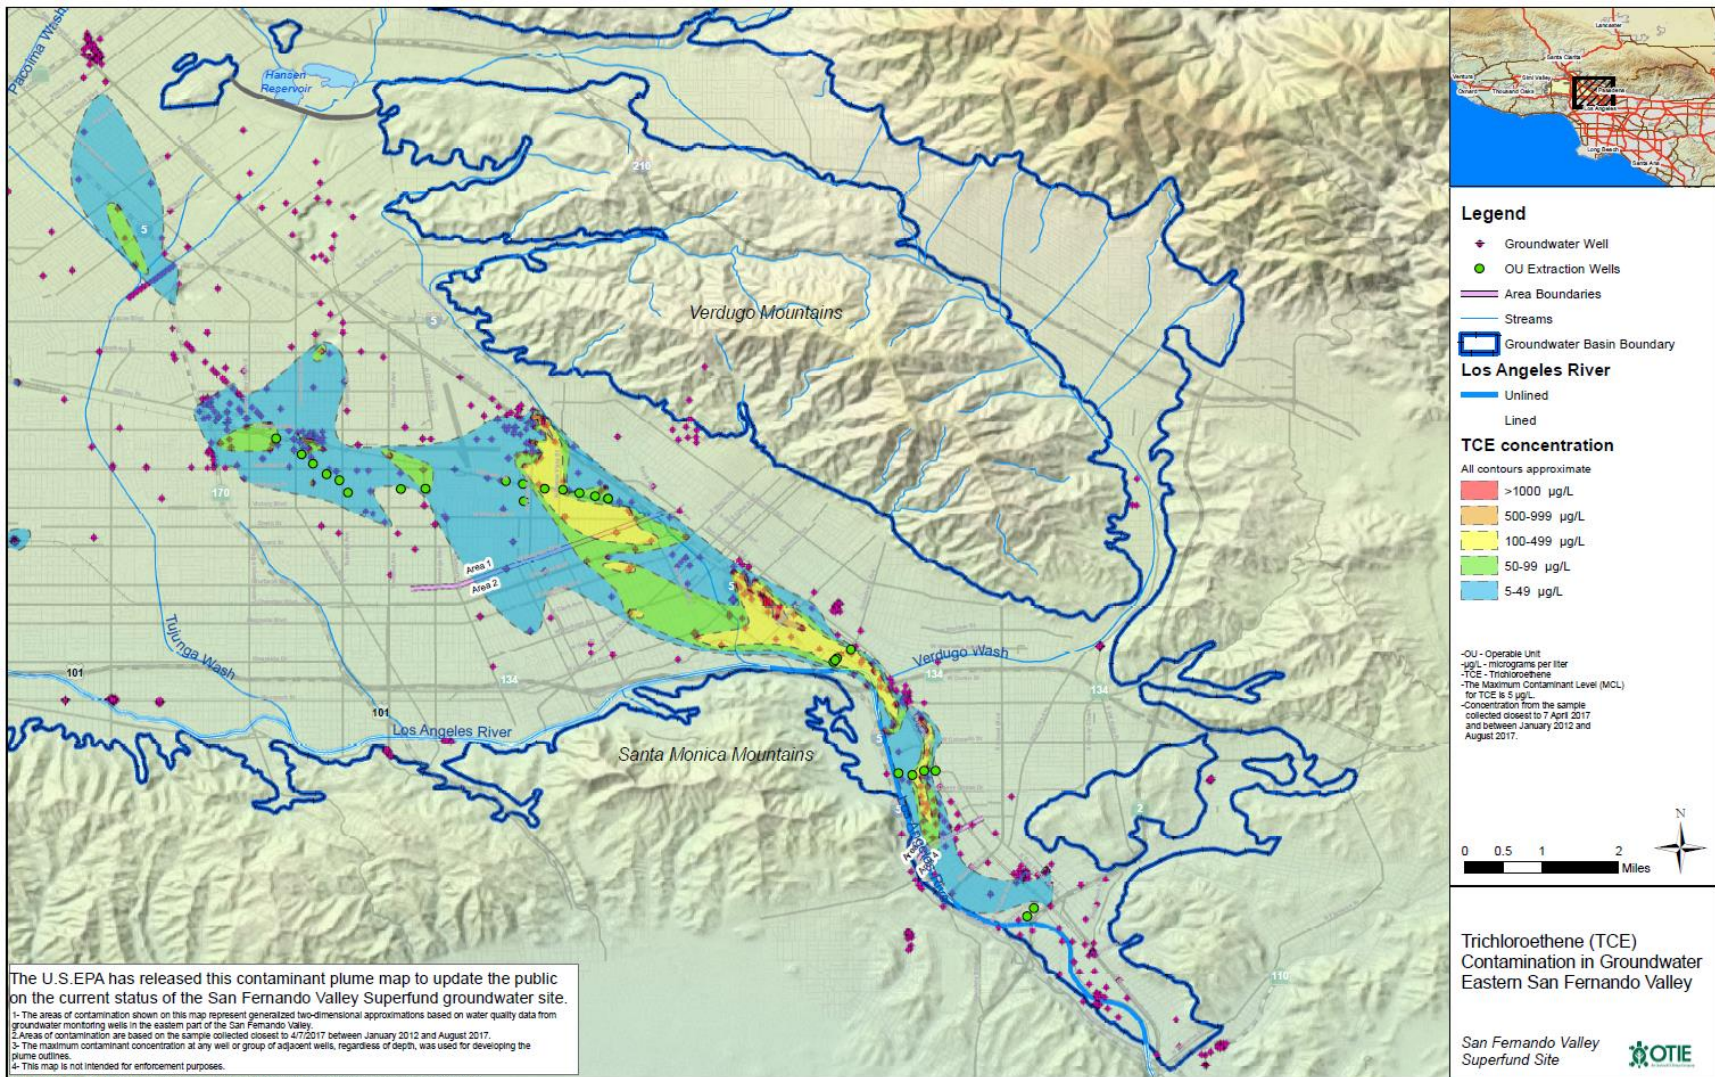

Figure 14. 2017 TCE Concentrations

4.2.6. BOU Contaminant Mass Removal

The remedy continues to contribute to aquifer restoration, a key RAO for the remedy, by removing mass from the aquifer. The Burbank Treatment Plant has removed 17,901 pounds of VOCs from January 2013 to April 2017, which demonstrates that contaminant mass is continuing to be removed from groundwater. Table 5 presents the contaminant mass removed and volume of water treated for each of the past five years. The rate of contaminant mass removal has declined over the past five years, which is typical of an aging groundwater extraction system.

Table 6. Burbank Treatment Plant Contaminant Mass Removal

Year	Total Flow Treated (gallons)	Cumulative Flow Treated (gallons)	Total VOC Mass Removed (pounds)	Cumulative VOC Mass Removed (pounds)
2013	3,637,576,057	54,002,901,370	5,164	246,686
2014	3,114,113,237	57,117,014,607	3,707	250,393
2015	3,365,140,780	60,482,155,387	4,368	254,761
2016	3,133,756,552	63,615,911,939	3,789	285,550
2017 (Jan-April)	771,530,941	64,387,442,880	873	255,634

4.3. Site Inspection for Both OUs

Site inspections of the North Hollywood treatment plant and the Burbank treatment plant were completed on January 24, 2018. The purpose of the inspections was to assess the protectiveness of the remedy. Kelly Manheimer, Gary Riley and Rusty Harris-Bishop from EPA, and Jeffrey Weiss from USACE attended the site inspections. Hector Santiago, Matt Qassis, Mark Hazschuh, Gonzolo Reyes, and Vahe Dabbaghian of LADWP were at the North Hollywood treatment plant inspection. Charles Grace, Richard Salazar, and Jennifer Wehner of Terranear PMC were at the Burbank treatment plant. The interviews were completed as a group at the site visit, and pertinent information from the interviews is included in the site inspection and trip report.

The North Hollywood treatment plant was not operating. The Burbank treatment plant was operating as intended.

5. Technical Assessment

5.1. Question A: Is the remedy functioning as intended by the decision documents?

For NHOU, the remedy was not functioning as intended when it was in operation before the fall of 2017, and did not contain the plume, prevent further degradation of water quality at the Rinaldi-Toluca and North Hollywood West production wells, nor inhibit migration in groundwater to the vicinity of the Erwin and Whitnall production well fields. EPA has updated the remedy to address shortcomings, and the responsible parties are in the process of designing and implementing the updated remedy.

For BOU, the treatment system continued to operate below the interim ROD specified extraction rate of 9,000 gpm. However, the results of the data review and the 2015 capture analysis indicate the remedy is achieving its objectives of partially controlling the movement and spread of groundwater contaminants in the Burbank OU area, and removing mass, even at the reduced flowrate. An interconnect with LADWP is under construction, which will provide enough capacity to discharge up to 9,000 gpm, the current capacity of the treatment system. A Focused Feasibility Study is currently underway to address emerging contaminants and to optimize the remedy.

For both OUs, the governmental controls in place at the site are effective in preventing exposure to contaminated groundwater.

5.2. Question B: Are the exposure assumptions, toxicity data, cleanup levels, and Remedial Action Objectives (RAOs) used at the time of remedy selection still valid?

Yes, exposure assumptions, toxicity data, and RAOs used at the time of remedy selection are still valid. Applicable or relevant and appropriate requirements (ARARs) identified in the RODs, as amended, have not changed since the last FYR. Although the toxicity data for some VOCs have changed, the remedy remains protective because VOC levels in treated water are non-detect. Cleanup levels for groundwater were not established at the time of remedy selection.

Vapor intrusion is not a significant pathway because the depth to groundwater exceeds 120 feet. There are no changes in exposure pathways. The combined RAOs are still valid.

5.3. Question C: Has any other information come to light that could call into question the protectiveness of the remedy?

No other information has come to light that calls into question the protectiveness of the remedy.

6. Issues/Recommendation

There are no issues that affect protectiveness at the North Hollywood or the Burbank Operable Units. The remedy for North Hollywood OU has recently been modified to increase pumping rates and add new wells. The North Hollywood remedy is not operating at this time while the upgrades are constructed.

7. Protectiveness Statement

Table 7. Protectiveness Statement NHOU

Protectiveness Statement(s)	
<i>Operable Unit: NHOU</i>	<i>Protectiveness Determination:</i> Protective
<i>Protectiveness Statement:</i> The remedy at the North Hollywood Operable Unit is currently protective of human health and the environment because there is no exposure to untreated groundwater. Despite the fact that the extraction and treatment system is not currently operating, the public is not exposed to untreated groundwater because LADWP is not currently extracting groundwater from the areas of high contaminant concentrations and governmental controls prevent other extraction of the groundwater. The remedy for North Hollywood OU has recently been modified to increase pumping rates and add new wells. Once these improvements have been implemented, EPA expects that all Remedial Action Objectives will be achieved.	

Table 8. Protectiveness Statement BOU

Protectiveness Statement(s)	
<i>Operable Unit: BOU</i>	<i>Protectiveness Determination:</i> Protective
<i>Protectiveness Statement:</i> The remedy at the Burbank Operable Unit is currently protective of human health and the environment. The treatment system effluent contaminant concentrations are less than their regulatory cleanup goals and there are governmental controls in place that prevent exposure to untreated groundwater.	

8. Next Review

The next FYR report for the Site is required five years from the completion date of this review.

Appendix B: Data Review

Appendix B includes figures used for the data review. The results from the data review are in section 4.2.

Figures B-1 through B-4 are Mann-Kendall results for PCE and TCE in the BOU monitoring wells. The Mann-Kendall results indicate contaminant concentrations are generally decreasing or stable in the BOU. Figures B-5 and B-6 are results from Triangular Irregular Network analysis used to calculate the groundwater gradients within the BOU. The gradients indicate groundwater is primarily flowing towards the extraction wells. Figures B-7 and B-8 are results of a numeric model used to calculate the radial influence of the extraction wells. The results of the model indicate extraction wells are preventing migration of contaminants beyond the BOU.

Figure B-2. Mann-Kendall Results for PCE in Water Table aquifer for BOU

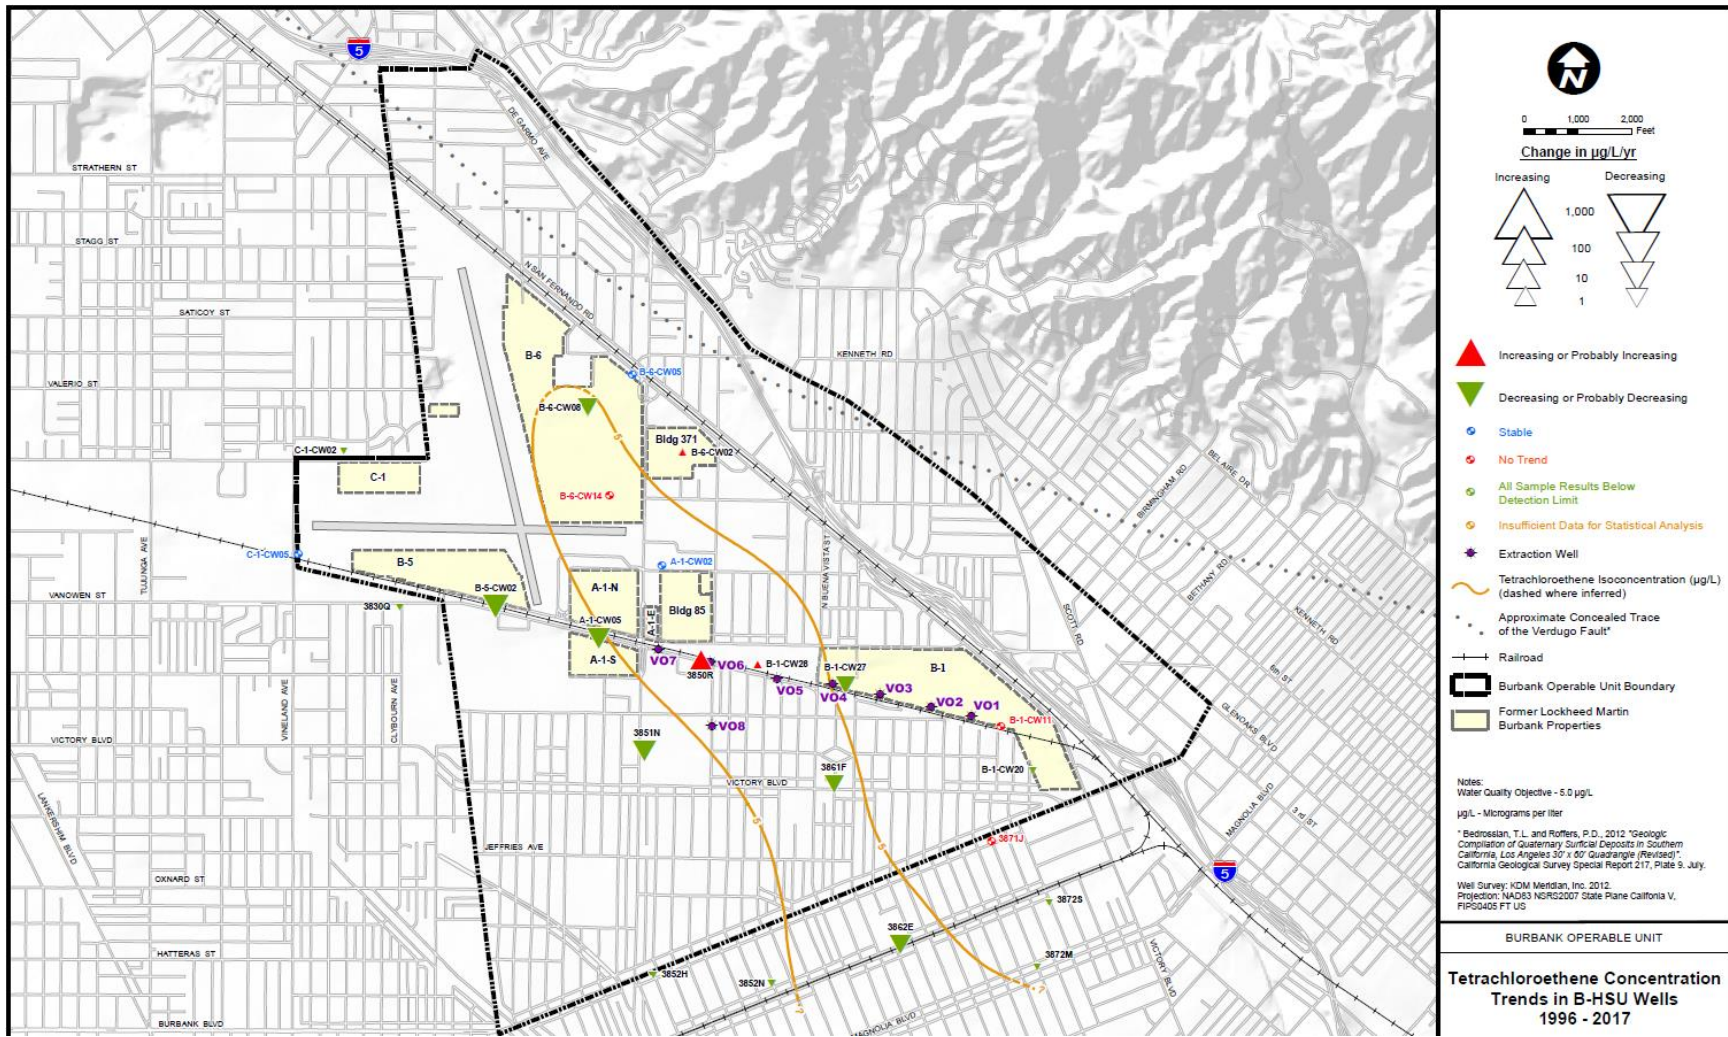

Figure B-3. Mann-Kendall Results for PCE in B-zone aquifer for BOU

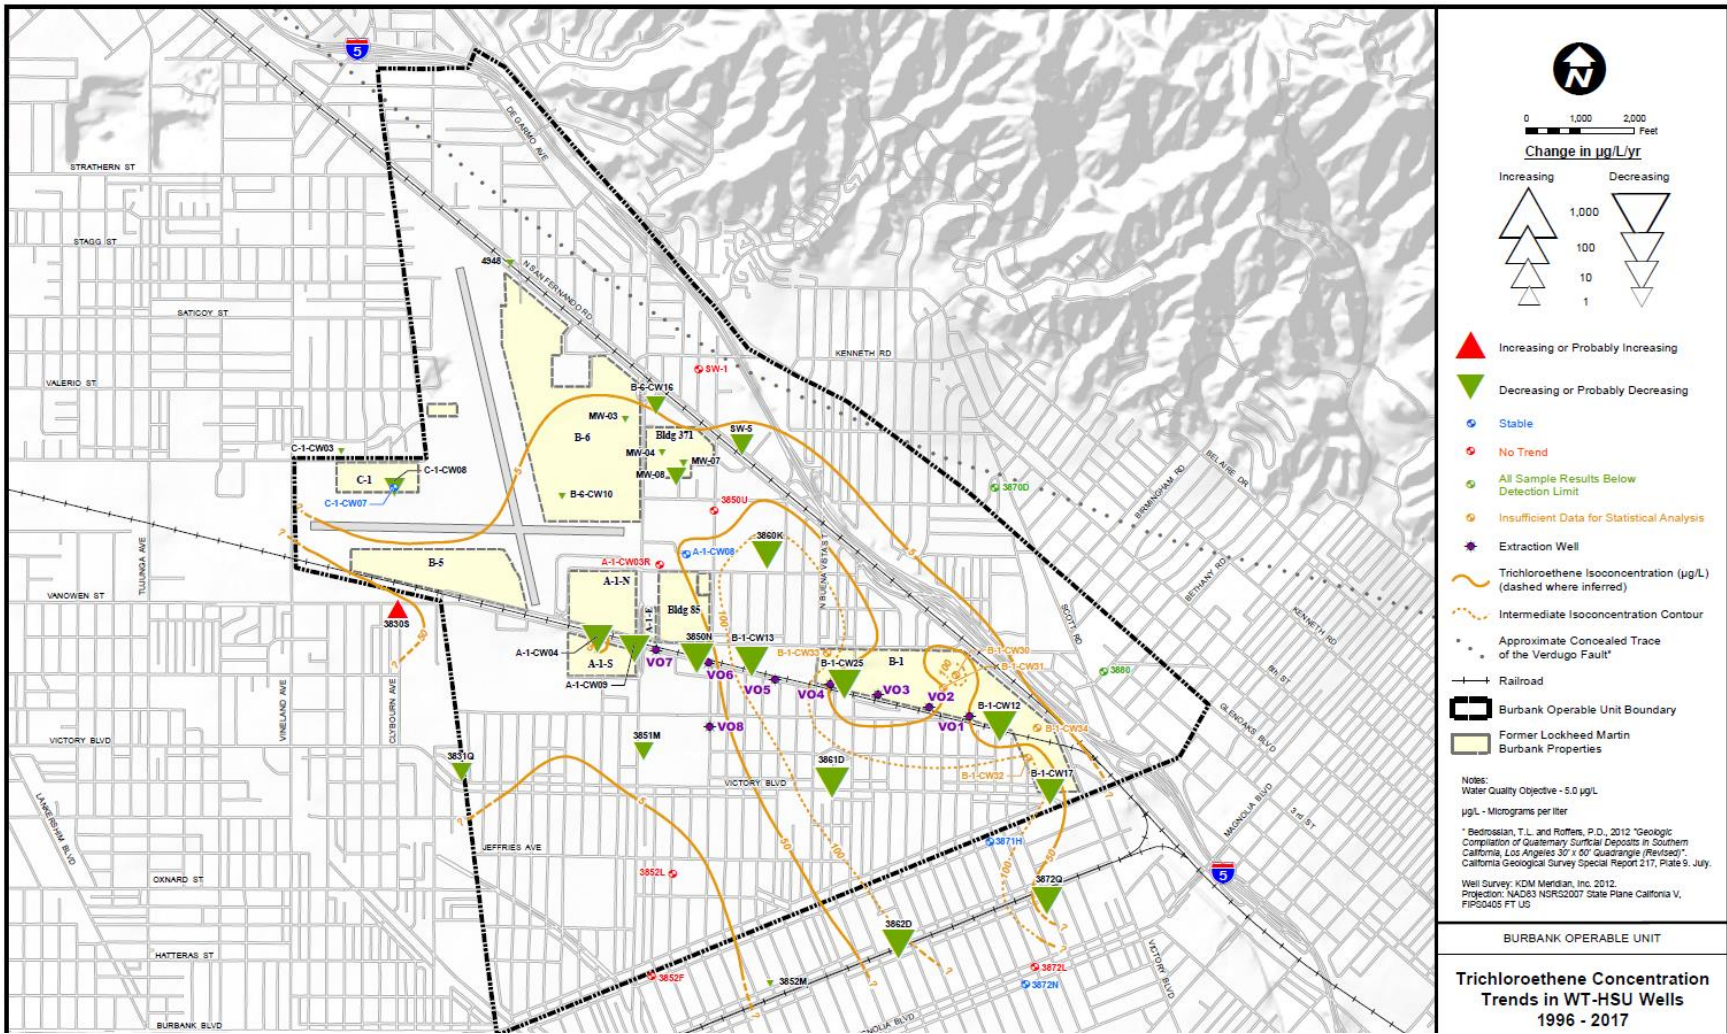

Figure B-4. Mann-Kendall Results for TCE in Water Table aquifer for BOU

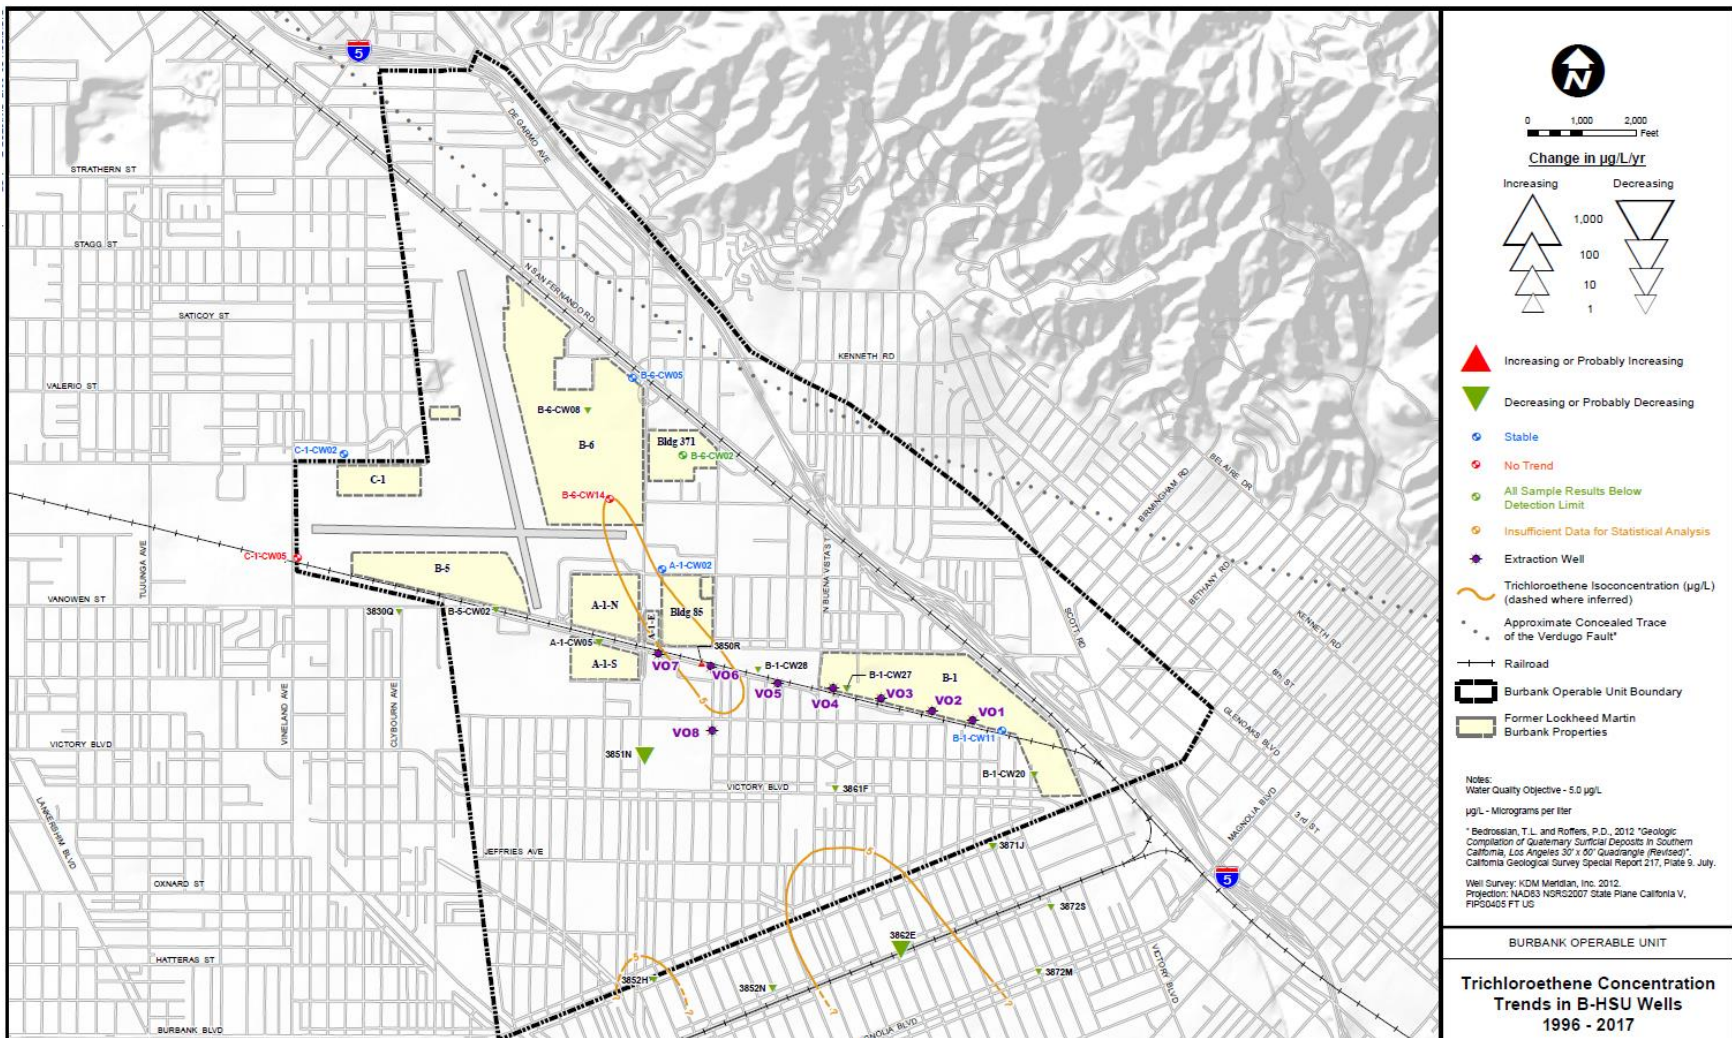

Figure B-5. Mann-Kendall Results for TCE in B-zone aquifer for BOU

Figure B-6. Triangular Irregular Network Analysis of Hydraulic Gradient in Water Table aquifer for BOU

Figure B-7. Triangular Irregular Network Analysis of Hydraulic Gradient in B-zone aquifer for BOU

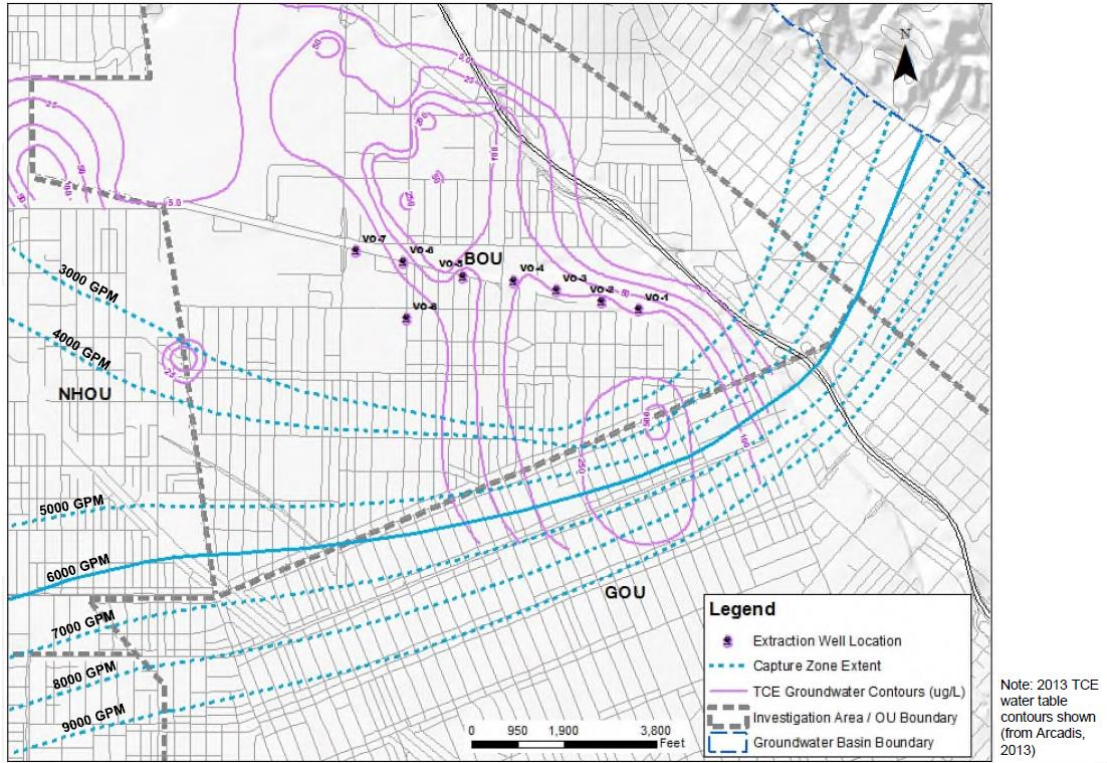

Figure B-8. Model-Simulated Capture Zone Extent under Average Water Level Conditions for BOU

Figure B-9. Model-Simulated Capture Zone Extent under Elevated Water Level Condition for BOU

Appendix C: ARAR Assessment

ARAR Analysis Appendix

The Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA) Section 121(d)(1)(A) requires that remedial actions at CERCLA sites attain (or justify the waiver of) any federal or state environmental standards, requirements, criteria, or limitations that are determined to be legally applicable or relevant and appropriate requirements (ARARs). federal ARARs may include requirements promulgated under any federal environmental laws. State ARARs may only include promulgated, enforceable environmental or facility-siting laws of general application that are more stringent or broader in scope than federal requirements and that are identified by the state in a timely manner. ARARs are identified on a Site-specific basis from information about the chemicals at the Site, the remedial actions contemplated, the physical characteristics of the Site, and other appropriate factors. ARARs include only substantive, not administrative, requirements and pertain only to onsite activities. There are three general categories of ARARs: chemical-specific, location-specific, and action-specific.

Because these were interim actions for containment of groundwater contamination, EPA has not established chemical-specific ARARs for restoration of groundwater remaining onsite. EPA is waiving this ARAR pursuant to CERCLA Section 121(d) (4) (A), 42 U.S.C. § 9621(d) (4) (A), and 40 CFR § 300.430(f) (1) (ii) (C), which allows EPA to select a remedy that does not achieve an ARAR when the remedial alternative selected is an interim measure that will become part of a final remedial action that will attain ARARs. EPA's waiver of the aquifer cleanup standard does not apply to water extracted from the aquifer and delivered to municipalities for use as drinking water. All extracted and treated water complies with maximum contaminant level (MCL) ARARs.

The current regulatory standards for trichloroethene (TCE), tetrachloroethene (PCE), and the other volatile organic compound (VOC) contaminants of concern are the state and federal MCLs. No revisions to these MCLs occurred during the five-year review period.

Hexavalent chromium is not regulated, but currently addressed by both federal and state MCLs for total chromium. In October 2014, the California Office of Administrative Law approved a regulation enacting an MCL for hexavalent chromium. However, due to a judgment issued by the California State Superior Court, the CA MCL for hexavalent chromium is no longer in effect.

federal and state laws and regulations, other than the chemical-specific ARARs that have been promulgated or changed over the past five years, are described in Table C-1. The table does not include those ARARs identified that are no longer pertinent. For example, ARARs related to remedial design and construction are not included in the table if they do not continue into long-term O&M. There have been no revisions to laws or regulations that affect the protectiveness of the remedy.

The following ARARs have not changed since the last Five-Year Review; and therefore, do not affect protectiveness:

- Clean Air Act SCAQMD, Rule 1401
- California Water Code and State Water Resources Control Board Model Well Standards Ordinance (1989), Division 7, Chapter 10, Section 13700 et seq.
- California Hazardous Waste Regulations, Generator Requirements, 22 CCR 66262.10, 22 CCR 66262.11, 22 CCR 66262.34(a)(1)(A), 22 CCR 66265.170 et seq. (Article 9), 22 CCR 66265.190 et seq. (Article 10)
- California Land Disposal Restrictions, Requirements for Generators, 22 CCR 66268.3, 22 CCR 66268.7, 22 CCR 66268.9, 22 CCR 66268.50
- California Land Disposal Restrictions, Requirements for Generators, 22 CCR 66268.1 et seq. (Article 1)
- Spent Carbon Disposal, 40 CFR 268.40
- Groundwater ReInjection, State Water Resources Control Board Resolution 68-16
- Groundwater ReInjection, RCRA Section 3020

Table C-1. Applicable or Relevant and Appropriate Requirements Evaluation

Original ARAR	Document	Original ARAR requirement	Revised requirement	Revision Date (between Sept. 2013-present)	Effect on Protectiveness
Clean Air Act SCAQMD, Regulation XIII		Regulation XIII requires that stationary sources of air emissions meet best available technology standards.	Rule 1309 Rule 1325	February 5, 2013 November 4, 2016	Rules 1309 (Emission Reduction Credits and Short-Term Credits), 1315 (federal New Source Tracking System), and 1325 (federal PM2.5 New Source Review Program) of Regulation XIII have been amended or adopted since the previous FYR, but none of the changes affect protectiveness.

CALIFORNIA

High court rules against crisis pregnancy center law

By Maria Sherman and Jessica Gordon
 The Associated Press

WASHINGTON — The Supreme Court on Tuesday effectively put an end to a California law that forces anti-abortion crisis pregnancy centers to provide information about abortion.

The 5-4 ruling was similar to one on a similar law in Illinois and Texas.

The California law took effect in 2010. It requires centers that are licensed by the state to provide information about the availability of abortion, abortion counseling, and other services, at little or no cost. Centers that do not provide the information are prohibited from accepting state funds to pay for a sign that said so. The court struck down that portion of the law.

The justices said they were skeptical of and forced to deliver a message with which they disagreed. California said the law was needed to let poor women know all their options.

Justice Clarence Thomas, in his majority opinion, said the center "is unlikely to succeed" in their constitutional challenge to the portion of the law involving licensed centers. That means that while the law is currently on the books, its challengers can go back to court to get an order halting its enforcement. An attorney for the challenger said Tuesday that they expect to be able to do that quickly. California had not been enforcing the law, however.

"California cannot require the licensed facilities to deliver its message for it," Thomas wrote for himself, Chief Justice John Roberts and Justice Anthony Kennedy. Samuel Alito and Neil Gorsuch also joined the majority for an issue not before the court — whether the law could be applied to unlicensed centers. Justice Stephen Breyer said among the reasons the law could be applied to unlicensed centers is that the high court has previously upheld the law requiring doctors to tell women seeking abortions about abortion services. "If that's all, the law must be upheld," Breyer said in a dissenting opinion, joined by his liberal colleagues, Justice Sotomayor, Chief Justice John Roberts, and Justice Elena Kagan.

Visitors depart the Supreme Court on Monday in Washington, D.C. The Supreme Court on Tuesday effectively put an end to a California law that forces anti-abortion crisis pregnancy centers to provide information about abortion. Anti-abortion groups cheered the decision.

and anti-abortion groups were among those cheering the decision. The Trump administration had argued that California law violates their right of licensed centers but had no objection to the requirement for the unlicensed centers. "If people would not be forced by their government to promote a message with which they disagree, and provide pregnancy centers in California should not be forced to advertise about this and condemn the very reason they exist," Justice said in a dissent. "The day California Attorney General Xavier Becerra, a Democrat, called the decision "unfortunate" but said "our work is not over."

California's new law requires information about their health care options with a center. "The abortion rights group NARAL Pro-Choice California was a prime sponsor of the California law. NARAL can testify that the centers misled women about their options and try to persuade them to forgo abortion. Statistics of the number of crisis pregnancy centers in the U.S. run from 1,000 to over 2,000, compared with fewer than 1,000 abortion providers, a women's rights group said in a separate court filing.

NARAL president Ryan Sigurd said in a statement after Tuesday's decision that the Supreme Court had "turned its back on women and endorsed the deceptive tactics used by fake women's health centers."

California lawyers challenged by the National Institute of Family and Life Advocacy, an organization with ties to 1,000 pregnancy centers nationwide, said the court's decision "is a landmark" and said it was a "great day for pro-life pregnancy centers" and for free speech. Other state and federal laws related to crisis pregnancy centers. In 2016, a federal appeals court in New York ruled down parts of a New York City ordinance, though it upheld the requirement for unlicensed centers to say that they lack a license. Other states have laws that regulate doctors' speech in the abortion context. In Louisiana, Texas and Wisconsin, doctors must display a sonogram and describe the fetus to a pregnant woman considering an abortion, according to the Guttmacher Institute, which supports abortion rights. Similar laws have been blocked in Kentucky, North Carolina and Oklahoma.

Public Notice

U.S. Environmental Protection Agency (EPA) Conducts Third Five-Year Review of Cleanup at the San Fernando Valley, Area 1, Superfund Site in Los Angeles, CA

The U.S. Environmental Protection Agency (EPA) is conducting the 2018 Five-Year Review of the cleanup at the San Fernando Valley (SFV) Area 1 Superfund site in Los Angeles and Burbank, CA. The Five-Year Review is being conducted to determine whether the groundwater pump and treat systems are adequately protecting human health and the environment. The systems are designed to capture and contain the contaminated groundwater and prevent it from moving into clean groundwater areas. The primary contaminants of concern in the groundwater are volatile organic compounds (VOCs), including trichloroethylene (TCE) and perchloroethylene (PCE).

SFV area 1 also includes approximately 20 active sites, some of which are not yet fully remediated. EPA will be reviewing the status of these sites and the effectiveness of the cleanup. EPA will be reviewing the status of these sites and the effectiveness of the cleanup. EPA will be reviewing the status of these sites and the effectiveness of the cleanup.

The 2018 Five-Year Review report will be completed by September 30, 2018 and available shortly after this date at the following locations and website. The next review will be in 2023.

III. ON-SITE DOCUMENTS & RECORDS VERIFIED (Check all that apply)	
1.	O&M Documents <input checked="" type="checkbox"/> O&M manual <input checked="" type="checkbox"/> Readily available <input checked="" type="checkbox"/> Up to date <input type="checkbox"/> N/A <input type="checkbox"/> As-built drawings <input type="checkbox"/> Readily available <input type="checkbox"/> Up to date <input type="checkbox"/> N/A <input checked="" type="checkbox"/> Maintenance logs <input checked="" type="checkbox"/> Readily available <input checked="" type="checkbox"/> Up to date <input type="checkbox"/> N/A Remarks <u>As-built drawings not maintained on site, but rather at LADWP filter building.</u>
2.	Site-Specific Health and Safety Plan <input checked="" type="checkbox"/> Readily available <input checked="" type="checkbox"/> Up to date <input type="checkbox"/> N/A Contingency plan/emergency response plan <input checked="" type="checkbox"/> Readily available <input checked="" type="checkbox"/> Up to date <input type="checkbox"/> N/A Remarks <u>SSHSP is located at Sylmar office.</u>
3.	O&M and OSHA Training Records <input checked="" type="checkbox"/> Readily available <input checked="" type="checkbox"/> Up to date <input type="checkbox"/> N/A Remarks <u>Training records not maintained on site, but rather at LADWP Sylmar facility.</u>
4.	Permits and Service Agreements <input checked="" type="checkbox"/> Air discharge permit <input type="checkbox"/> Readily available <input type="checkbox"/> Up to date <input type="checkbox"/> N/A <input checked="" type="checkbox"/> Effluent discharge <input type="checkbox"/> Readily available <input type="checkbox"/> Up to date <input type="checkbox"/> N/A <input type="checkbox"/> Waste disposal, POTW <input type="checkbox"/> Readily available <input type="checkbox"/> Up to date <input checked="" type="checkbox"/> N/A <input type="checkbox"/> Other permits _____ <input type="checkbox"/> Readily available <input type="checkbox"/> Up to date <input type="checkbox"/> N/A Remarks <u>Permits and Service Agreements not maintained on site, but rather at LADWP Sylmar facility.</u>
5.	Gas Generation Records <input type="checkbox"/> Readily available <input type="checkbox"/> Up to date <input checked="" type="checkbox"/> N/A Remarks <u>None</u>
6.	Settlement Monument Records <input type="checkbox"/> Readily available <input type="checkbox"/> Up to date <input checked="" type="checkbox"/> N/A Remarks <u>None</u>
7.	Groundwater Monitoring Records <input checked="" type="checkbox"/> Readily available <input type="checkbox"/> Up to date <input type="checkbox"/> N/A Remarks <u>LADWP provides monthly water quality reports for influent and effluent to the plant. Groundwater monitoring wells sampled by other entities.</u>
8.	Leachate Extraction Records <input type="checkbox"/> Readily available <input type="checkbox"/> Up to date <input checked="" type="checkbox"/> N/A Remarks <u>None</u>
9.	Discharge Compliance Records <input checked="" type="checkbox"/> Air <input type="checkbox"/> Readily available <input type="checkbox"/> Up to date <input type="checkbox"/> N/A <input checked="" type="checkbox"/> Water (effluent) <input type="checkbox"/> Readily available <input type="checkbox"/> Up to date <input type="checkbox"/> N/A Remarks <u>Discharge Compliance Monitoring Records provided with Quarterly Reports</u>
10.	Daily Access/Security Logs <input checked="" type="checkbox"/> Readily available <input checked="" type="checkbox"/> Up to date <input type="checkbox"/> N/A Remarks <u>Access and maintenance are recorded on paper and at LADWP Sylmar facility.</u>
IV. O&M COSTS	
1.	O&M Organization <input type="checkbox"/> State in-house <input type="checkbox"/> Contractor for State <input type="checkbox"/> PRP in-house <input type="checkbox"/> Contractor for PRP <input type="checkbox"/> federal Facility in-house <input type="checkbox"/> Contractor for federal Facility <input checked="" type="checkbox"/> Other <u>Los Angeles Department of Water and Power (LADWP)</u>
2.	Unanticipated or Unusually High O&M Costs During Review Period Describe costs and reasons: <u>Issues with the heater for the air stripper and power supply to the plant has been a big problem that has caused shut downs, LADWP looking at improving power supply when plant is upgraded.</u>

V. ACCESS AND INSTITUTIONAL CONTROLS <input checked="" type="checkbox"/> Applicable <input type="checkbox"/> N/A			
A. Fencing			
1.	Fencing damaged	<input type="checkbox"/> Location shown on site map	<input checked="" type="checkbox"/> Gates secured <input type="checkbox"/> N/A
Remarks: <u>No Fencing Damage; treatment system is double fenced and fairly isolated.</u>			
B. Other Access Restrictions			
1.	Signs and other security measures	<input type="checkbox"/> Location shown on site map	<input type="checkbox"/> N/A
Remarks: <u>Security cameras on both sides of air stripper, alarms on doors that notify LADWP when door is opened.</u>			
C. Institutional Controls (ICs)			
1.	Implementation and enforcement		
	Site conditions imply ICs not properly implemented	<input type="checkbox"/> Yes <input checked="" type="checkbox"/> No	<input type="checkbox"/> N/A
	Site conditions imply ICs not being fully enforced	<input type="checkbox"/> Yes <input checked="" type="checkbox"/> No	<input type="checkbox"/> N/A
	Type of monitoring (e.g., self-reporting, drive by)	<u>N/A</u>	
	Frequency	<u>N/A</u>	
	Responsible party/agency	<u>N/A</u>	
	Reporting is up-to-date	<input type="checkbox"/> Yes <input type="checkbox"/> No	<input checked="" type="checkbox"/> N/A
	Reports are verified by the lead agency	<input type="checkbox"/> Yes <input type="checkbox"/> No	<input checked="" type="checkbox"/> N/A
	Specific requirements in deed or decision documents have been met	<input type="checkbox"/> Yes <input type="checkbox"/> No	<input checked="" type="checkbox"/> N/A
	Violations have been reported	<input type="checkbox"/> Yes <input type="checkbox"/> No	<input checked="" type="checkbox"/> N/A
	Other problems or suggestions:	<input type="checkbox"/> Report attached	
<u>An IC is not necessary since the basin has a moratorium on installation of new wells.</u>			
2.	Adequacy	<input checked="" type="checkbox"/> ICs are adequate	<input type="checkbox"/> ICs are inadequate <input type="checkbox"/> N/A
Remarks: <u>None</u>			
D. General			
1.	Vandalism/trespassing	<input type="checkbox"/> Location shown on site map	<input checked="" type="checkbox"/> No vandalism evident
Remarks:			
2.	Land use changes on site	<input checked="" type="checkbox"/> N/A	
Remarks: <u>None</u>			
3.	Land use changes off site	<input checked="" type="checkbox"/> N/A	
Remarks: <u>None</u>			
VI. GENERAL SITE CONDITIONS			
A. Roads <input checked="" type="checkbox"/> Applicable <input type="checkbox"/> N/A			
1.	Roads damaged	<input type="checkbox"/> Location shown on site map	<input checked="" type="checkbox"/> Roads adequate <input type="checkbox"/> N/A
Remarks: <u>None</u>			
B. Other Site Conditions			
Remarks: <u>None</u>			
VII. LANDFILL COVERS <input type="checkbox"/> Applicable <input checked="" type="checkbox"/> N/A			
VIII. VERTICAL BARRIER WALLS <input type="checkbox"/> Applicable <input checked="" type="checkbox"/> N/A			

IX. GROUNDWATER/SURFACE WATER REMEDIES <input checked="" type="checkbox"/> Applicable <input type="checkbox"/> N/A	
A. Groundwater Extraction Wells, Pumps, and Pipelines <input checked="" type="checkbox"/> Applicable <input type="checkbox"/> N/A	
1.	Pumps, Wellhead Plumbing, and Electrical <input checked="" type="checkbox"/> Good condition <input type="checkbox"/> All required wells properly operating <input type="checkbox"/> Needs Maintenance <input type="checkbox"/> N/A Remarks <u>Only visited one extraction well that was not operating due to plant shut down.</u>
2.	Extraction System Pipelines, Valves, Valve Boxes, and Other Appurtenances <input checked="" type="checkbox"/> Good condition <input type="checkbox"/> Needs Maintenance Remarks <u>None</u>
3.	Spare Parts and Equipment <input checked="" type="checkbox"/> Readily available <input type="checkbox"/> Good condition <input type="checkbox"/> Requires upgrade <input type="checkbox"/> Needs to be provided Remarks <u>Parts are stored offsite in a nearby warehouse, which was not visited during the site inspection.</u>
B. Surface Water Collection Structures, Pumps, and Pipelines <input type="checkbox"/> Applicable <input checked="" type="checkbox"/> N/A	
C. Treatment System <input checked="" type="checkbox"/> Applicable <input type="checkbox"/> N/A	
1.	Treatment Train (Check components that apply) <input type="checkbox"/> Metals removal <input type="checkbox"/> Oil/water separation <input type="checkbox"/> Bioremediation <input checked="" type="checkbox"/> Air stripping <input checked="" type="checkbox"/> Carbon adsorbers <input type="checkbox"/> Filters _____ <input checked="" type="checkbox"/> Additive (e.g., chelation agent, flocculent) <u>Hexametaphosphate descalant</u> <input type="checkbox"/> Others _____ <input checked="" type="checkbox"/> Good condition <input type="checkbox"/> Needs Maintenance <input checked="" type="checkbox"/> Sampling ports properly marked and functional <input checked="" type="checkbox"/> Sampling/maintenance log displayed and up to date <input checked="" type="checkbox"/> Equipment properly identified <input type="checkbox"/> Quantity of groundwater treated annually _____ <input type="checkbox"/> Quantity of surface water treated annually <u>None</u> Remarks <u>None</u>
2.	Electrical Enclosures and Panels (properly rated and functional) <input type="checkbox"/> N/A <input checked="" type="checkbox"/> Good condition <input type="checkbox"/> Needs Maintenance Remarks <u>The electrical system is antiquated and often requires the attention of technicians.</u>
3.	Tanks, Vaults, Storage Vessels <input type="checkbox"/> N/A <input checked="" type="checkbox"/> Good condition <input type="checkbox"/> Proper secondary containment <input type="checkbox"/> Needs Maintenance Remarks <u>None</u>
4.	Discharge Structure and Appurtenances <input type="checkbox"/> N/A <input checked="" type="checkbox"/> Good condition <input type="checkbox"/> Needs Maintenance Remarks _____
5.	Treatment Building(s) <input type="checkbox"/> N/A <input checked="" type="checkbox"/> Good condition (esp. roof and doorways) <input type="checkbox"/> Needs repair <input type="checkbox"/> Chemicals and equipment properly stored Remarks _____
6.	Monitoring Wells (pump and treatment remedy) <input type="checkbox"/> Properly secured/locked <input type="checkbox"/> Functioning <input checked="" type="checkbox"/> Routinely sampled <input type="checkbox"/> Good condition <input type="checkbox"/> All required wells located <input type="checkbox"/> Needs Maintenance <input type="checkbox"/> N/A Remarks <u>Monitoring Wells were not visited on the site inspection.</u>

D. Monitoring Data	
1.	Monitoring Data <input checked="" type="checkbox"/> Is routinely submitted on time <input checked="" type="checkbox"/> Is of acceptable quality
2.	Monitoring data suggests: <input type="checkbox"/> Groundwater plume is effectively contained <input type="checkbox"/> Contaminant concentrations are declining
E. Monitored Natural Attenuation	
1.	Monitoring Wells (natural attenuation remedy) <input type="checkbox"/> Properly secured/locked <input type="checkbox"/> Functioning <input type="checkbox"/> Routinely sampled <input type="checkbox"/> Good condition <input type="checkbox"/> All required wells located <input type="checkbox"/> Needs Maintenance <input type="checkbox"/> N/A Remarks <u>This is not an MNA remedy, it is a containment remedy.</u>
3.X. OTHER REMEDIES	
N/A	
XI. OVERALL OBSERVATIONS	
A.	Implementation of the Remedy
Describe issues and observations relating to whether the remedy is effective and functioning as designed. Begin with a brief statement of what the remedy is to accomplish (i.e., to contain contaminant plume, minimize infiltration and gas emission, etc.). <u>The extraction wells and treatment system need to be updated to prevent further migration of the contamination. The treatment system has not been operating since November 2017 due to issues with the wells. A new treatment system and new wells will be installed to improve the remedy. .</u>	
B.	Adequacy of O&M
Describe issues and observations related to the implementation and scope of O&M procedures. In particular, discuss their relationship to the current and long-term protectiveness of the remedy. <u>The treatment system is scheduled to be update.</u>	
C.	Early Indicators of Potential Remedy Problems
Describe issues and observations such as unexpected changes in the cost or scope of O&M or a high frequency of unscheduled repairs that suggest that the protectiveness of the remedy may be compromised in the future. .	
4.D.	Opportunities for Optimization
Describe possible opportunities for optimization in monitoring tasks or the operation of the remedy. <u>The new remedial design will optimize the system. The existing extraction wells could be deepened or new extraction wells could be drilled.</u>

1.	Treatment Train (Check components that apply) <input type="checkbox"/> Metals removal <input type="checkbox"/> Oil/water separation <input type="checkbox"/> Bioremediation <input checked="" type="checkbox"/> Air stripping <input checked="" type="checkbox"/> Carbon adsorbers <input type="checkbox"/> Filters _____ <input checked="" type="checkbox"/> Additive (e.g., chelation agent, flocculent) <u>C150 proprietary antiscalant (NALCO)</u> <input type="checkbox"/> Others _____ <input checked="" type="checkbox"/> Good condition <input type="checkbox"/> Needs Maintenance <input checked="" type="checkbox"/> Sampling ports properly marked and functional <input checked="" type="checkbox"/> Sampling/maintenance log displayed and up to date <input checked="" type="checkbox"/> Equipment properly identified <input type="checkbox"/> Quantity of groundwater treated annually _____ <input type="checkbox"/> Quantity of surface water treated annually <u>N/A</u> Remarks <u>Treatment system looks clean and well maintained</u>
2.	Electrical Enclosures and Panels (properly rated and functional) <input type="checkbox"/> N/A <input checked="" type="checkbox"/> Good condition <input type="checkbox"/> Needs Maintenance Remarks <u>None</u>
3.	Tanks, Vaults, Storage Vessels <input type="checkbox"/> N/A <input checked="" type="checkbox"/> Good condition <input type="checkbox"/> Proper secondary containment <input type="checkbox"/> Needs Maintenance Remarks: Consider lining pipes that transfer waste to prevent pin holes.
4.	Discharge Structure and Appurtenances <input type="checkbox"/> N/A <input checked="" type="checkbox"/> Good condition <input type="checkbox"/> Needs Maintenance Remarks <u>None</u>
5.	Treatment Building(s) <input type="checkbox"/> N/A <input checked="" type="checkbox"/> Good condition (esp. roof and doorways) <input type="checkbox"/> Needs repair <input checked="" type="checkbox"/> Chemicals and equipment properly stored Remarks <u>None</u>
6.	Monitoring Wells (pump and treatment remedy) <input type="checkbox"/> Properly secured/locked <input type="checkbox"/> Functioning <input checked="" type="checkbox"/> Routinely sampled <input type="checkbox"/> Good condition <input type="checkbox"/> All required wells located <input type="checkbox"/> Needs Maintenance <input type="checkbox"/> N/A Remarks <u>Monitoring Wells were not visited on the Site Inspection</u>

D. Monitoring Data	
5.	Monitoring Data <input type="checkbox"/> Is routinely submitted on time <input checked="" type="checkbox"/> Is of acceptable quality
6.	Monitoring data suggests: <input type="checkbox"/> Groundwater plume is effectively contained <input type="checkbox"/> Contaminant concentrations are declining
D. Monitored Natural Attenuation	
1.	Monitoring Wells (natural attenuation remedy) <input type="checkbox"/> Properly secured/locked <input type="checkbox"/> Functioning <input type="checkbox"/> Routinely sampled <input type="checkbox"/> Good condition <input type="checkbox"/> All required wells located <input type="checkbox"/> Needs Maintenance <input checked="" type="checkbox"/> N/A Remarks <u>This is a containment remedy, not an MNA remedy.</u>
7.X. OTHER REMEDIES	
N/A	
XI. OVERALL OBSERVATIONS	
A. Implementation of the Remedy	
Describe issues and observations relating to whether the remedy is effective and functioning as designed. Begin with a brief statement of what the remedy is to accomplish (i.e., to contain contaminant plume, minimize infiltration and gas emission, etc.). <u>The remedy functions very well. Contaminants are being removed from the aquifer, but levels appear to be consistent.</u>	
B. Adequacy of O&M	
Describe issues and observations related to the implementation and scope of O&M procedures. In particular, discuss their relationship to the current and long-term protectiveness of the remedy. <u>None</u>	
C. Early Indicators of Potential Remedy Problems	
Describe issues and observations such as unexpected changes in the cost or scope of O&M or a high frequency of unscheduled repairs, that suggest that the protectiveness of the remedy may be compromised in the future. <u>None</u>	
8.D. Opportunities for Optimization	
Describe possible opportunities for optimization in monitoring tasks or the operation of the remedy. 1) <u>A new interconnect will be built between LADWP to allow for more water to be blended and increase the efficiency of the plant. Currently the production wells that supply water to the plant have packers installed to reduce the production rate due to not having enough water to blend with.</u> 2) <u>Variable frequency drive pump may help increase energy efficiency.</u> 3) <u>Allow the use of recirculated water for the vapor phase carbon bed regeneration which would reduce the amount of water discharged to the sewer.</u>

Jeffrey Weiss		USACE

2. SUMMARY

Site visits were completed at the North Hollywood Treatment Plant (North Hollywood Treatment Plant – North Hollywood Operable Unit [NHOU]) and Burbank Treatment Plant (BTP – Burbank Operable Unit [BOU]) on January 24, 2018 as part of the San Fernando Valley Area 1 Superfund Site (Site) Five-Year Review. The participants listed attended the Site listed next to their name. EPA and USACE personnel attended both site visits. The weather was sunny and in the 60s. The site visit at North Hollywood Treatment Plant lasted from approximately 8:00 to 9:30 a.m., and the BTP from

approximately 10:00 to 11:30 a.m. That afternoon, EPA and USACE also visited three of the extraction well locations to observe the condition of the well heads. The sections below describe the conditions at each Site and Appendix F of the Five-Year Review includes a Site Inspection Checklist completed by Jeffrey Weiss for each of the Sites.

3. DISCUSSION

North Hollywood Treatment Plant/North Hollywood Operable Unit

The North Hollywood Treatment Plant is not currently operating and has been shut down since November 13, 2107, due to declining water levels and maintenance issues. When the extraction wells and treatment system were operating, the treatment system had maintenance issues primarily related to an inadequate power supply to the Site, as well as inadequate spare parts supply. The treatment plant was in good condition with no obvious signs of damage or issues. The operator of the Site noted they have had problems with the inlet valve to the system not closing all the way when the system shuts down, causing a pressure buildup in the treatment system. Overall, the treatment system and extraction wells need to be updated to meet the requirements of the remedy.

Burbank Treatment Plant/Burbank Operable Unit

The BTP is operating as intended by the current remedy. The conference building and storage buildings have been updated in the last 5 years, and the method for storing contaminants removed from the treatment system has changed. They are still configuring the final method for storing the contaminants until they are picked up. The site currently blends the water from the treatment plant to meet the requirements for 1,4 dioxane and hexavalent chromium. The distribution system does not have enough capacity to accept all the water from the plant, so they are limited to 6,000 gallons per minute discharge rate. However, an interconnect with LADWP is under construction, which will provide enough capacity to discharge up to 9,000 gallons per minute, the current capacity of the treatment system. There were no signs of damage or issues with the treatment plant.

Well Heads

EPA and USACE visited three extraction wells locations within the SFV Area 1; one of the Sites was for the BTP, and the other two were for the North Hollywood Treatment Plant. The BTP well head was in good condition with no signs of damage. The two North Hollywood Treatment Plant well heads were not operational, because the treatment system was not operating. There were no signs of damage at the North Hollywood Treatment Plant well heads.

4. ACTIONS

USACE will incorporate information obtained from the site visit into the Five-Year Review report.

Jeffrey Weiss
Geologist, Seattle District

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-13), the ASTM Standard Practice for Environmental Site Assessments for Forestland or Rural Property (E 2247-16), the ASTM Standard Practice for Limited Environmental Due Diligence: Transaction Screen Process (E 1528-14) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.

Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

EXECUTIVE SUMMARY

NPL: Also known as Superfund, the National Priority List database is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund program. The source of this database is the U.S. EPA.

A review of the NPL list, as provided by EDR, and dated 12/30/2020 has revealed that there is 1 NPL site within approximately 1 mile of the target property.

<u>Equal/Higher Elevation</u>	<u>Address</u>	<u>Direction / Distance</u>	<u>Map ID</u>	<u>Page</u>
SAN FERNANDO VALLEY Cerclis ID:: 902251 EPA Id: CAD980894893	NORTH HOLLYWOOD WELL	0 - 1/8 (0.000 mi.)	0	25

Federal CERCLIS list

SEMS: SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

A review of the SEMS list, as provided by EDR, and dated 12/30/2020 has revealed that there is 1 SEMS site within approximately 0.5 miles of the target property.

<u>Equal/Higher Elevation</u>	<u>Address</u>	<u>Direction / Distance</u>	<u>Map ID</u>	<u>Page</u>
SAN FERNANDO VALLEY Site ID: 0902251 EPA Id: CAD980894893	NORTH HOLLYWOOD WELL	0 - 1/8 (0.000 mi.)	0	25

Federal CERCLIS NFRAP site list

SEMS-ARCHIVE: SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be potential NPL site.

A review of the SEMS-ARCHIVE list, as provided by EDR, and dated 12/30/2020 has revealed that there are 4 SEMS-ARCHIVE sites within approximately 0.5 miles of the target property.

Federal RCRA CORRACTS facilities list

CORRACTS: CORRACTS is a list of handlers with RCRA Corrective Action Activity. This report shows which nationally-defined corrective action core events have occurred for every handler that has had corrective action activity.

A review of the CORRACTS list, as provided by EDR, and dated 12/14/2020 has revealed that there is 1 CORRACTS site within approximately 1 mile of the target property.

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

A review of the RCRA-TSDF list, as provided by EDR, and dated 12/14/2020 has revealed that there is 1 RCRA-TSDF site within approximately 0.5 miles of the target property.

EXECUTIVE SUMMARY

Federal RCRA generators list

RCRA-LQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

A review of the RCRA-LQG list, as provided by EDR, and dated 12/14/2020 has revealed that there are 6 RCRA-LQG sites within approximately 0.25 miles of the target property.

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 12/14/2020 has revealed that there are 31 RCRA-SQG sites within approximately 0.25 miles of the target property.

State- and tribal - equivalent CERCLIS

ENVIROSTOR: The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifies sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

A review of the ENVIROSTOR list, as provided by EDR, and dated 10/26/2020 has revealed that there are 19 ENVIROSTOR sites within approximately 1 mile of the target property.

State and tribal registered storage tank lists

UST: The Underground Storage Tank database contains registered USTs. USTs are regulated under Subtitle I of the Resource Conservation and Recovery Act (RCRA). The data come from the State Water Resources Control Board's Hazardous Substance Storage Container Database.

A review of the UST list, as provided by EDR, has revealed that there are 7 UST sites within approximately 0.25 miles of the target property.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Lists of Hazardous waste / Contaminated Sites

HIST Cal-Sites: Formerly known as ASPIS, this database contains both known and potential hazardous substance sites. The source is the California Department of Toxic Substance Control. No longer updated by the state agency. It has been replaced by ENVIROSTOR.

A review of the HIST Cal-Sites list, as provided by EDR, and dated 08/08/2005 has revealed that there is 1 HIST Cal-Sites site within approximately 1 mile of the target property.

Other Ascertainable Records

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 12/14/2020 has revealed that there are 30 RCRA NonGen / NLR sites within approximately 0.25 miles of the target property.

SAN FERNANDO VALLEY EPA ID:: CAD980894893	NORTH HOLLYWOOD WELL	0 - 1/8 (0.000 mi.)	0	25

CONSENT: Major Legal settlements that establish responsibility and standards for cleanup at NPL (superfund) sites. Released periodically by U.S. District Courts after settlement by parties to litigation matters.

A review of the CONSENT list, as provided by EDR, and dated 09/30/2020 has revealed that there is 1 CONSENT site within approximately 1 mile of the target property.

<u>Equal/Higher Elevation</u>	<u>Address</u>	<u>Direction / Distance</u>	<u>Map ID</u>	<u>Page</u>
SAN FERNANDO VALLEY	NORTH HOLLYWOOD WELL	0 - 1/8 (0.000 mi.)	0	25

CA BOND EXP. PLAN: Department of Health Services developed a site-specific expenditure plan as the basis for an appropriation of Hazardous Substance Cleanup Bond Act funds. It is not updated.

A review of the CA BOND EXP. PLAN list, as provided by EDR, and dated 01/01/1989 has revealed that there is 1 CA BOND EXP. PLAN site within approximately 1 mile of the target property.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR Hist Auto: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Auto list, as provided by EDR, has revealed that there are 5 EDR Hist Auto sites within approximately 0.125 miles of the target property.

SAN FERNANDO VALLEY (AREA 1) (Continued)

1000709322

Scoring: 2

Summary Details:

Conditions at proposal October 15, 1984): San Fernando Valley Area 1) is an area of contaminated ground water in the vicinity of the North Hollywood section of the City of Los Angeles, Los Angeles County, California. This area is part of the San Fernando Valley Basin, a natural underground reservoir that represents an important source of drinking water for at least 3 million people in the Los Angeles metropolitan area. The contaminated ground water, which underlies an area of approximately 5,156 acres, contains trichloroethylene (TCE) and perchloroethylene (PCE), and to a lesser extent, carbon tetrachloride and chloroform, according to analyses conducted by the California Department of Health Services, as well as numerous local government agencies. The State s recommended drinking water guideline for TCE and PCE (5 and 4 parts per billion respectively) are exceeded in a number of public wells in this area. To alleviate this contamination, wells are either taken out of service or blended with water from clean sources to ensure that the public receives water with TCE/PCE concentrations below the State s guidelines. Status June 10, 1986): EPA and the Los Angeles Department of Water and Power are entering into a cooperative agreement for a remedial investigation of the San Fernando Valley Basin and a feasibility study targeted at Area 1, the most contaminated area. The RI is scheduled to begin in early 1986.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: 5 Year Review Reports
Completed Date: 08/17/1998
Comments: A second 5-year review of remedial activities is conducted at the North Hollywood OU (NHOU) and covers operations from 1993 thru 1997. The purpose was to evaluate whether the NH Interim Remedy achieved the objectives specified in the ROD. The findings of the 5-year review are that the objectives of the ROD have been met.

Background Info: The San Fernando Valley Ground Water Basin (SFVGWB) is located within the Upper Los Angeles River Area, and consists of the eastern portion of the San Fernando Valley and the entire Verdugo Basin. The SFVGWB encompasses approximately 112,000 acres of alluvial valley fill deposits and provides enough water to serve

MAP FINDINGS

SAN FERNANDO VALLEY (AREA 1) (Continued)

1000709322

approximately 600,000 residents. The Basin is bounded on the north and the northwest by the Santa Susana Mountains, on the northeast by the San Gabriel Mountains, on the west by the Simi Hills and on the south by the Santa Monica Mountains.

The San Fernando Valley Study area includes four National Priorities List (NPL) sites. They are:

Area #1 - North Hollywood NPL Site covers 9336 acres in the eastern part of the San Fernando Valley. The site has been divided into the North Hollywood Operable Unit(OU) and the Burbank OU.

Area #2 - Crystal Springs NPL Site covers 3975 acres located southeast of the North Hollywood NPL site and is in the cities of Glendale and Los Angeles.

Area #3 - Verdugo NPL Site covers 2673 acres in the eastern part of the SF Valley and is located in and adjacent to La Crescenta in the Verdugo Mountains.

Area #4 - the Pollock NPL Site covers 1635 acres in the south-eastern part of the San Fernando Valley and is located in and adjacent to the cities of Los Angeles and Glendale.

Groundwater contamination in the SFVGB is linked to prewar, postwar, and current industrialization in the San Fernando Valley.

The primary contaminants of concern are the volatile organic compounds (VOCs) trichloroethylene (TCE) and tetrachloroethylene (PCE). These compounds have been and/or are being used in many San Fernando Valley industries, such as aeronautical, automotive dry cleaning, and metal plating. These solvents have found their way to the groundwater basin as a result of both past and improper use, storage and disposal practices. The SFVGB Superfund sites, added to the NPL in 1986, are areas where groundwater from wells have been found to contain VOCs above the state and federal drinking water standards. Groundwater contamination in numerous wells have been so severe with TCE and PCE that these wells have essentially been put out of commission.

Exposure of receptors to contaminants can possibly occur through ingestion of contaminated drinking water, inhalation of VOC vapors released from the contaminated water as in taking showers, and dermal exposure as in washing or bathing. However, with the strict regulatory control over water quality by the State's Department of Health, Office of Drinking Water (ODW), the RWQCB, and other agencies, residents are assured that the water they consume is safe and that no one is drinking water which contains concentrations of contaminants above regulatory standards. Federal, state, and local agencies have been conducting investigations and cleanup of contaminated groundwater in the San Fernando Valley since contamination was discovered in 1979. These activities involve measuring the extent of contamination, developing and implementing cleanup remedies, and identifying responsible parties.

EPA provided oversight of the basinwide Remedial Investigation (RI) of groundwater contamination conducted by the Los Angeles Department of Water and Power (LADWP). The RI objectives were to collect lithological and water quality data and information regarding basin operations for the eastern SF and Verdugo basins; develop a regional characterization of geology, hydrology, hydrogeology and the nature and extent of groundwater contamination within the eastern and Verdugo basins; study fate

and transport of compounds in the environment; identify Applicable or Relevant and Appropriate Requirements; (ARAR's) and evaluate the potential risk to human health and the environment. The Remedial Investigation of the SFVGWB was divided into two phases.

Phase I activities have included vertical profile borings and installation of monitoring wells to obtain preliminary contamination information. Monitoring wells have been installed as follows: 34 in North Hollywood (Area #1); 29 in Crystal Springs (Area #2); 7 in Verdugo (Area #3); and 17 in Pollock (Area #4).

Information obtained from Phase I investigation activities identified the need for several operable units. Operable Unit is a federal term which is similar to the State's definition of a removal action.

Phase II activities consist of a basinwide remedial investigation conducted by the LADWP.

Remedial Actions (RAs):

North Hollywood (Area #1) -- Two RAs were identified for Area #1, the North Hollywood OU and the Burbank OU.

A Record of Decision (ROD) for the North Hollywood RA was signed in September 1987, selecting groundwater extraction and treatment (air stripping) of 2,000 gallons per minute (gpm) of contaminated water as an interim remedy. This RA was constructed with funding from EPA and the State and has been treating contaminated groundwater since March 1989. This facility is located at 11845 Vose Street in the N. Hollywood section of Los Angeles.

A ROD for the Burbank OU was signed in June 1989, again selecting groundwater extraction and treatment of about 12,000 gpm of contaminated water. Phase I of the Burbank OU began operations in January 1996 treating groundwater at a rate of 6,000 gpm. Phase II began operations in May 1998 adding an additional 3,000 gpm to the Burbank OU's treatment capacity.

Crystal Springs (Area #2) -- LADWP has completed a focused RI/FS for this proposed RA. The Glendale OU has been separated into a North OU and a South OU based on the amount of contamination and the facilities contributing to the GW contamination. A ROD for each OU was signed on June 18, 1993 designating groundwater extraction and treatment as the interim remedy. The PRPs have formed a group and combined the RA efforts for each OU into one document. The selected alternative is GW extraction and treatment. The Glendale OU began operations in September 2000.

Verdugo and Pollock (Areas #3 and #4) --

Currently no RAs have been identified for Area #3 or for Area #4. In October 2003 US EPA proposed No Remedial Action for Verdugo Basin (Area #3).

Another contaminant of concern, hexavalent chromium, has been identified in the San Fernando Valley Groundwater Basin.

EPA and the RWQCB are currently identifying potential sources of contamination and pursuing PRPs that may be responsible for contaminating groundwater. As these PRPs are identified, individual site investigations and mitigation activities will be pursued. Enforceable agreements and orders will be

Environmental Interest/Information System:

California Department of Toxic Substances Control EnviroStor System (DTSC-EnviroStor) is an online search and Geographic Information System (GIS) tool for identifying sites that have known contamination or sites for which there may be reasons to investigate further. The EnviroStor database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites.

SUPERFUND NPL

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and its Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

 File Location: Regional Board
 Potential Media Affected: Aquifer used for drinking water supply
 Potential Contaminants of Concern: Not reported
 Site History: Site assessments indicated elevated concentrations of PCE and TCE in the vadose zone in the northwest portion of the site near a former AST. An NFR letter was issued on November 16, 1995 excluding the VOC-contaminated northwest area. An SVE system operated intermittently between 1997 and 2002. PCE, TCE, and 1,1-DCE were significantly reduced compared to baseline concentrations and asymptotic conditions were attained. VLEACH modeling indicated that residual VOCs will not further degrade groundwater quality beneath the site. The Regional Board issued an NFR for soils letter on February 7, 2003. LMC monitors and treats the groundwater in the BOU on an ongoing basis with oversight by USEPA.

LOCKHEED-BURBANK PLANTS A-1, B-1, B-6 & C-1
2555 NO. HOLLYWOOD WAY
BURBANK, CA 91520
Site 6 of 15 in cluster B

CA BOND EXP. PLAN S100833478
N/A

Relative:
Higher
Actual:
679 ft.

CA BOND EXP. PLAN:
 Responsible Party: RWQCB REFERRAL SITE
 Project Revenue Source Company: Not reported
 Project Revenue Source Addr: Not reported
 Project Revenue Source City,St,Zip: Not reported
 Project Revenue Source Desc: The PRP is providing for the remediation of the site under RWQCB lead and will pay all costs associated with site cleanup. There are no current plans for expenditure of Bond funds for the site.
 Site Description: The site is the location of an aircraft manufacturing facility constructed in the late 1930's and early 1940's. Operational activities include aircraft research, manufacturing and maintenance. Hazardous materials which are used at the facility include plating solutions, acids, fuels, and solvents.
 Hazardous Waste Desc: The facility overlies the San Fernando Valley Ground Water Basin. Analysis of monitoring wells on the facility and downgradient has revealed contamination of the ground water by perchloroethylene (PCE) and trichloroethylene (TCE). Concentrations of PCE vary from approximately 20 to 12,000 parts per billion (ppb) and from approximately 20 to 1,600 ppb for TCE. Other compounds detected at low levels are acetone, chloroform, methyl ethyl ketone, chlorobenzene, ethylbenzene, and benzene.
 Threat To Public Health & Env: The contaminated aquifer is a major source of drinking water for the city. Wells downgradient have been shut down due to contamination from this or other sources. If the contamination migrates further offsite, additional wells may become contaminated, thus leading to a reduction in water quality and potential long-term loss of water supply.
 Site Activity Status: The potentially responsible party (PRP) has installed ground water monitoring wells and is currently working under the direction of the Regional Water

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

[Click this hyperlink](#) while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System:

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.

US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Treat To Water: Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
Complexity: Category C - Facilities having no waste treatment systems, such as cooling water dischargers or those who must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System:

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

(uses other than drinking water), Soil, Soil Vapor, Under Investigation

Potential Contaminants of Concern: Not reported
Site History:

After reviewing (1) Vapor Extraction System Operation Report dated December 19, 2008, and (2) Temporary VES Operation Report & Closure Borings Workplan dated August 12, 2009, Regional Board staff M. Zaidi had a meeting on 11/10/2009 with the RP and staff of The Source Group at the site. Mike Wood of the Source Group sent an email to Mr. Zaidi summarizing the meeting notes, which were reviewed and amended by Mr. Zaidi and sent back to Mr. Wood in an email dated 11/25/09. After collecting soil gas samples from the wells, The Source Group will submit a technical report after receiving the analytical results of the soil gas samples to the Regional Board staff for their review. The RP consultant has collected soil gas samples for a rebound test on 2/19/2010, and plans to drill two confirmation soil borings in March 2010. Regional Board staff issued a No Further Requirements for Soil Only letter dated 3/30/11 for the Former Premier Cleaners site. The Site was found to be an open lot during staff's site inspection in 2010.

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System:

US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

HAZARDOUS AIR POLLUTANT MAJOR

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

STATE MASTER

HAZARDOUS WASTE BIENNIAL REPORTER

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region

facilities.
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Violation Date: 09-04-2014
Citation: HSC 6.5 25250.7 - California Health and Safety Code, Chapter 6.5, Section(s) 25250.7
Violation Description: Failure to handle contaminated used oil (other than minimal amounts of vehicle fuel) as a hazardous waste.
Violation Notes: Returned to compliance on 09/04/2014. Manager had started CERS submission but was unable to submit because TP forms were not populating properly. CERS submitted during inspection.
Violation Division: Los Angeles County Fire Department
Violation Program: HW
Violation Source: CERS

Site ID: 58913
Site Name: PROCESS CONTROL LABS
Violation Date: 02-22-2019
Citation: 22 CCR 45 67450.3(c)(9)(F) - California Code of Regulations, Title 22, Chapter 45, Section(s) 67450.3(c)(9)(F)
Violation Description: Failure to meet secondary containment requirements for hazardous waste tank systems or components.
Violation Notes: OBSERVATION: The Owner/Operator failed to meet the requirements for designing, installing and operating a secondary containment system for the HW tank system. An Owner/Operator shall design, install and operate a secondary containment system to prevent any migration of wastes or accumulated liquid out of the system to the soil, ground water, or surface water at any time during the use of the HW tank system. Filter press on a cart and not within a secondary containment. Treatment tank not fully within secondary containment CORRECTIVE ACTION: A plan for designing, installing and/or modifying to meet the requirements and operating a HW tank secondary containment system must be submitted to the CUPA for review.

Citation: 22 CCR 45 67450.3(c)(9)(F) - California Code of Regulations, Title 22, Chapter 45, Section(s) 67450.3(c)(9)(F)
Violation Description: Failure of generator to obtain assessment or reassessment every five (5) years or the remaining service life of the tank system, as stated in the engineer's assessment, whichever is less. This assessment applies to onground or aboveground tank systems containing only non-RCRA hazardous wastes generated onsite, and tank systems authorized under Permit-by-Rule, Conditional Authorization, and Conditional Exemption or for a small quantity generator onground or aboveground tank systems containing RCRA hazardous wastes generated onsite.
Violation Notes: OBSERVATION: Owner/Operator failed to obtain assessment or reassessment every five (5) years or the remaining service life of the hazardous waste treatment tank system, as stated in the engineer's assessment, whichever is less. CORRECTIVE ACTION: Obtain assessment or reassessment of the hazardous waste treatment tank system pursuant to 22 CCR 66265.192, completed by a professional engineer.

Violation Description: Failure to maintain the required documents at the facility for a minimum of three years from the last date of any activity and made available to authorized representatives of the Department, the CUPA, or the U.S. EPA.

Violation Notes: Returned to compliance on 02/22/2019. OBSERVATION: The Owner/Operator failed to maintain cyanide treatment records at the facility for three years. Owners or Operators shall ensure that the following records are maintained at the facility for a minimum of three years from the last date of any activity: written approval from the agency operating the POTW receiving the facility's discharges, a written method documented in the waste analysis plan for ensuring that the concentration of total cyanide does not exceed 5000 milligrams per liter in the aqueous waste resulting from mixing, and documentation that the residual solids generated by treatment have been sent offsite for metals recovery or reclamation, or determined to be not amendable for recycling. CORRECTIVE ACTIONS: Ensure that the cyanide treatment records, as listed in this section, are maintained at the facility for a minimum of three years. Submit copies of supporting documentation that demonstrates compliance with this requirement to the CUPA.

Violation Notes: authorization, or conditional exemption permit from the CUPA.
OBSERVATION: The owner or operator failed to obtain a permit to treat HW. No owner or operator of a storage facility, treatment facility, transfer facility, resource recovery facility, or disposal site shall accept, treat, store, or dispose of HW at the facility, area, or site, unless the owner or operator holds a HW facilities permit or other grant of authorization from the DTSC to use and operate the facility, area, or site, or the owner or operator is operating under a permit-by-rule pursuant to the DTSC's regulations, or a grant of conditional authorization or conditional exemption pursuant to this chapter. No permit for cyanide rinse water treatment, tank BT#02.
CORRECTIVE ACTIONS: Immediately obtain a permit to treat HW by permit-by-rule, conditional authorization, or conditional exemption for this facility issued from the CUPA.

S106484436

Violation Description: 6.5, Section(s) 25201.5(d)(6)
Failure of the generator to prepare and maintain onsite, for a period of three years, the following: (1) adequate records to demonstrate compliance with all applicable pretreatment standards and discharge requirements issued by the agency operating the POTW; (2) records of the dates, concentrations, amounts, and types of waste treated; and (3) written operating instructions.

Violation Notes: Returned to compliance on 02/22/2019. OBSERVATION: Records for conducting hazardous waste treatment were not maintained onsite for three years. No records of Chrome reduction waste treatment. CORRECTIVE ACTION: Begin maintaining records for hazardous waste treatment and ensure that they are kept onsite for three years. Submit copies of these records to the CUPA.

Environmental Interest/Information System:

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

AIR EMISSIONS CLASSIFICATION UNKNOWN
California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click Here:

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.
